WARNING

Improper installation, adjustment, alteration, service or maintenance can cause property damage, personal injury or loss of life.

Installation and service must be performed by a licensed professional HVAC installer (or equivalent) or service agency

1. Outdoor Unit Indicators and Controls

1.1. Multi-Zone Outdoor Unit Spot Check Function

There is a check switch on the outdoor control board. Push the switch labelled SW1 to check the status of unit when the unit is running. The two-digit display will provide the following status indicators (see table 1) each time the SW1 switch is pushed.

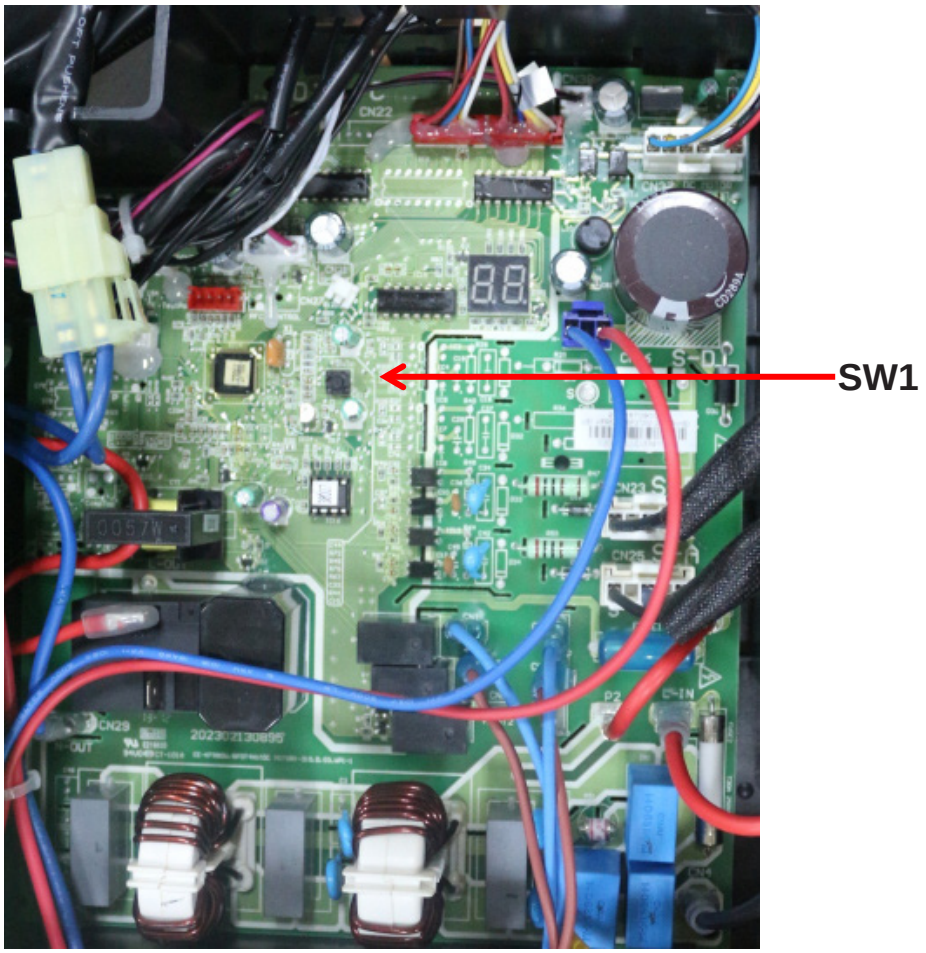

Figure 1. SW1 Location

Table 1. Status Indicators

	Display	Remark		
0	Normal Display	Display running frequency, running state or malfunction code		
1	Number of connected indoor units	Actual data		
			Display	Number of indoor units
			1	one
			2	two
			3	three
			4	four
			5	five
2	Outdoor unit running mode	Off: 0, Fan only: 1, Cooling: 2, Heating: 3, Forced cooling: 4		

Table 1. Status Indicators

	Display	Remark
3	Indoor unit A capacity	The capacity unit is horsepower. If the indoor unit is not connected, the digital display tube will show: "——" (9K:1HP,12K:1.2HP,18K:1.5HP)
4	Indoor unit B capacity	
5	Indoor unit C capacity	
6	Indoor unit D capacity	
7	Indoor unit E capacity	
8	Indoor unit A capacity demand code	Norm code*HP (9K:1HP,12K:1.2HP,18K:1.5HP)
9	Indoor unit B capacity demand code	
10	Indoor unit C capacity demand code	
11	Indoor unit D capacity demand code	
12	Indoor unit E capacity demand code	
13	Outdoor unit amendatory capacity demand code	Forced cooling:7
14	The frequency corresponding to the total indoor units amendatory capacity demand	
15	The frequency after the frequency limit	
16	The frequency sending to compressor control chip	
17	Indoor unit A evaporator outlet temp.(T2BA)	• If the temperature is lower than -9 degrees, the two-digit display will show "-9". • If the temperature is higher than 70 degree, the two-digit display will show "70". • If the indoor unit is not connected, the two-digit display will show: "——"
18	Indoor unit B evaporator outlet temp.(T2BB)	
19	Indoor unit C evaporator outlet temp.(T2BC)	
20	Indoor unit D evaporator outlet temp.(T2BD)	
21	Indoor unit E evaporator outlet temp.(T2BE)	
22	Indoor unit A room temp.(T1A)	• If the temperature is lower than 0 degree, the two-digit display will show "0". • If the temperature is higher than 50 degree, the two-digit display will show "50". • If the indoor unit is not connected, the two-digit display will show: "——"
23	Indoor unit B room temp.(T1B)	
24	Indoor unit C room temp.(T1C)	
25	Indoor unit D room temp.(T1D)	
26	Indoor unit E room temp.(T1E)	
27	Indoor unit A evaporator temp.(T2A)	• If the temperature is lower than -9 degree, the two-digit display will show "-9". • If the temperature is higher than 70 degree, the two-digit display will show "70". • If the indoor unit is not connected, the digital display tube will show: "——"
28	Indoor unit B evaporator temp.(T2B)	
29	Indoor unit C evaporator temp.(T2C)	
30	Indoor unit D evaporator temp.(T2D)	
31	Indoor unit E evaporator temp.(T2E)	
32	Condenser pipe temp.(T3)	
33	Outdoor ambient temp.(T4)	
34	Compressor discharge temp.(TP)	• The display value should be between 30 and 129 degrees. • If the temperature is lower than 30 degree, the two-digit display will show "30". • If the temperature is higher than 99 degree, the two-digit display will show single digit and tens digit. ***NOTE:*** *For example, the two-digit display show "0.5",it means the compressor discharge temp. is 105 degree.)*
35	AD value of current	The display value is hex number. ***NOTE:*** *For example ,the two-digit display show "Cd", it means AD value is 205.*
36	AD value of voltage	
37	EXV open angle for indoor unit A	• Actual data/4. • If the value is higher than 99, the two-digit display will show single digit and tens digit. ***NOTE:*** *For example ,the two-digit display show "2.0",it means the EXV open angle is 120×4=480p.)*
38	EXV open angle for indoor unit B	
39	EXV open angle for indoor unit C	
40	EXV open angle for indoor unit D	
41	EXV open angle for indoor unit E	

Table 1. Status Indicators

	Display	Remark		
42	Frequency limit symbol	Bit7	Frequency limit caused by IGBT radiator	The display value is a hex number. ***NOTE:*** *For example, the digital display tube shows 2A,then Bit5=1, Bit3=1, Bit1=1.* It means frequency limit caused by T4, T3 and current.
		Bit6	Frequency limit caused by PFC	
		Bit5	Frequency limit caused by T4.	
		Bit4	Frequency limit caused by T2.	
		Bit3	Frequency limit caused by T3.	
		Bit2	Frequency limit caused by T5.	
		Bit1	Frequency limit caused by current	
		Bit0	Frequency limit caused by voltage	
43	Average value of T2	(Sum T2 value of all indoor units)/(number of indoor units in good connection)		
44	Outdoor unit fan motor state	Off:0, High speed:1, Med speed:2, Low speed:3 Breeze:4, Super breeze:5		
45	The last error or protection code	00 means no malfunction and protection		
46	Indoor unit F capacity	Not used		
47	Indoor unit F capacity demand code	Not used		
48	Indoor unit F evaporator outlet temp.(T2BF)	Not used		
49	Indoor unit F room temp.(T1F)	Not used		
50	Indoor unit F evaporator temp.(T2F)	Not used		
51	EXV open angle for F indoor unit	Not used		

1.2. Multi-Zone Outdoor Digital Display

There is a two-digit display on the outdoor unit control board. The following are the code descriptions:

Table 2. Multi-Zone Outdoor Unit Error Codes

Display Code	Description
	In protection or malfunction, the LED displays error code or protection code.
	In compressor operation, the LED display the running frequency,
--	Outdoor unit - standby mode for single zone. The LED displays “- -”
--	Multi zone mode conflict - - (dash dash) indoor display or operation lamp Flashes 6 times, timer lamp Flashing, - - display
dF	In defrosting mode, the LED displays “dF” or alternative displays between running frequency and “dF”(each displays 0.5s)
PH	In compressor pre-heating, The LED displays “PH” or alternative displays between running frequency and “PH”(each displays 0.5s)
RO	During the oil return process, The LED displays “RO” or alternative displays between running frequency and “RO”(each displays 0.5s)
LC	In low ambient cooling mode, the LED displays “LC” or alternative displays between running frequency and “LC”(each displays 0.5s)
FC	In forced cooling mode, the LED displays “FC” or alternative displays between running frequency and “FC”(each displays 0.5s)
E6	When PFC module protection occurs three times within 15 minutes, the LED displays “E6” or alternative displays between running frequency and “E6”(each displays 0.5s)
CP	When the LED displays CP, this indicates the J1 jumper removed or loose or the remote on / off switch is activated.
CL	When the LED displays CL, this is a reminder to check and clean the air filter.
NF	When the LED displays NF, this indicates 2880 hour filter replacement reminder. To clear press the LED button 5 times within 15 seconds when the CL or NF shows to reset and clear code.
CF	CF anti-cold blow. Fan will stay Off on call for heat unit indoor coil warms up to 90°F or above.
FP	Freeze protection. The silence (FP) button was pushed and held for more than three seconds. Temperature will hold at 46°F until returned to normal operation.

1.3. Multi-Zone Error Codes

Table 3. Multi-Zone Outdoor / Indoor Unit Error Codes Matches

Display	LED Status	New Indoor Error
E0	Outdoor unit EEPROM parameter error	F4
E2	Communication malfunction between indoor and outdoor units	E1
E3	Communication malfunction between IPM board and outdoor main control board	——
E4	Outdoor temperature sensor (coil sensor T3,ambient sensor T4, Compressor discharge sensor T5 indoor coil outlet pipe sensor T2B) malfunction	F2/F1/F3/F6
E5	Over-voltage or under-voltage protection	P1
E6	PFC module protection	——
E8	Outdoor fan speed malfunction	F5
F1	No. A Indoor unit coil outlet temperature sensor malfunction	——
F2	No. B Indoor unit coil outlet temperature sensor malfunction	——
F3	No. C Indoor unit coil outlet temperature sensor malfunction	——
F4	No. D Indoor unit coil outlet temperature sensor malfunction	——
F5	No. E Indoor unit coil outlet temperature sensor malfunction	——
F6	No. F Indoor unit coil outlet temperature sensor malfunction	——
P1	High pressure protection	P6
P2	Low pressure protection	P6
P3	Current overload protection	F0
P4	Temperature protection of compressor discharge	——
P5	Condenser high temperature protection	——
P6	Inverter module (IPM) malfunction	P0
LP	Low ambient temperature protection	——

Table 4. Multi-Zone Indoor Unit Error Codes

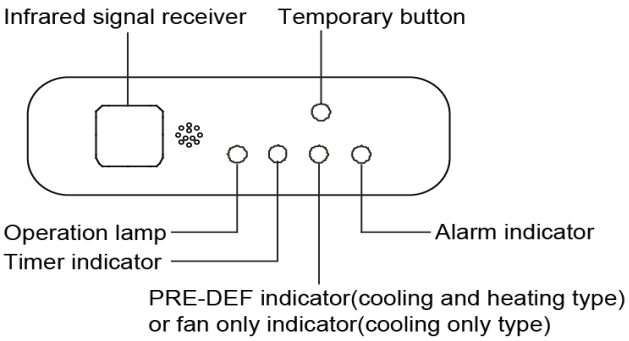
Display	Error Description
E0	Outdoor unit EEPROM error.
E2	Communication error between outdoor unit and all indoor units.
E3	Communication error between outdoor unit main control and IPM control.
E4	Temperature sensor error (outdoor coil, outdoor ambient , compressor discharge and indoor unit coil outlet temperature sensors.
E5	High and low voltage protection.
E8	Outdoor DC fan speed error.
F1	Indoor unit #1 coil outlet temperature sensor error.
F2	Indoor unit #2 coil outlet temperature sensor error.
F3	Indoor unit #3 coil outlet temperature sensor error.
F4	Indoor unit #4 coil outlet temperature sensor error.
F5	Indoor unit #5 coil outlet temperature sensor error.
F6	Indoor unit #6 coil outlet temperature sensor error.
P1	High pressure switch open
P2	Low pressure switch open
P3	Outdoor compressor current overload sensed.
P4	High temperature sensed at compressor discharge line.
P5	High temperature sensed at outdoor coil.
P6	Inverter module (IPM) error.

2. Indoor Unit Indicators and Controls

For a list of applicable error codes for the indoor units, refer to “3. Single Zone - Indoor and Outdoor Error Codes” on page 9. All indoor units provide error code information with either a digital LED display or with Flash codes.

2.1. Cassette Unit Display (M22A, M33A & M33B)

M0STAT62Q-1



M0STAT63Q-1

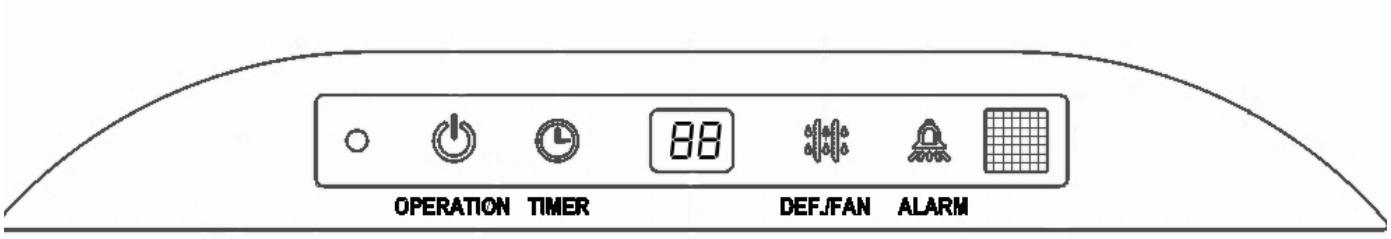


Table 5. Cassette Displays

2.2. Ducted Unit Display (MMDA & MMDB)

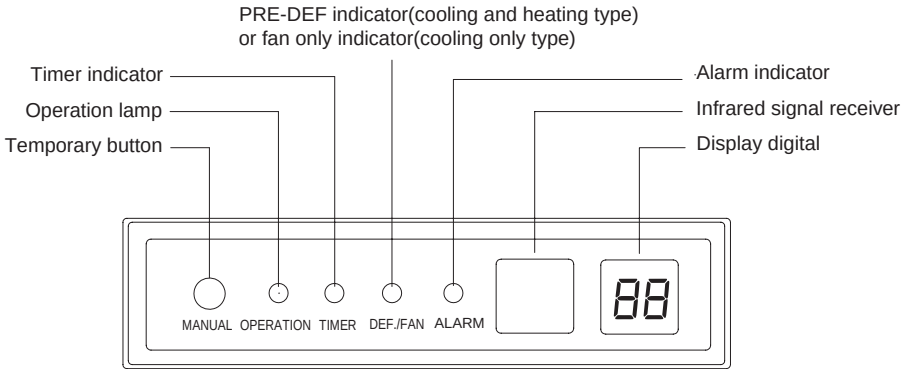

Figure 2. Ducted Unit Display

Wall-Mounted (MWMA, MWMB & 3WMB) and Ceiling/Floor (MCFA & MCFB) Unit Displays

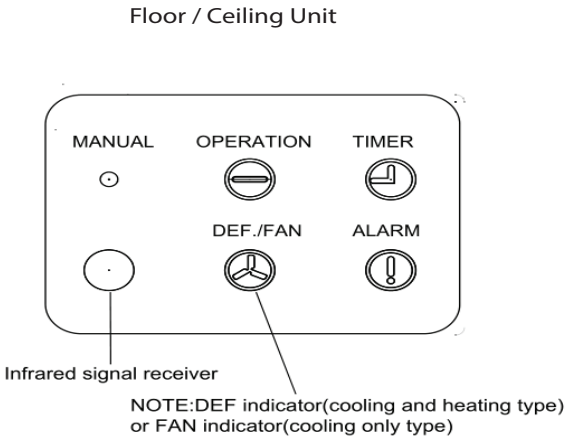

Figure 3. Wall-Mounted Unit Display

3. Single Zone - Indoor and Outdoor Error Codes

Table 6. Single-Zone 009/012 115VAC/208-230VAC

LED Display (LED 1: Blue/Red)	Error Description
Slow Flash	Standby
On	Normal operation
Flash Flash	Outdoor unit error.
Slow Flash -- Flashing at 1Hz. Flash Flash - Flashing at 2Hz.	

Table 7. Single-Zone 018/030 208-230VAC

Main Control	IPM Control (comp. driver)		Error Description
Blue or Yellow LED	Red LED	Green LED	
Slow Flash	Off	ON	Stand-by
ON	ON	Off	Normal operation
Flash Flash	Off	ON	Could be one of the following: • Indoor and outdoor unit communication error. • Outdoor unit temperature sensor error. • Outdoor unit EEPROM error • Compressor top temperature switch is open.
Flash Flash	ON	ON	DC bus voltage is too high or to low protection.
Flash Flash	Flash Flash	ON	Driver EEPROM error.
Flash Flash	Flash Flash	Off	Driver chip start-up failure.
Flash Flash	ON	Flash Flash	Could be one of the following: • Driver phase loss protection • Driver zero speed protection • PWM synchronization failure.
Flash Flash	Off	Flash Flash	IGBT over-current or IPM over-current
Flash Flash	Flash Flash	Flash Flash	Control chip communication error.
Slow Flash - Flashing at 1Hz and Flash Flash- Flashing at 2Hz			

Table 8. Indoor Unit Fault Codes (09K through 36K Wall-Mounted Units)

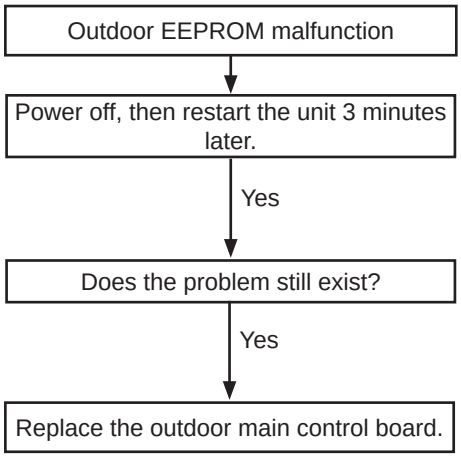
Running Light Short Flashes	State of Timer Light	Display	Description
1 time	Off	E0	Indoor unit EEPROM error
2 times	Off	E1	Communication error between indoor and outdoor units (E2 for outdoor code)
4 times	Off	E3	Indoor fan speed error
5 times	Off	E4	Indoor return air temperature sensor error
6 times	Off	E5	Indoor coil temperature sensor error
7 times	Off	EC	Low refrigerant
8 times	Off	EE	High water level alarm.
1 time	ON	F0	Outdoor current overload sensed. Note: (outdoor unit display --) two dashes
2 times	ON	F1	Outdoor ambient temperature sensor error (T4 malfunction) outdoor unit display E4
3 times	ON	F2	Outdoor coil temperature sensor error (T3) Malfunction outdoor unit display E4
4 times	ON	F3	Compressor discharge temperature sensor error (T5) Malfunction outdoor unit display E4
5 times	ON	F4	Outdoor unit EEPROM error - outdoor display E0
6 times	ON	F5	Outdoor unit fan speed error - outdoor Error display E8
1 time	Flash	P0	Inverter module IPM error - outdoor display P6
2 times	Flash	P1	High or low voltage protection - outdoor display E5
4 times	Flash	P3	Outdoor unit low temperature lockout - outdoor unit display LP
5 times	Flash	P4	Compressor drive error
6 times	Flash	--	Mode conflict
7 times	Flash	P6	Multi-Zone compressor high- or low-pressure switch open - outdoor unit display P2

Table 9. Indoor Unit Fault Codes (09K through 48K Cassette, Ducted and Ceiling/Floor Units)

Running Light Short Flashes	State of Timer Light	Display	Description
1 time	Off	E0	Indoor unit EEPROM error
2 times	Off	E1	Communication error between indoor and outdoor units (E2 for outdoor code)
4 times	Off	E3	Indoor fan speed error
5 times	Off	E4	Indoor return air temperature sensor error
6 times	Off	E5	Indoor coil temperature sensor error
7 times	Off	EC	Low refrigerant
8 times	Off	EE	High water level alarm (ducted and cassette units with factory pumps)
1 time	ON	F0	Outdoor current overload sensed Note: (outdoor unit display --) two dashes
2 times	ON	F1	Outdoor ambient temperature sensor error (T4 malfunction) outdoor unit display E4
3 times	ON	F2	Outdoor coil temperature sensor error (T3) Malfunction outdoor unit display E4
4 times	ON	F3	Compressor discharge temperature sensor error (T5) Malfunction outdoor unit display E4
5 times	ON	F4	Outdoor unit EEPROM error - outdoor display E0
6 times	ON	F5	Outdoor unit fan speed error - outdoor Error display E8
1 time	Flash	P0	Inverter module IPM error - outdoor display P6
2 times	Flash	P1	High or low voltage protection - outdoor display E5
4 times	Flash	P3	Outdoor unit low temperature lockout - outdoor unit display LP
5 times	Flash	P4	Compressor drive error
7 times	Flash	P6	Mode conflict
8 times	Flash	P7	Multi-Zone compressor high- or low-pressure switch open - outdoor unit display P2

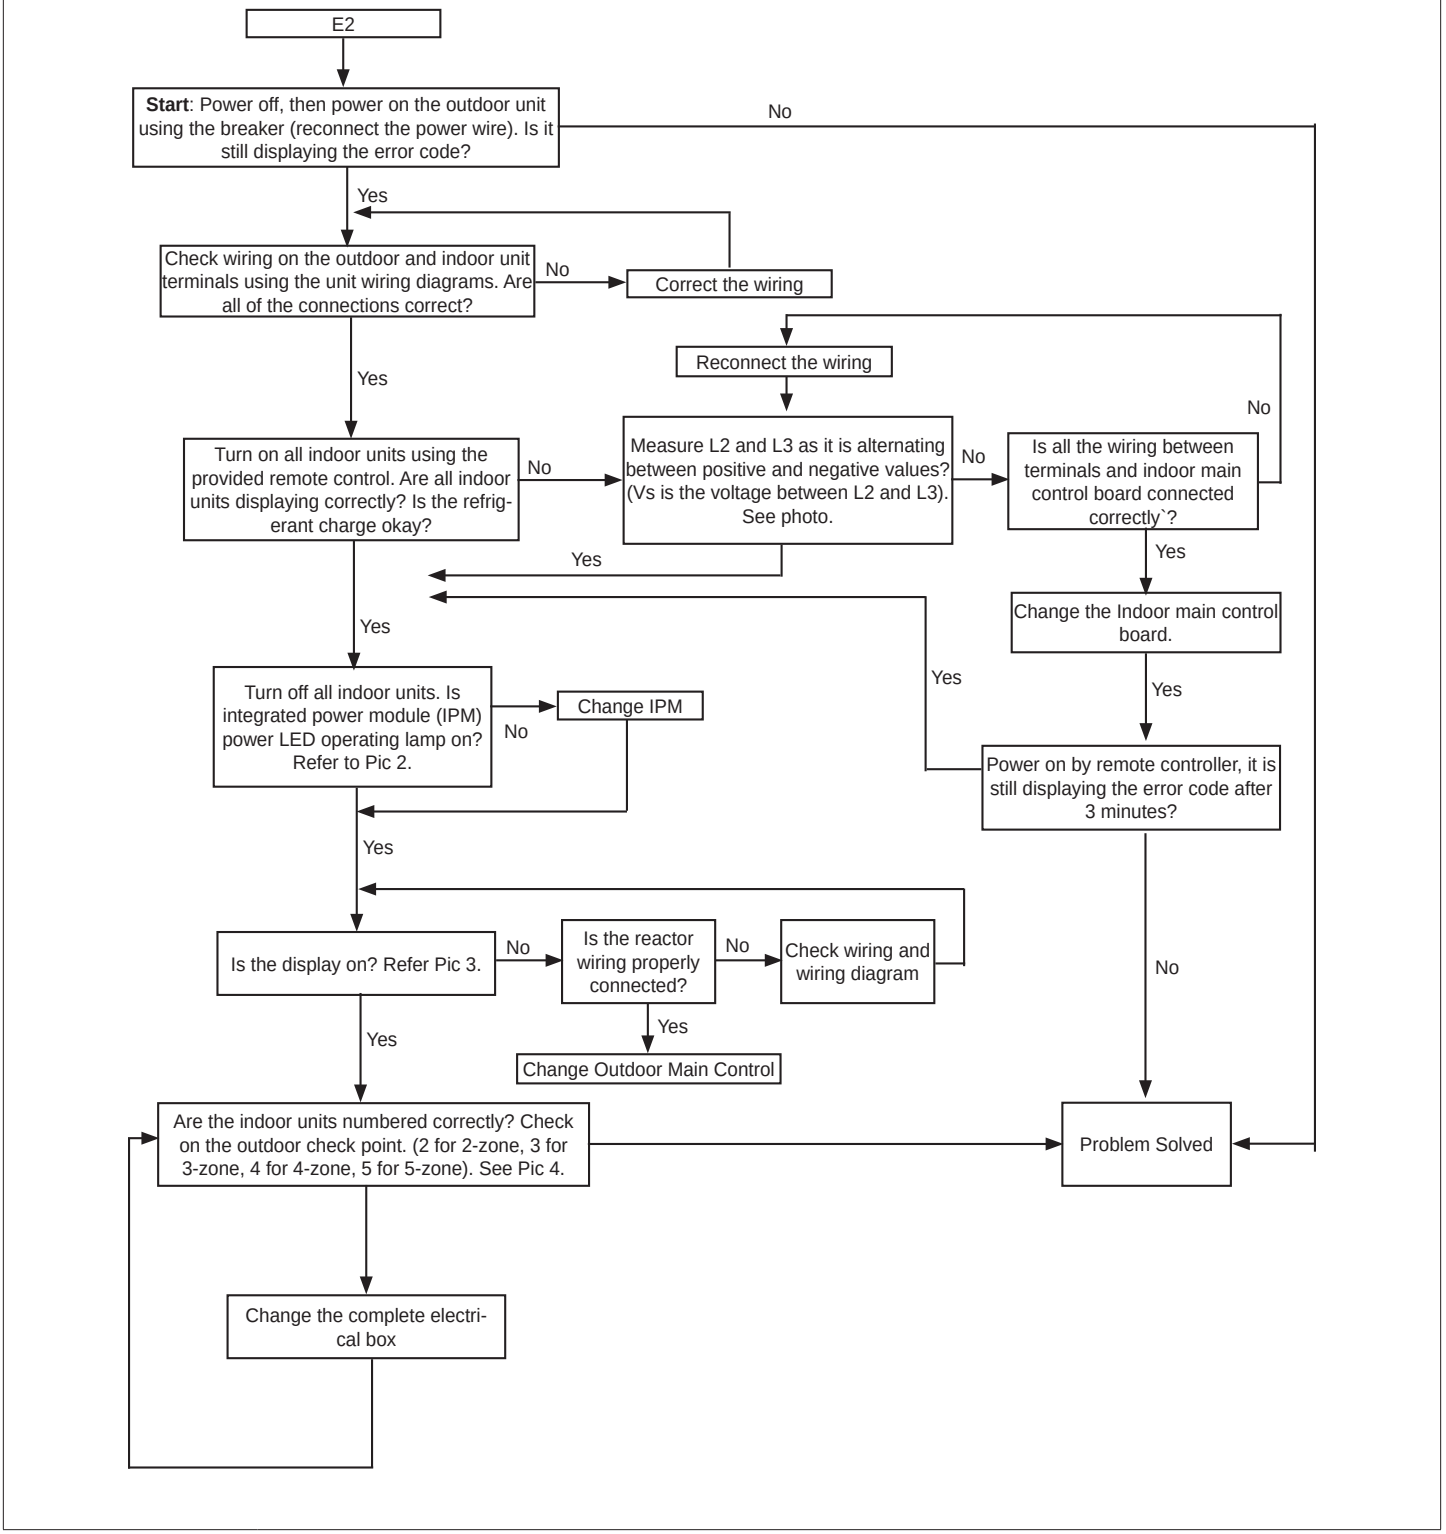
4. Extended Reference Guide - Outdoor Unit Error Codes

4.1. Error Code: E0

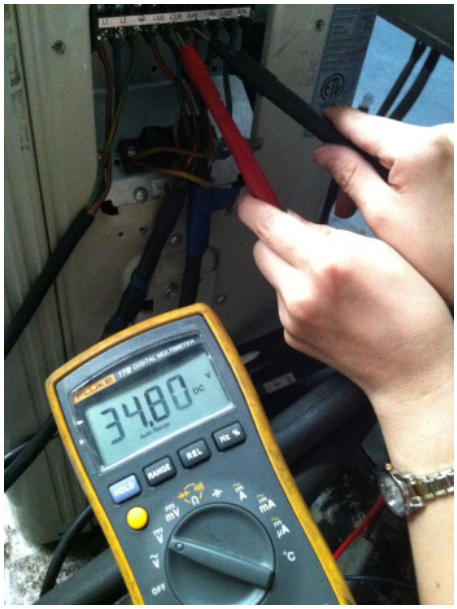
Description:	Outdoor EEPROM malfunction.
General Note:	Outdoor unit main control board chip is not receiving feedback from EEPROM chip.
	


4.2. Error Code: E1 / E2

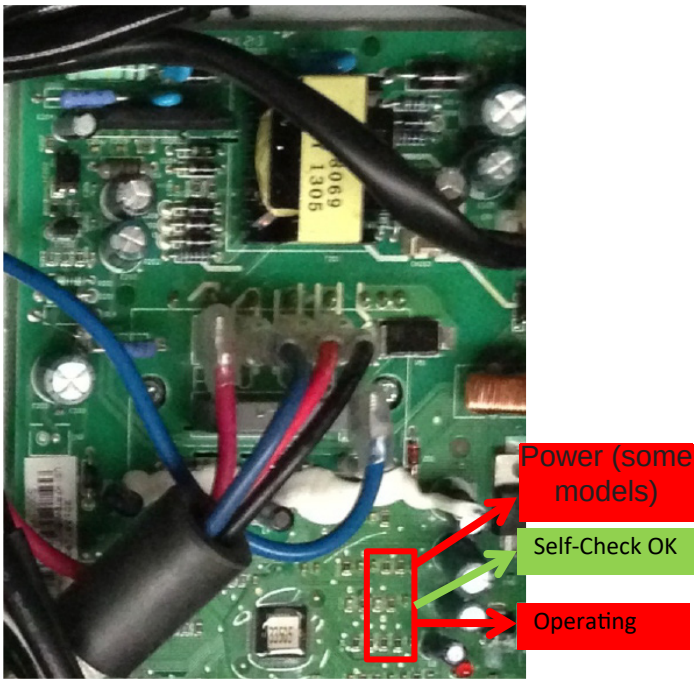
Description:	Communication malfunction between outdoor unit and all indoor units.
General Note:	Indoor unit is not receiving communication from outdoor unit for 120 seconds, or outdoor unit has not receive communication from any indoor units for 180 seconds.



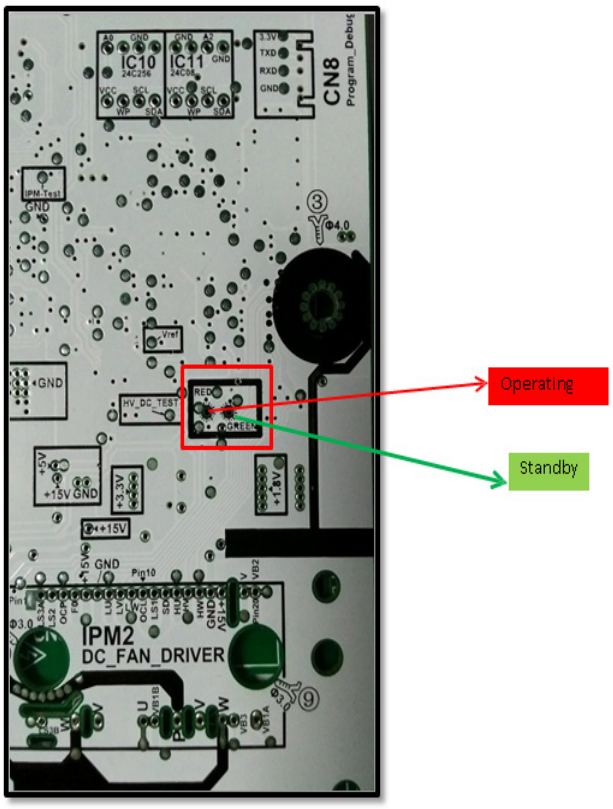
Error Code: E2 (continued)



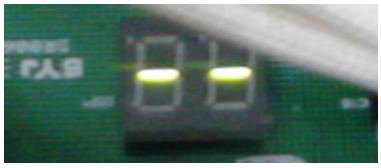
- Use a multimeter to test the DC voltage between L2 and L3 ports of the outdoor unit. The red pin of multimeter connects to the L2 port while the black pin connects to the L3 port.
- If the unit is running normally, the voltage will move alternately between positive and negative values.
- If the voltage is positive then check the outdoor unit main control.
- If the voltage is negative then check indoor unit main control.



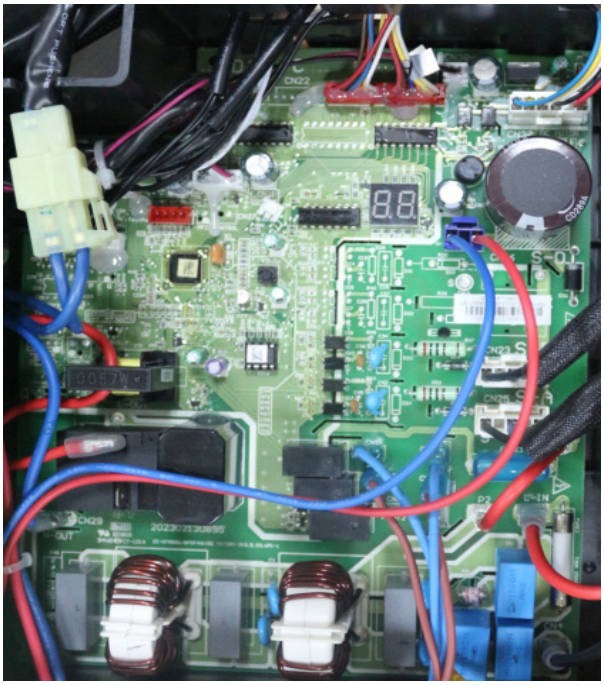
Error Code: E2 (continued)



Integrated Power Module (IPM) for 2- and 3-zones units.



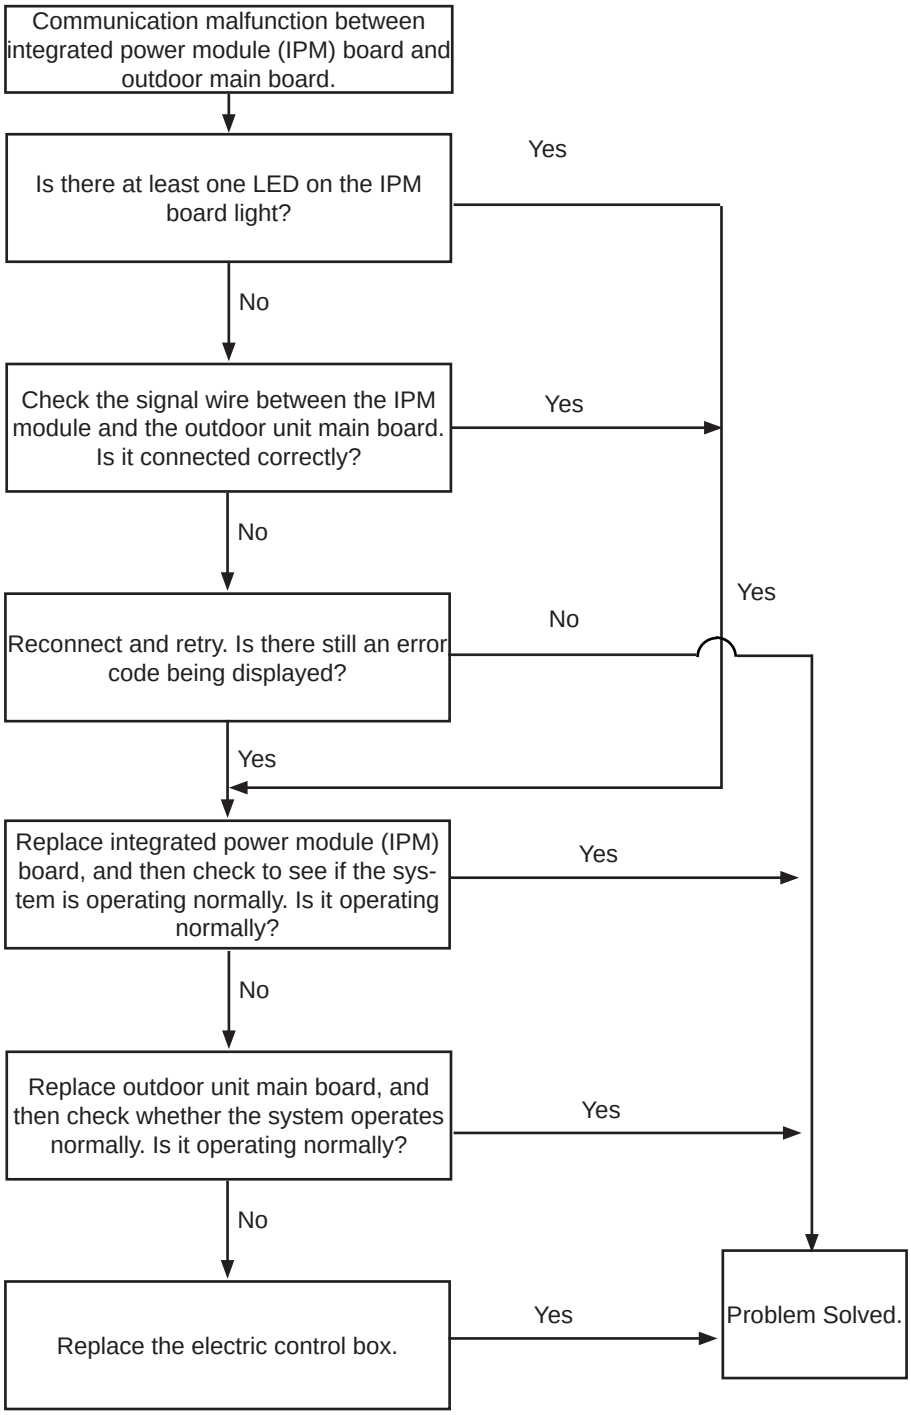
Main board LED when power is on and unit in standby mode with no error codes.



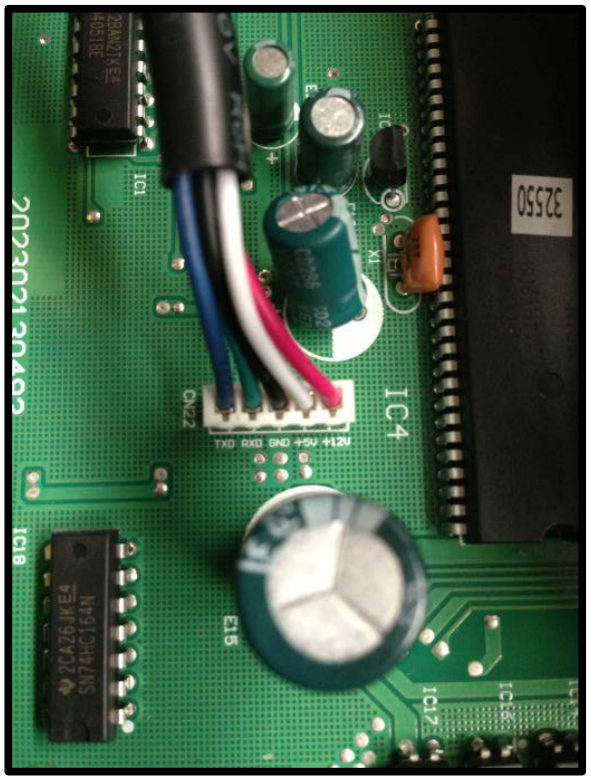
Check point button, press once to verify the number of indoor units are connected.

4.3. Error Code: E3

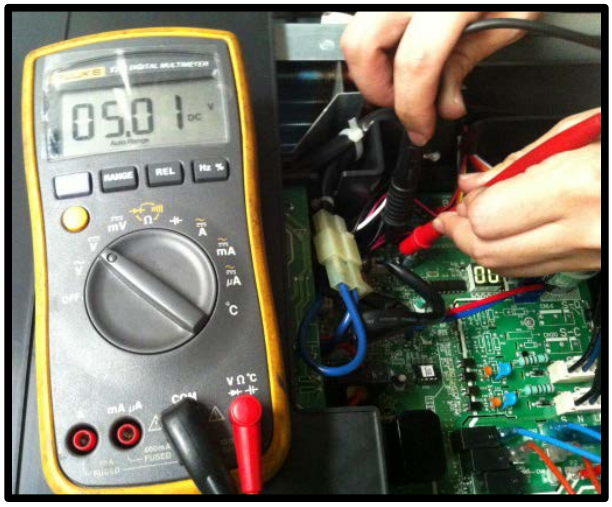
Description:	Communication error between outdoor unit main control and integrated power module (IPM).
General Note:	The main outdoor control board chip is not receiving feedback from integrated power module for a duration of 60 seconds.

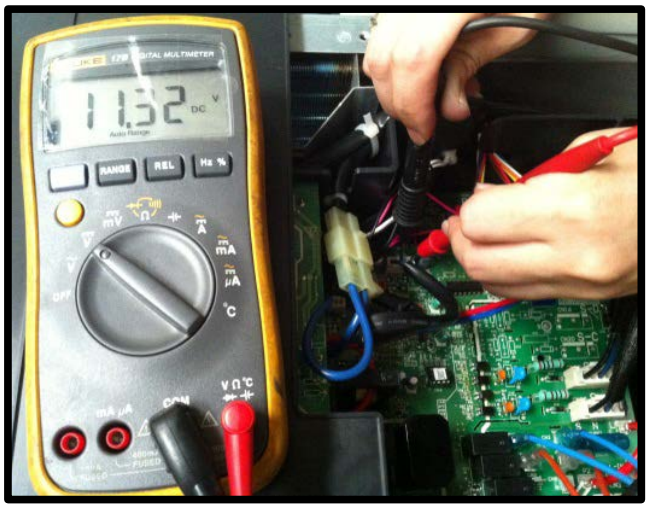


Error Code:	E3 (continued)



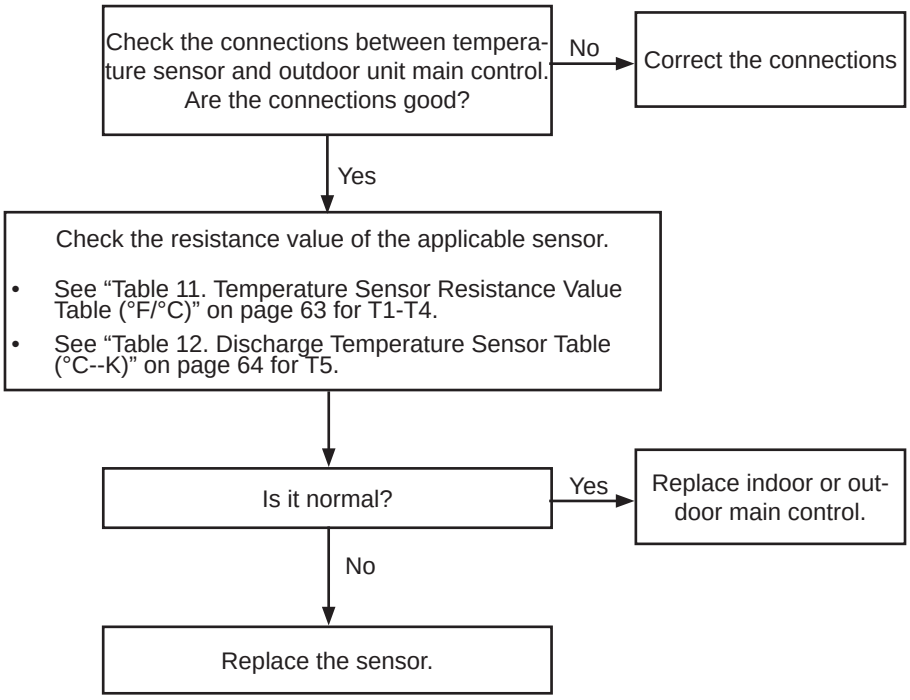
NOTE - Use a multimeter to test the DC voltage between black pin and white pin of signal wire The normal value should be around 5V.
Use a multimeter to test the DC voltage between black pin and red pin of signal wire. The normal value should be around 12V.

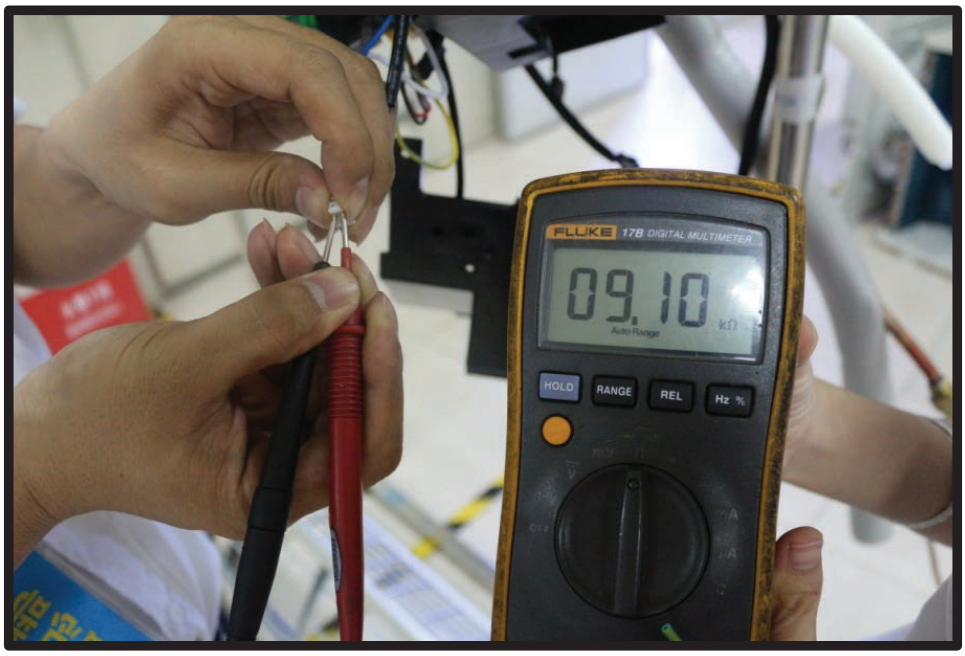




4.4. Error Codes: E4, F1, F2 and F3

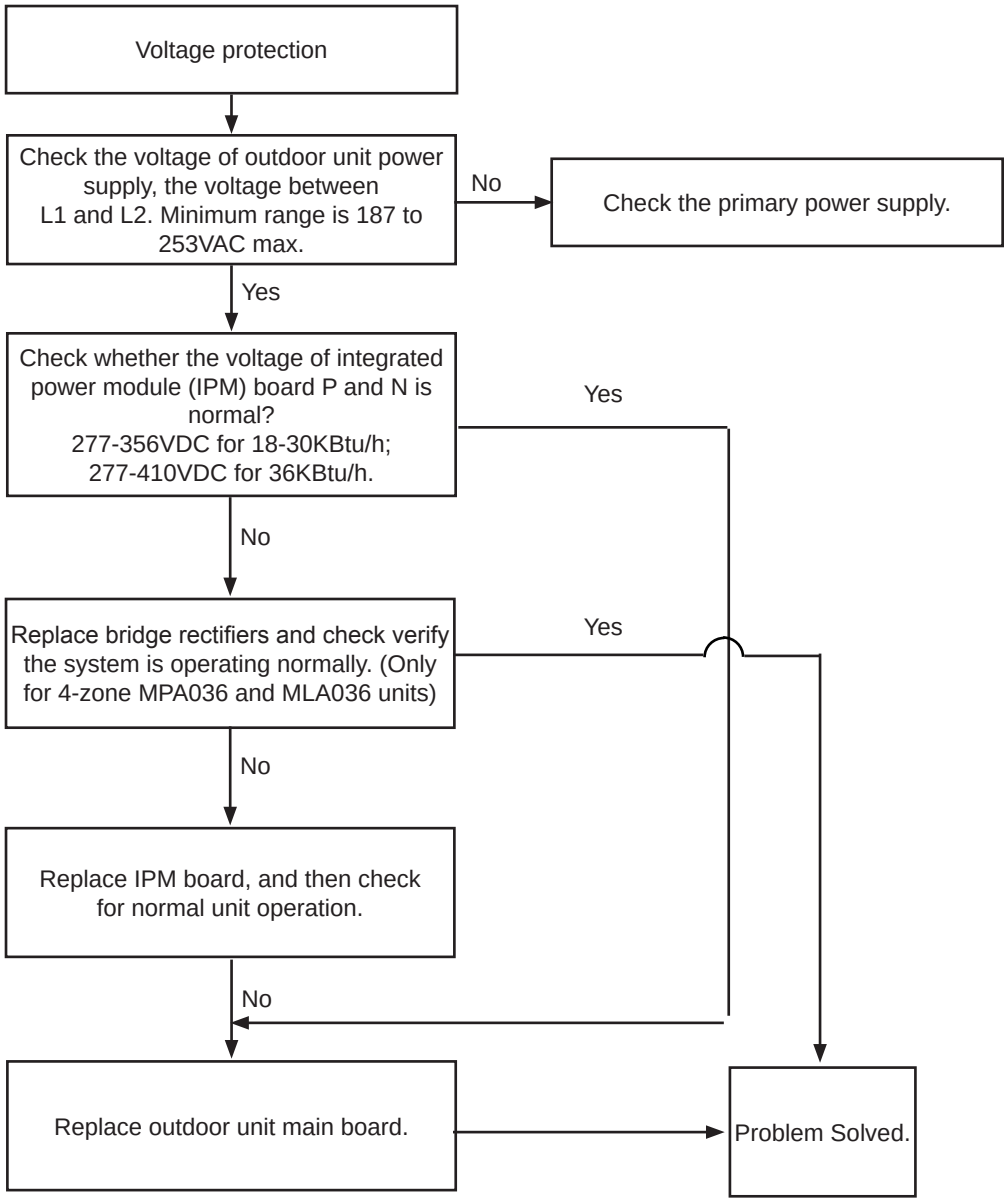
Description:	Temperature sensor error: T2 indoor unit coil outlet temperature sensor T3 outdoor coil sensor T4 outdoor ambient sensor T5 compressor discharge sensor
General Note:	Error displays if voltage is lower than 0.06V or higher than 4.94V.



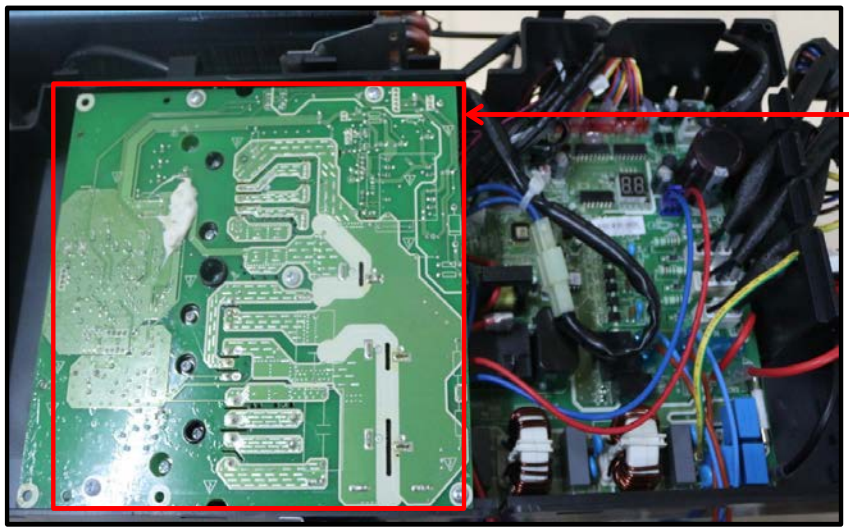


4.5. Error Code: E5

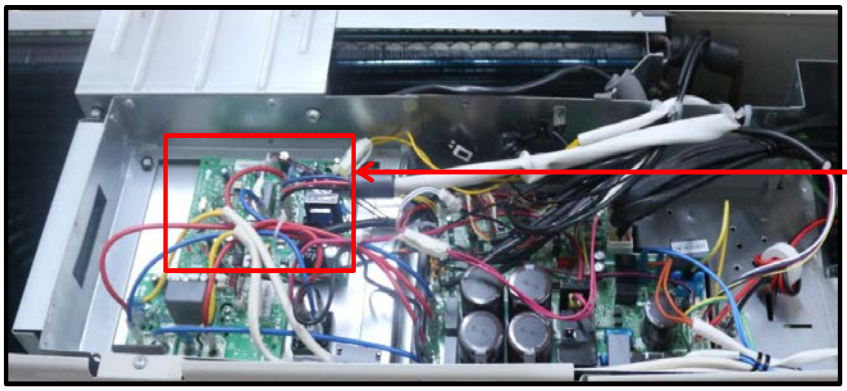
Description:	High or low voltage protection active.
General Note:	Either an abnormal voltage rise or drop is detected. Check the specified voltage detection circuit.



Error Code:	E5 (continued)



IPM (for 2-zone and 3-zone)



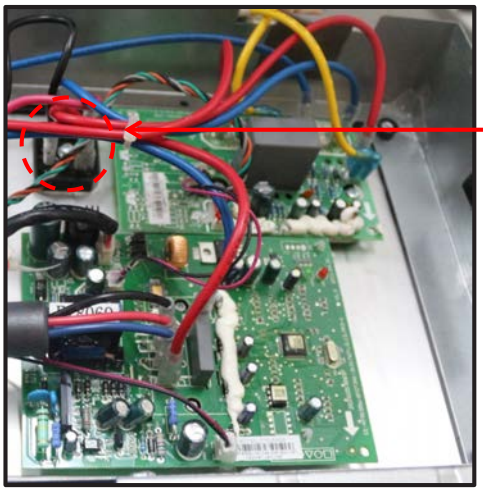
IPM (for 4-zone)

P-N (for 2-zone and 3-zone)

Error Code:	E5 (continued)

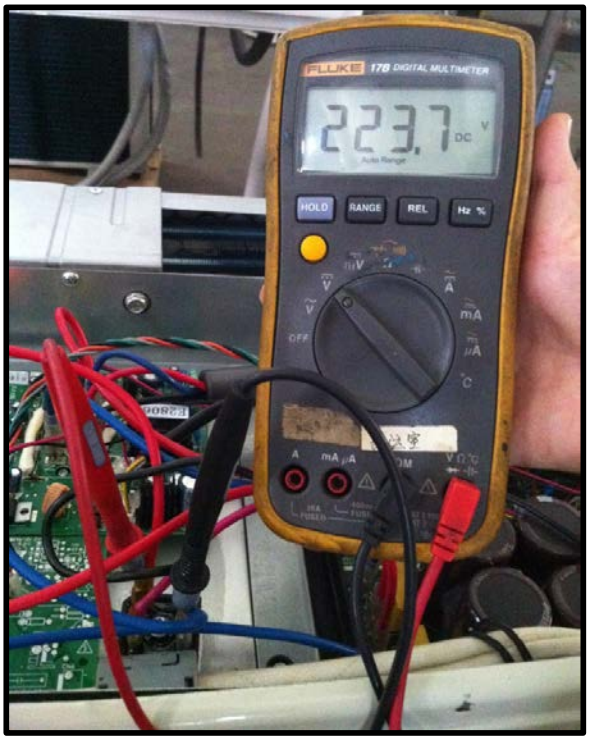
P-N (for 4-zone)

Bridge rectifier for 2-zone and 3-zone



Bridge rectifier for 4-zone

Error Code:	E5 (continued)



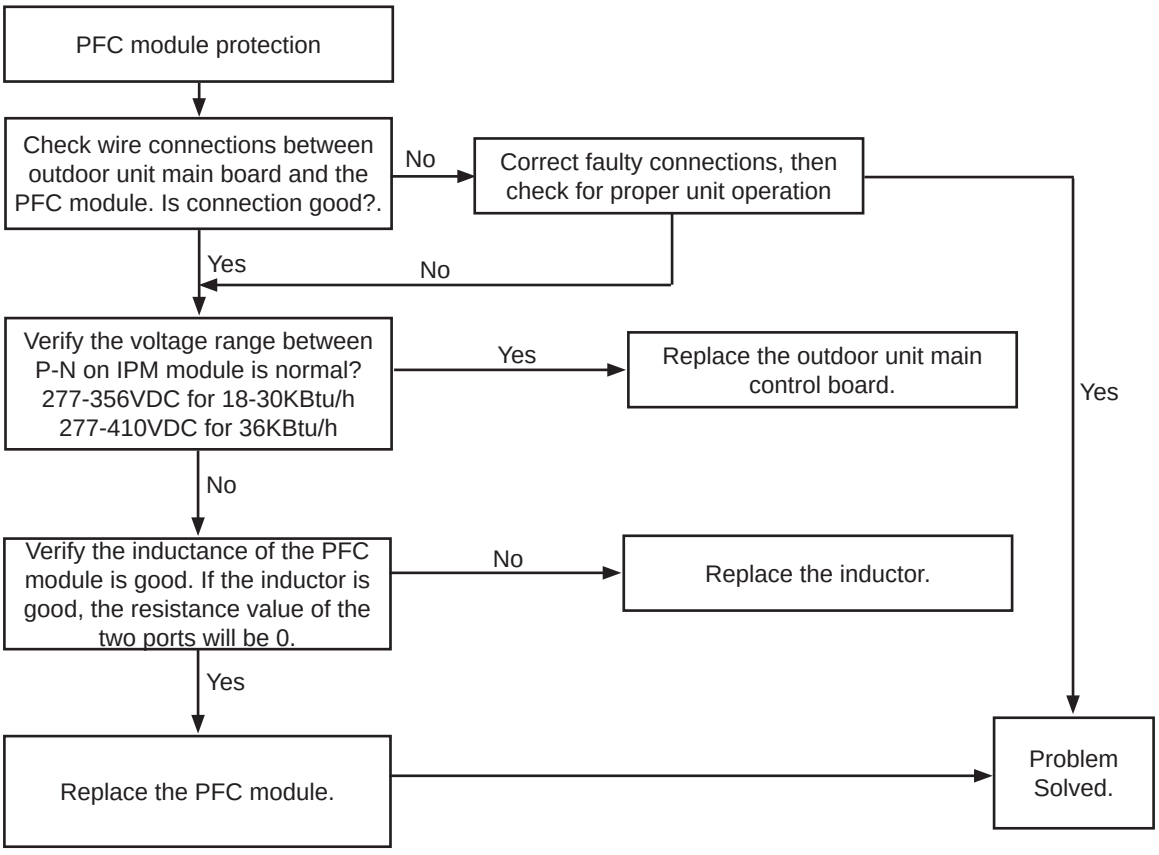
Remark:

Measure the DC voltage between + and - port on the bridge rectifier.

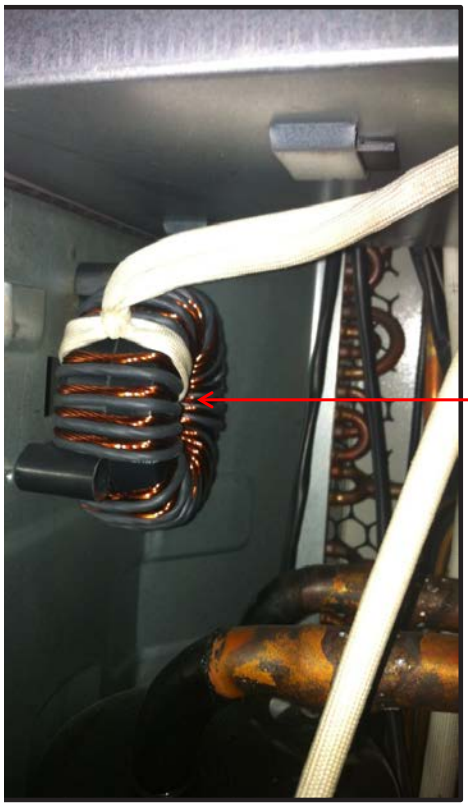
The normal value should be 190V~250V.

4.6. Error Code: E6

Description:	Power Factor Correction (PFC) module protection (MPA036S4M-1P and MPA048S4M-1P only)
General Note:	When the voltage signal sent by the PFC to the main outdoor unit control board is abnormal, the display LED will show “E6” and unit will turn off.

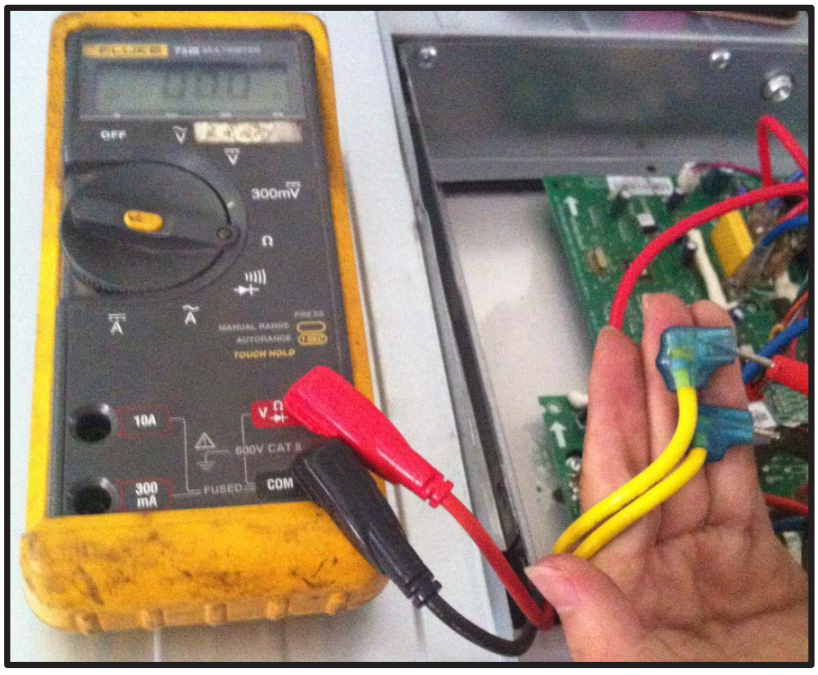


Error Code:	E6 (continued)



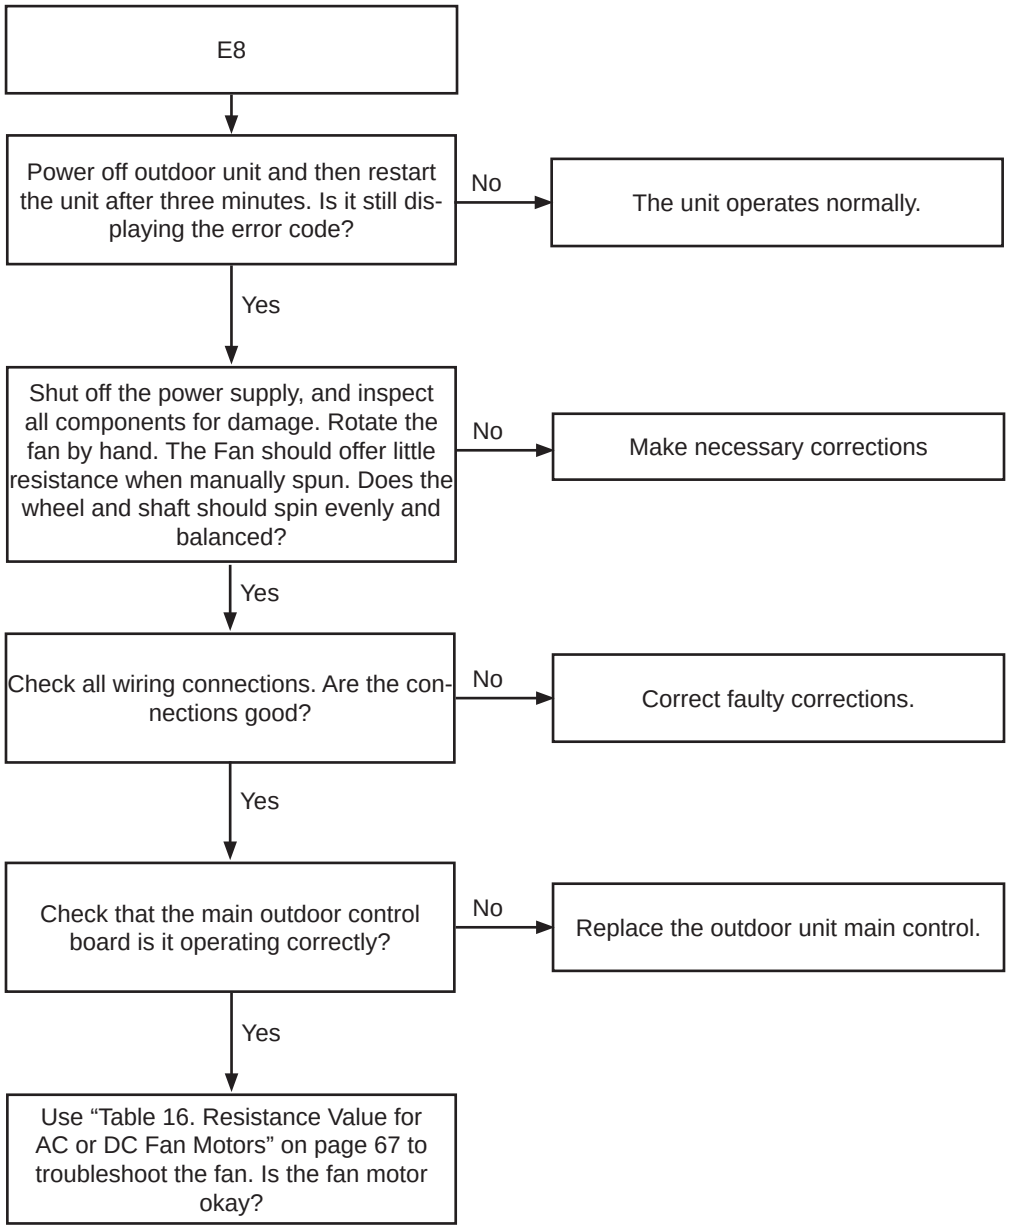
Inductor

Two terminals of the inductor



4.7. Error Code: E8

Description:	Outdoor DC fan motor speed error.
General Note:	When outdoor fan speed is too low (300 RPM) or too high (2400 RPM) for a specific time duration, the unit will stop and the LED will display the failure.



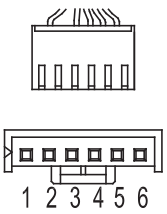
Error Code:	E8 (continued)

NOTE: *DC fan motor(control chip is inside fan motor)*

Power on and while the unit is in standby, measure the voltage between pins 1 and 3. Also measure the voltage between pin 3 and 4 at fan motor connector.

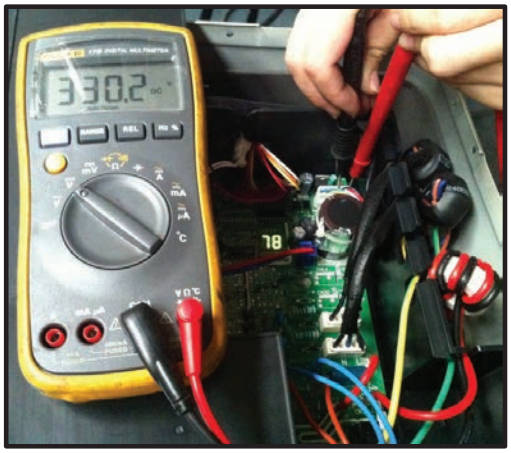
If the value of the voltage is not in the range as shown in the below table, the outdoor unit main control board is faulty and should be replaced.

Table 10. DC Motor Voltage Input and Output

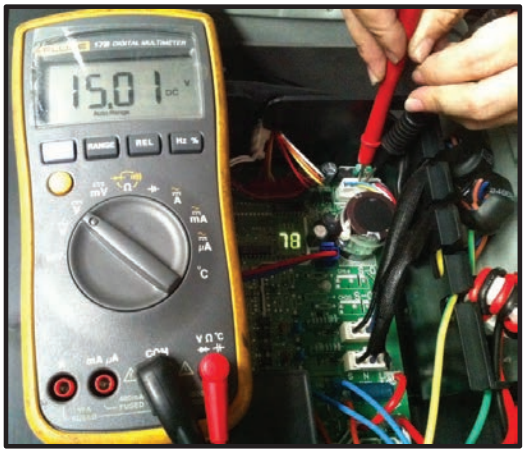


No.	Color	Signal	Voltage
1	Red	Vs/Vm	200~380V
2	---	---	---
3	Black	GND	0V
4	White	Vcc	13.5~16.5V
5	Yellow	Vsp	0~6.5V
6	Blue	FG	13.5~16.5V

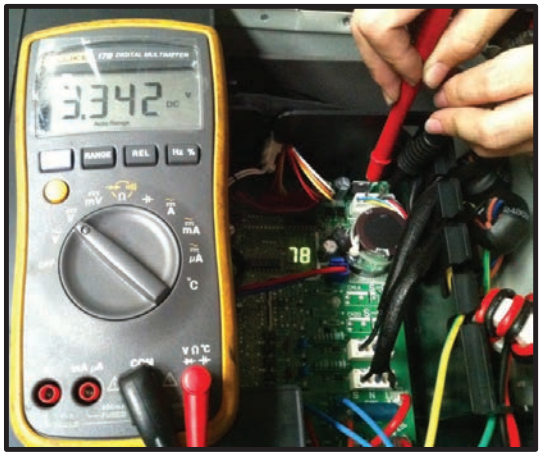
Vs



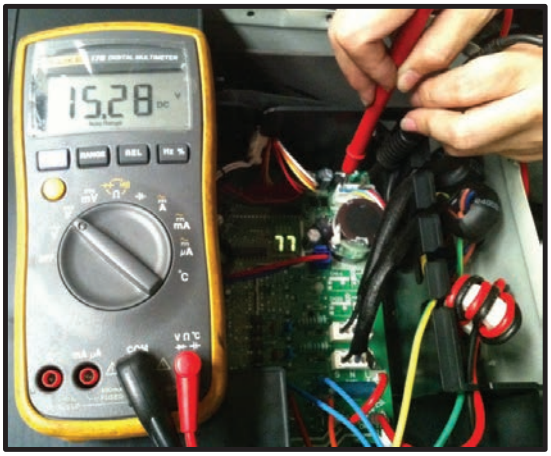
Vcc



Vsp

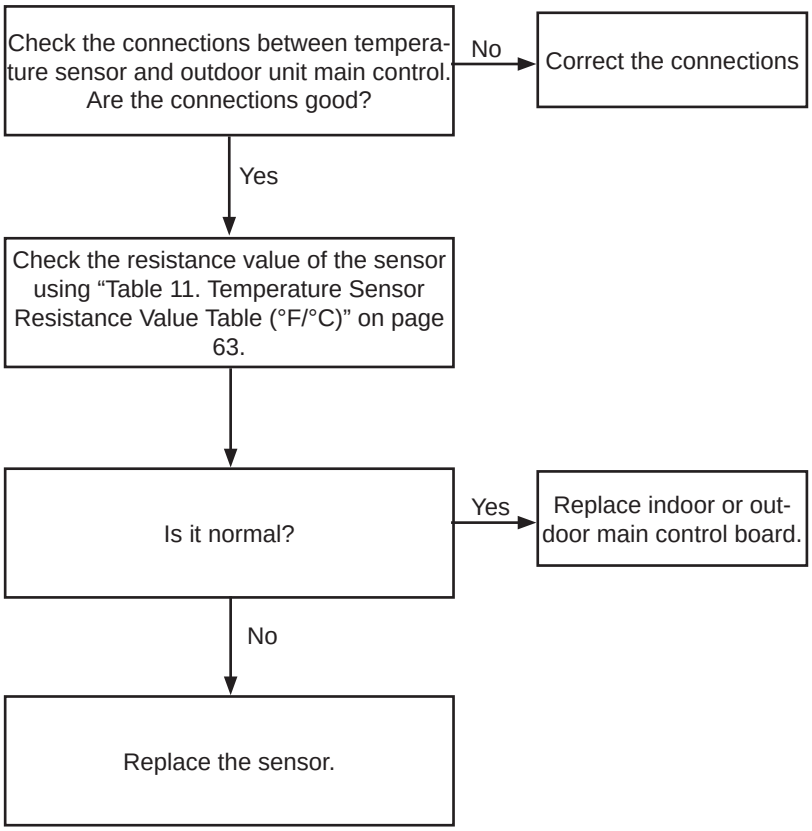


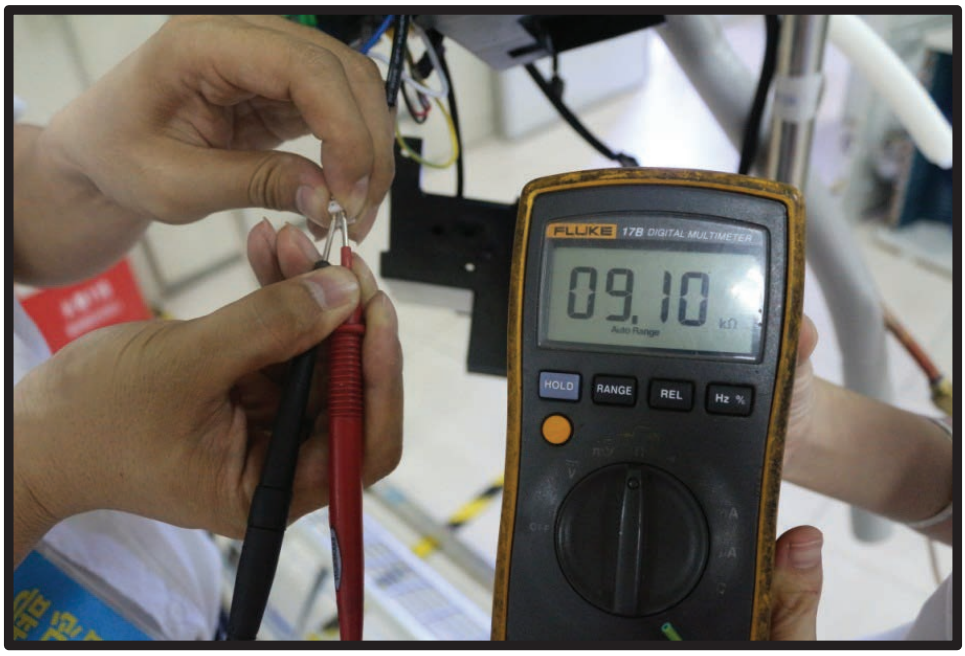
FG



4.8. Error Codes: F1, F2, F3, F4 , F5 and F6

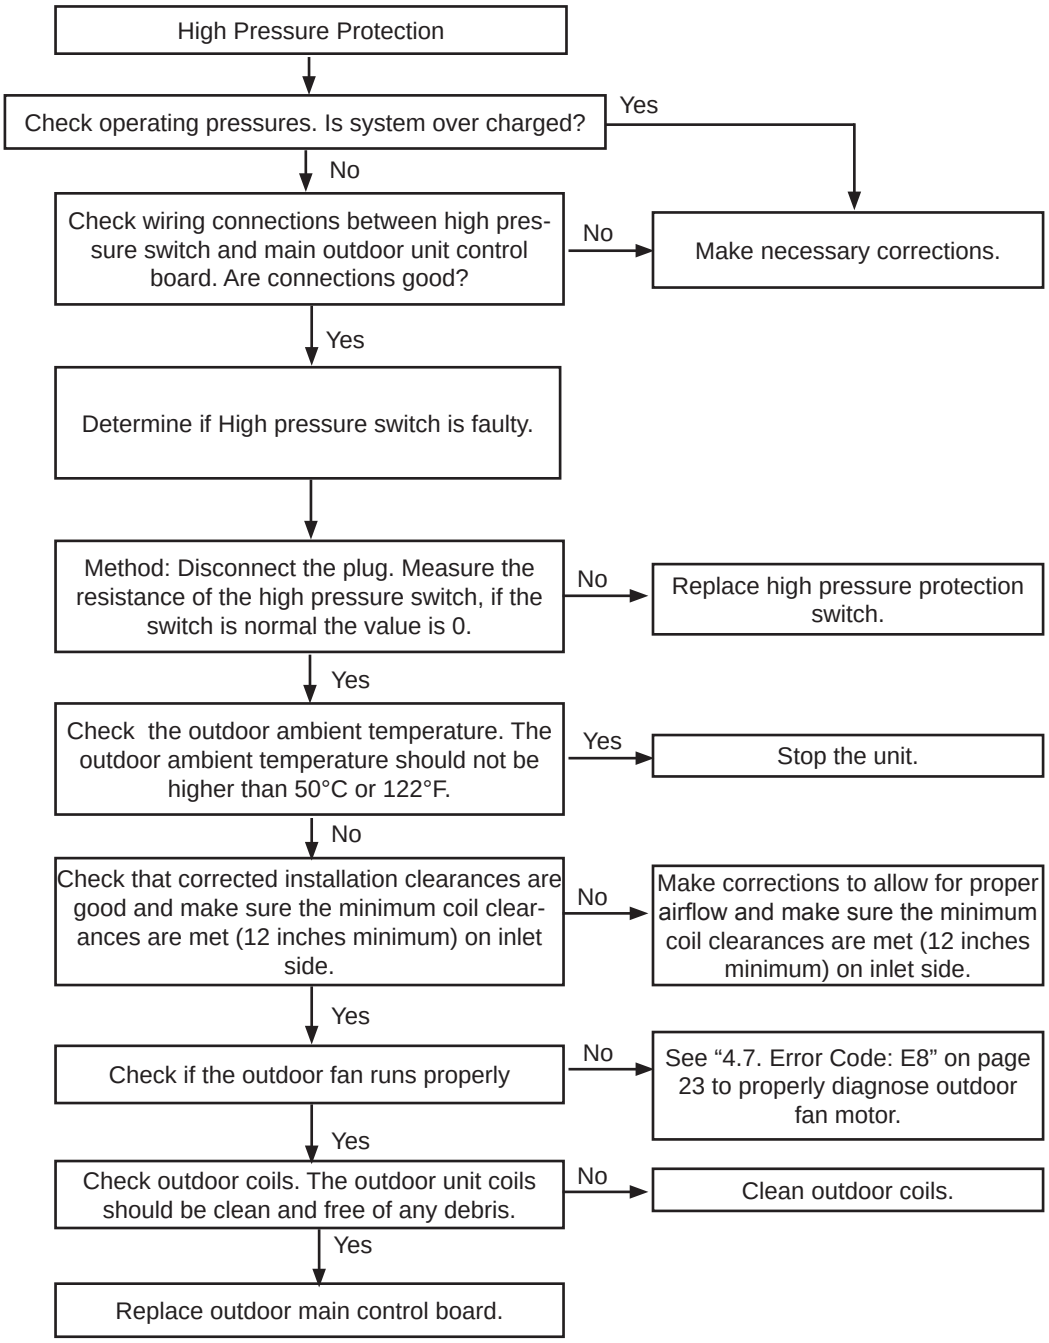
Description:	Indoor unit #1, #2, #3, #4 and #5 coil outlet temperature (T2) sensor error.
General Note:	If the sampling voltage is not 5V, the LED will display this failure.



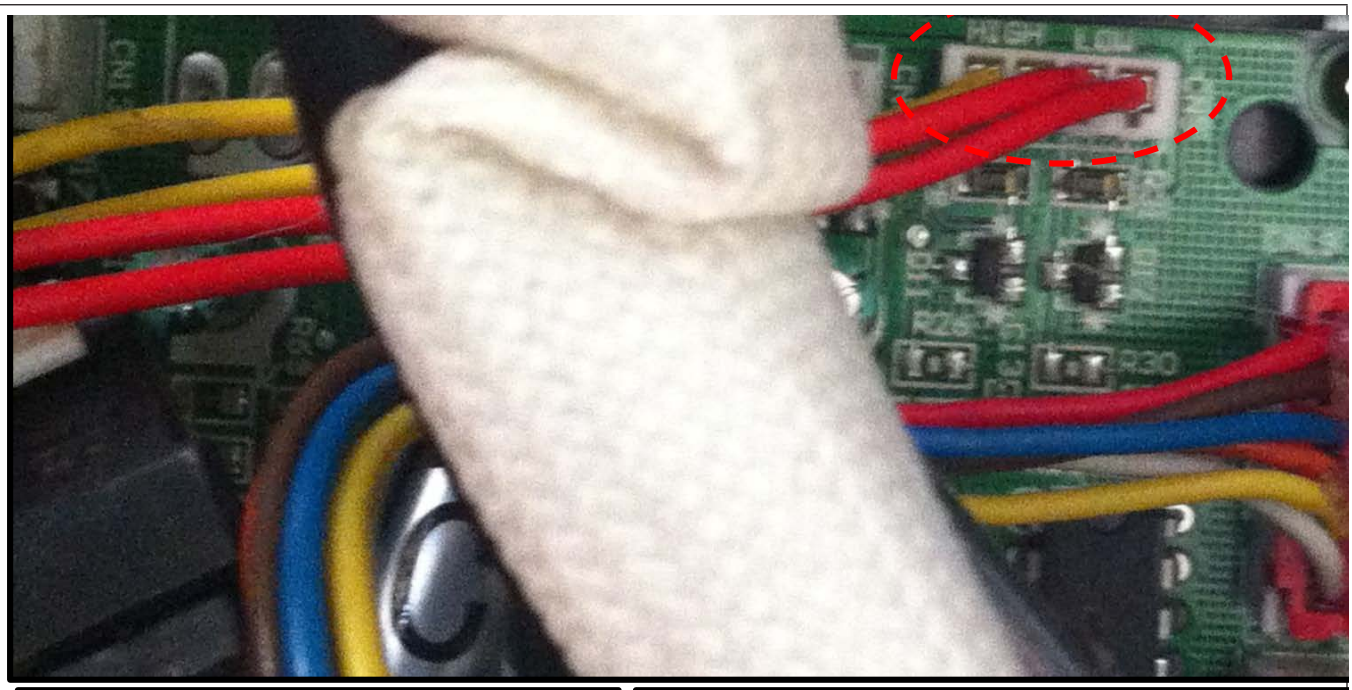


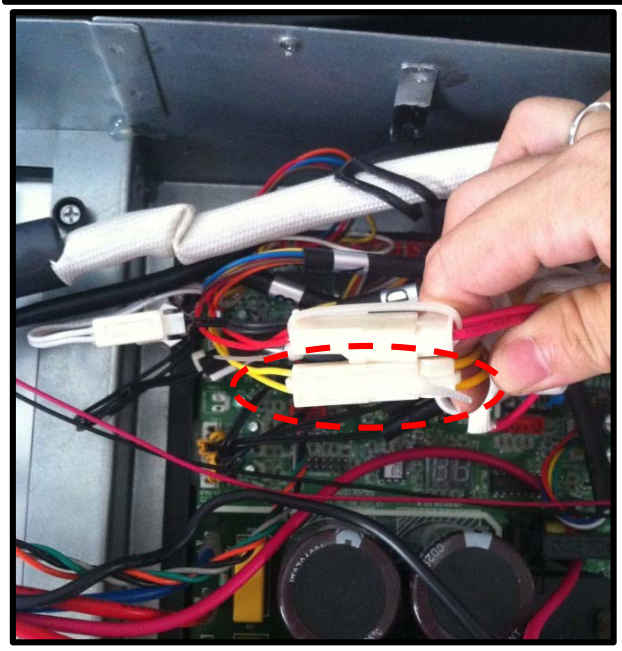
4.9. Error Code: P1

Description:	High pressure switch open. High pressure switch trips at 639 PSI and resets at 464 PSI.
General Note:	If the sampling voltage is not 5V, the LED will display this failure.



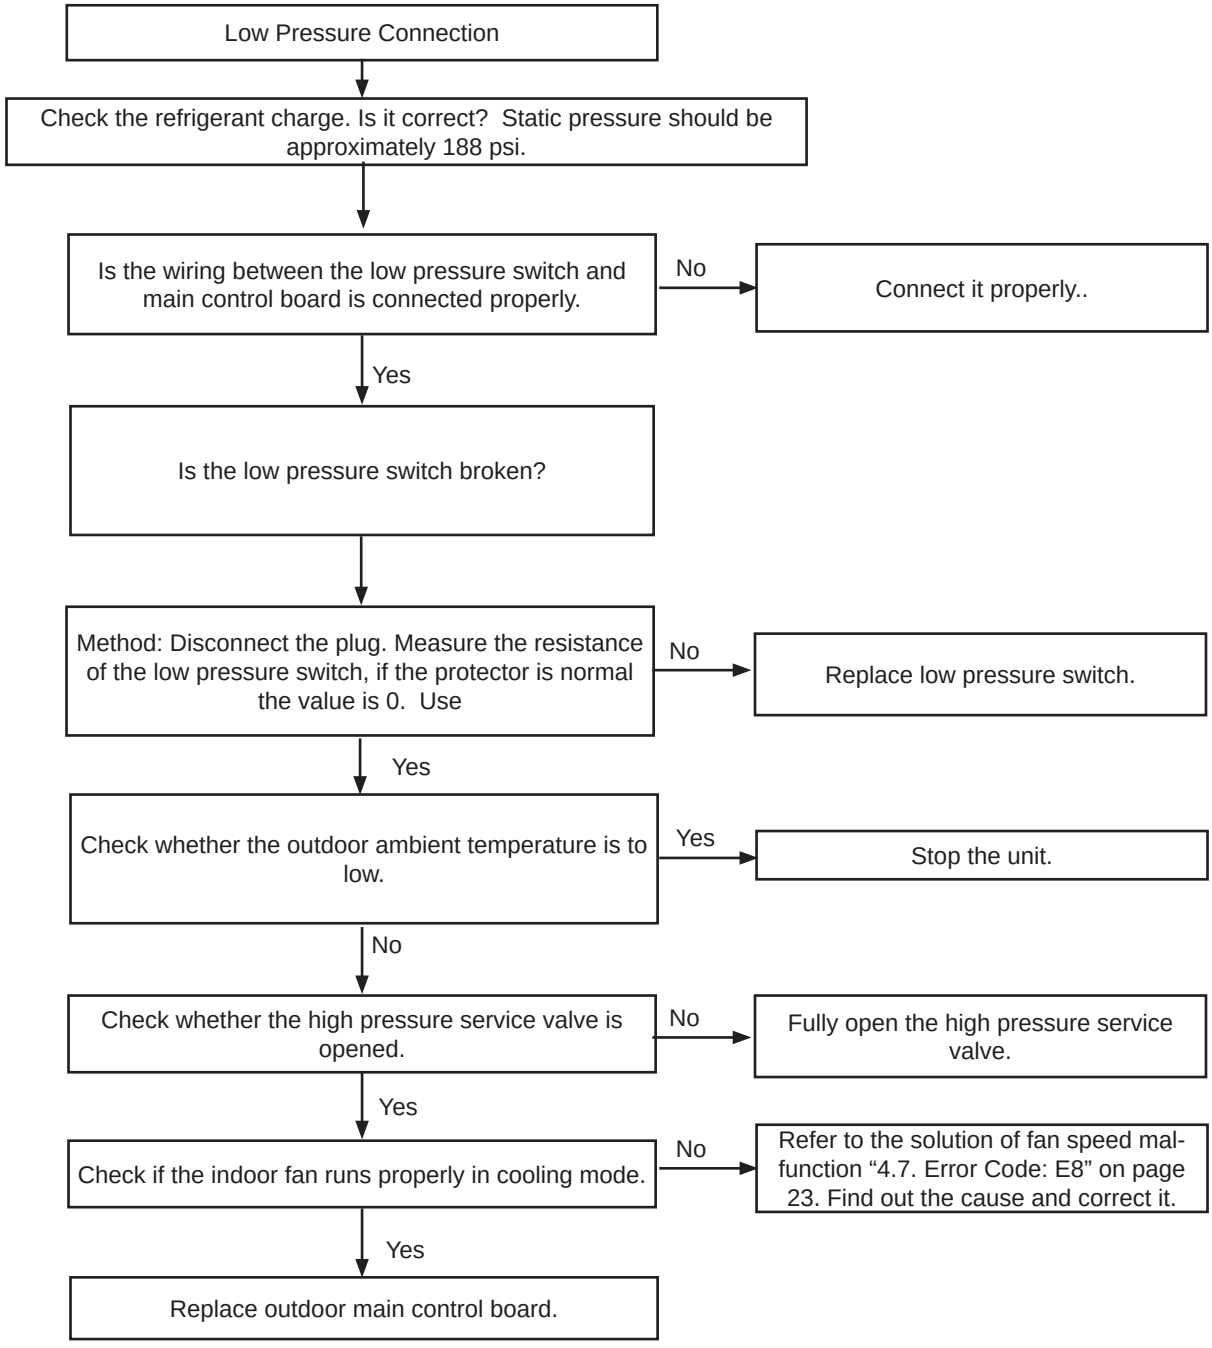
Error Code:	P1 (continued)



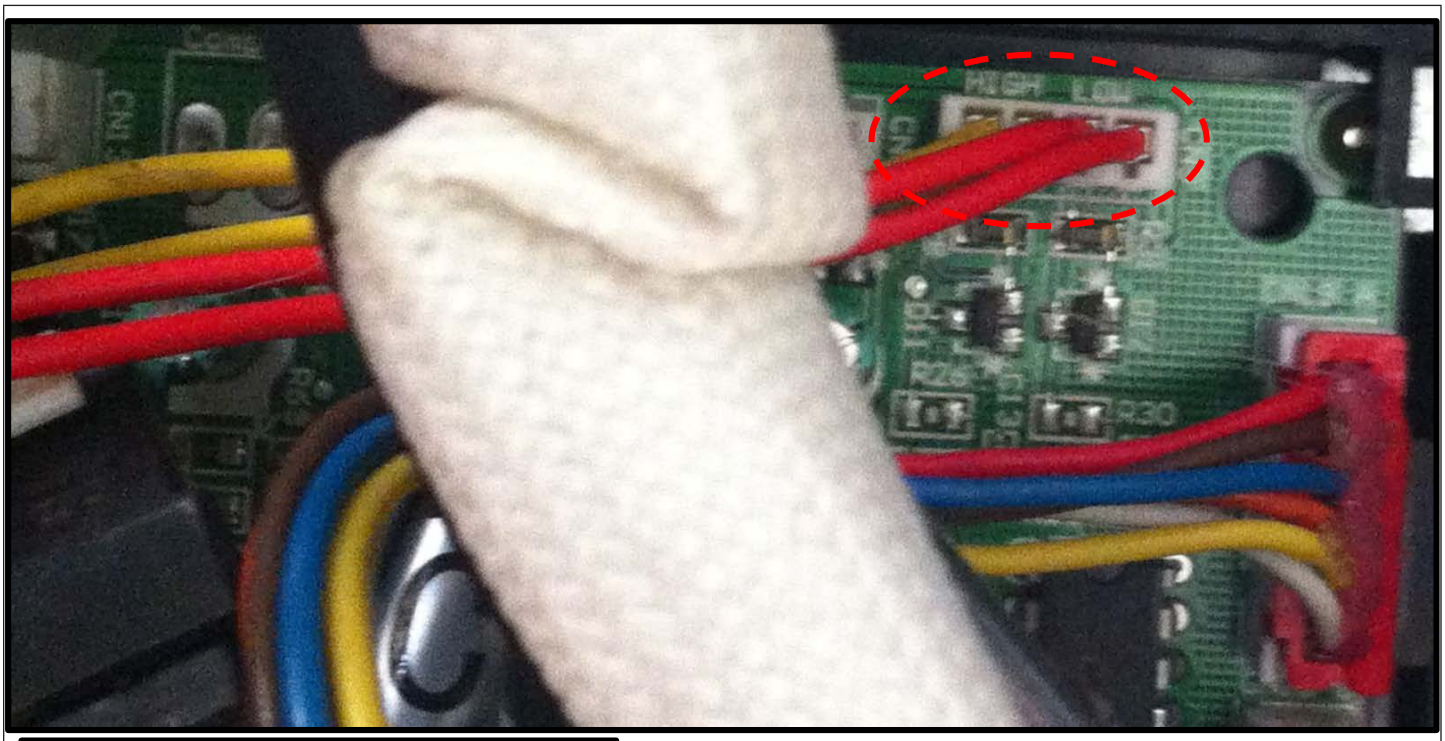


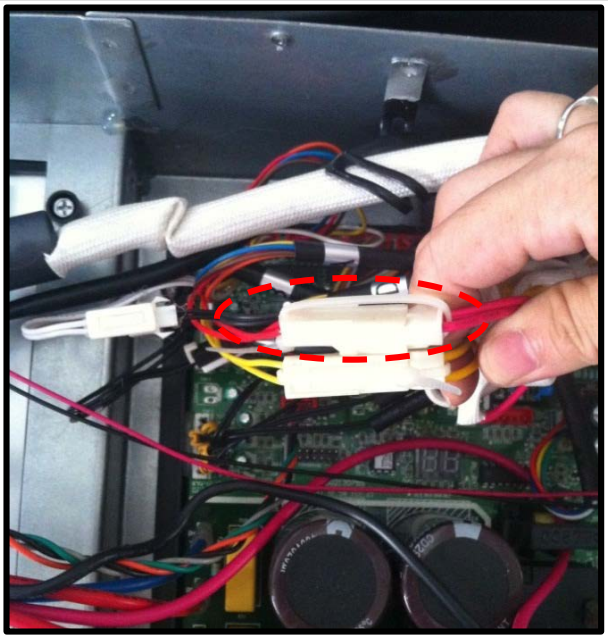
4.10. Error Code: P2

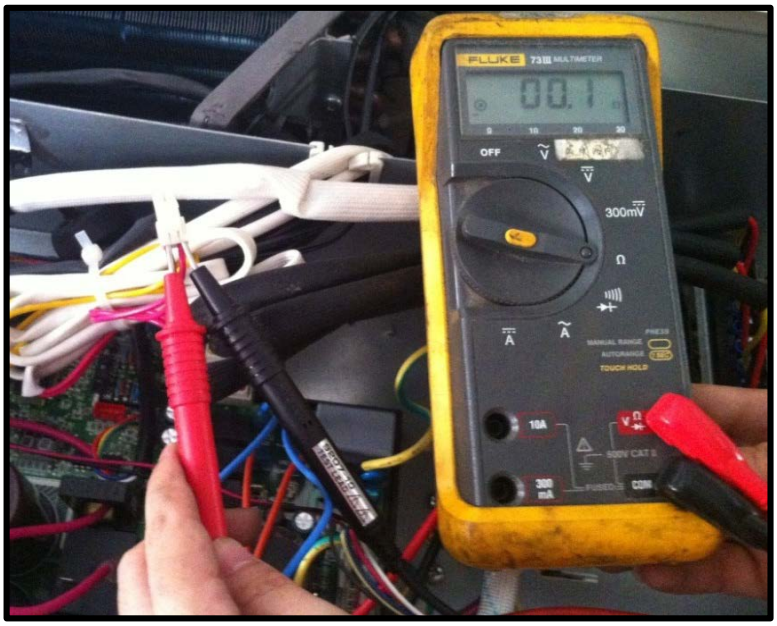
Description:	Low pressure switch open. P2 Low pressure switch trips at 20 psi and resets at 43 PSI.
General Note:	If the sampling voltage is not 5V, the LED will display this failure.



Error Code:	P2 (continued)

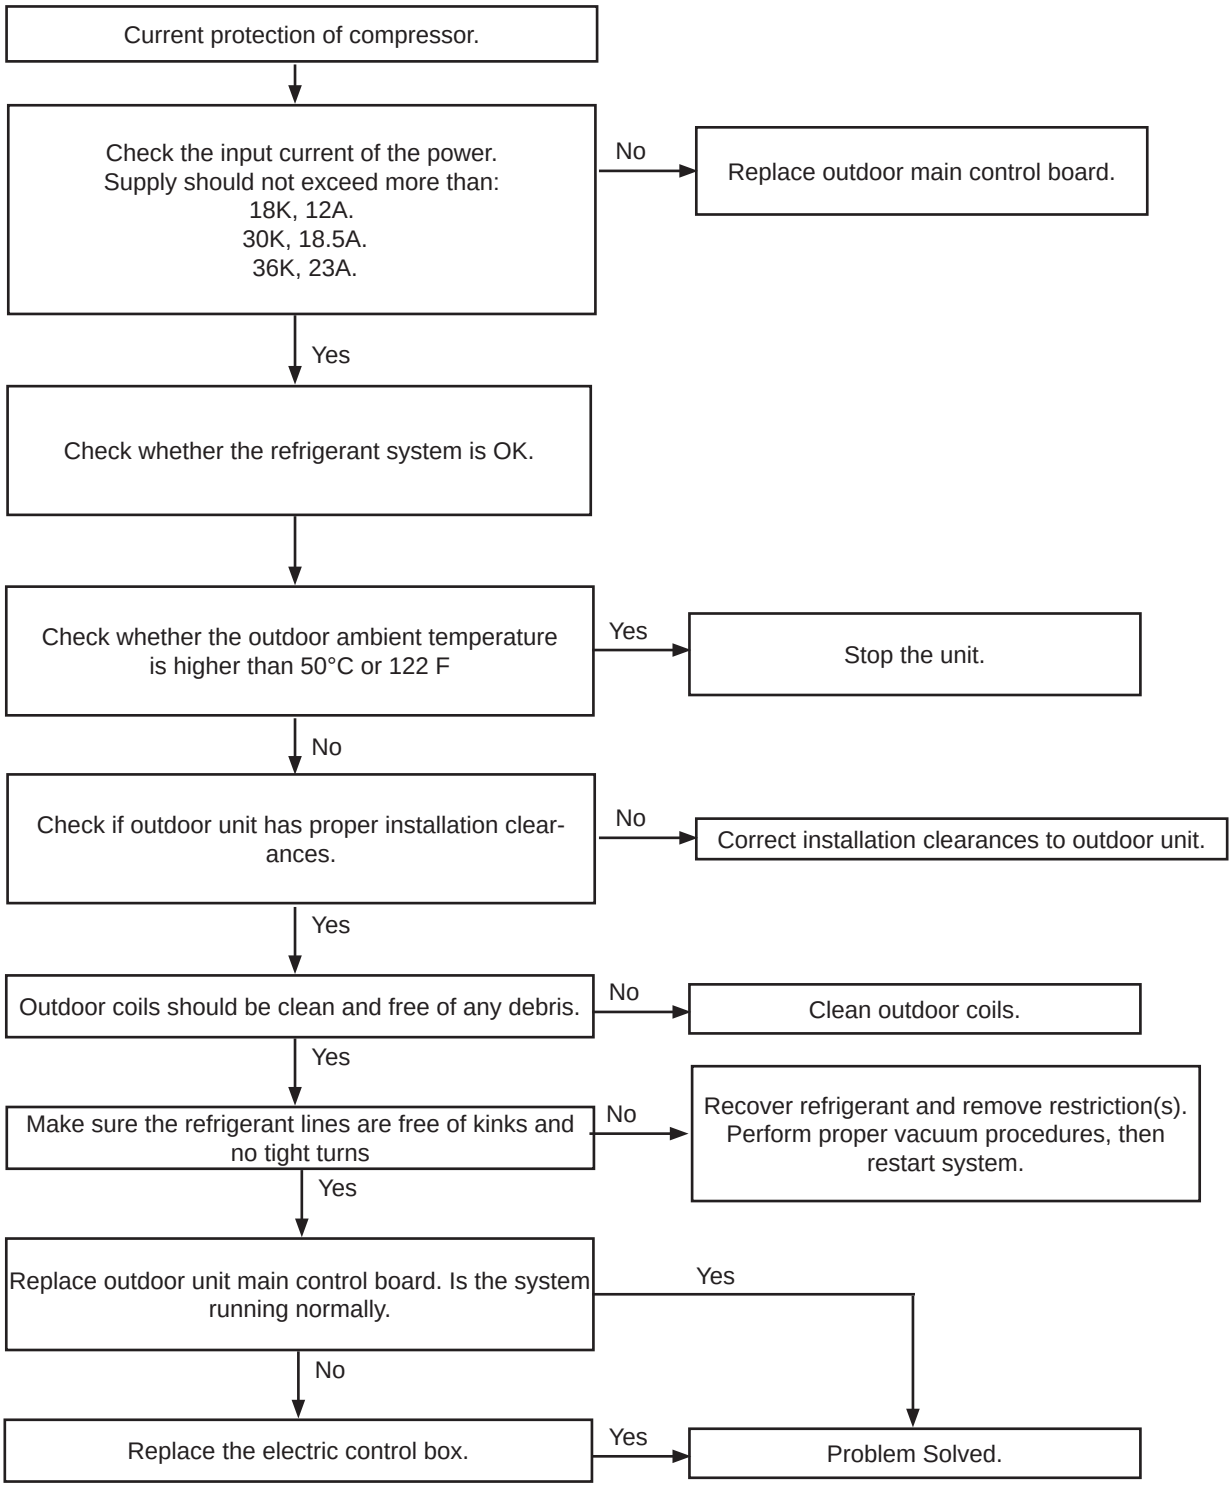






4.11. Error Code: P3

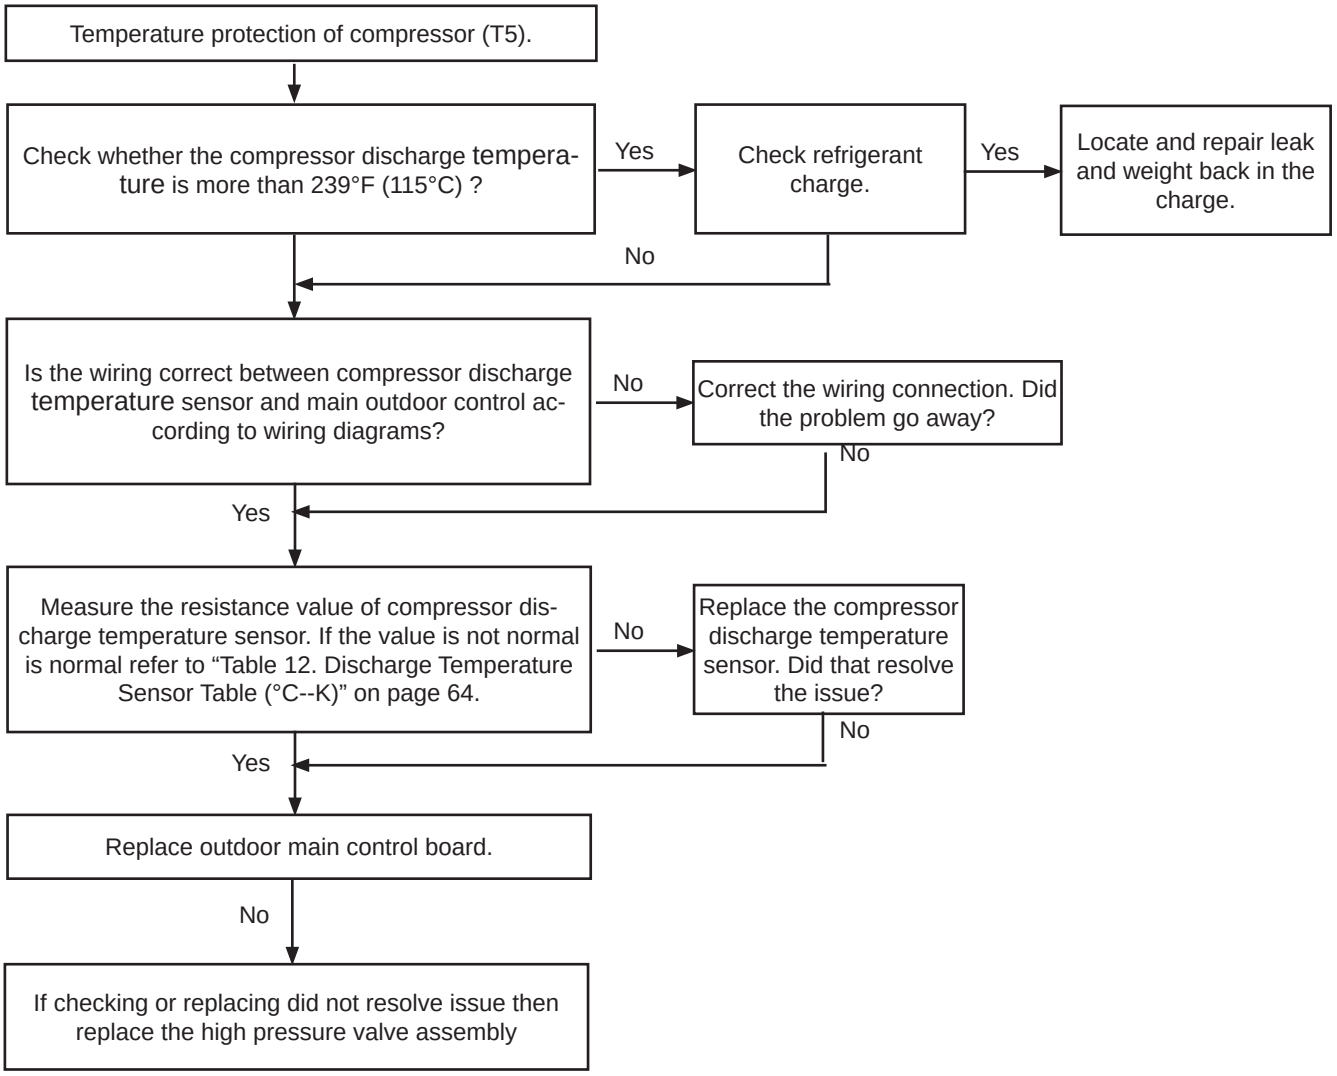
Description:	Outdoor compressor current overload sensed
General Note:	If the outdoor current exceeds the current limit value, the LED will display the failure.



Error Code:	P3 (continued)

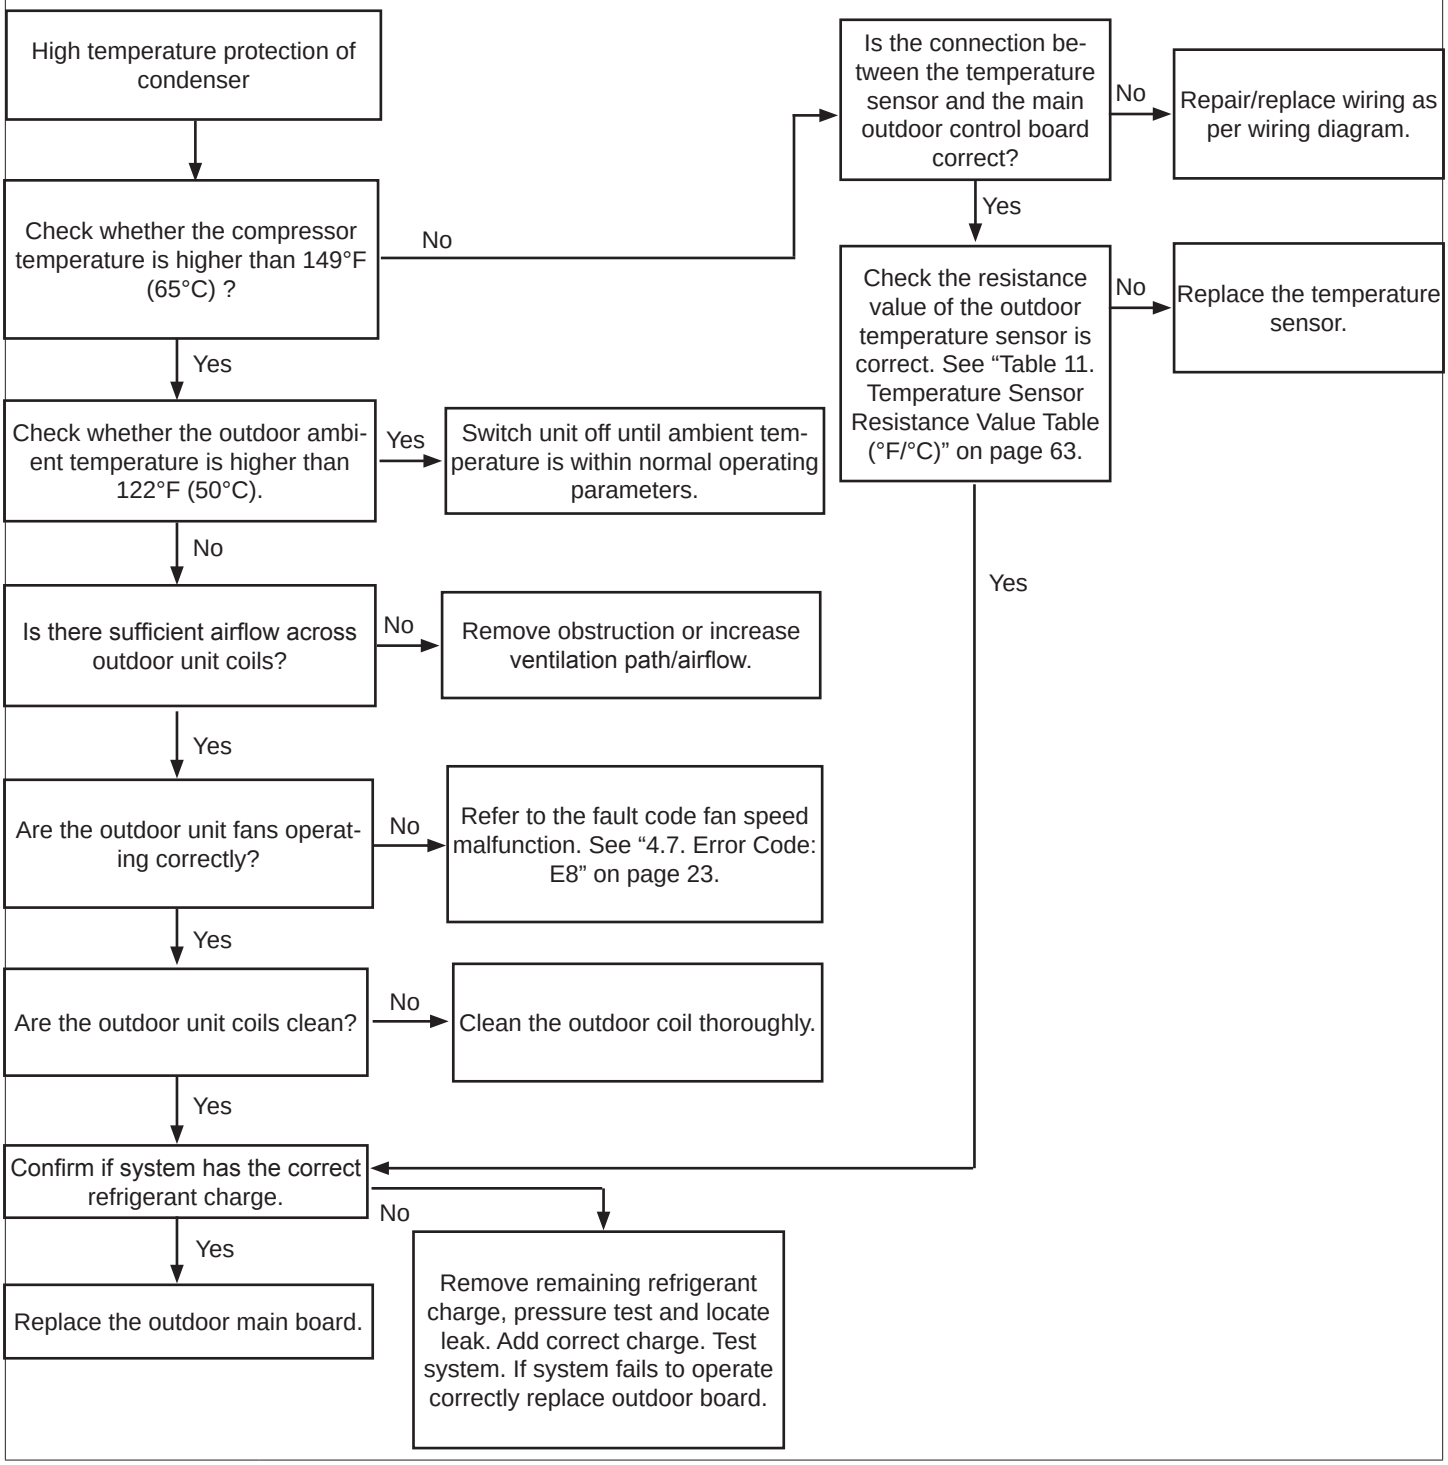
4.12. Error Code: P4

Description:	High temperature sensed at compressor discharge line.
General Note:	When the compressor discharge temperature (T5) is more than 239°F (115°C) for 10 seconds, the compressor will stop and restart until T5 is less than 194°F (90°C).



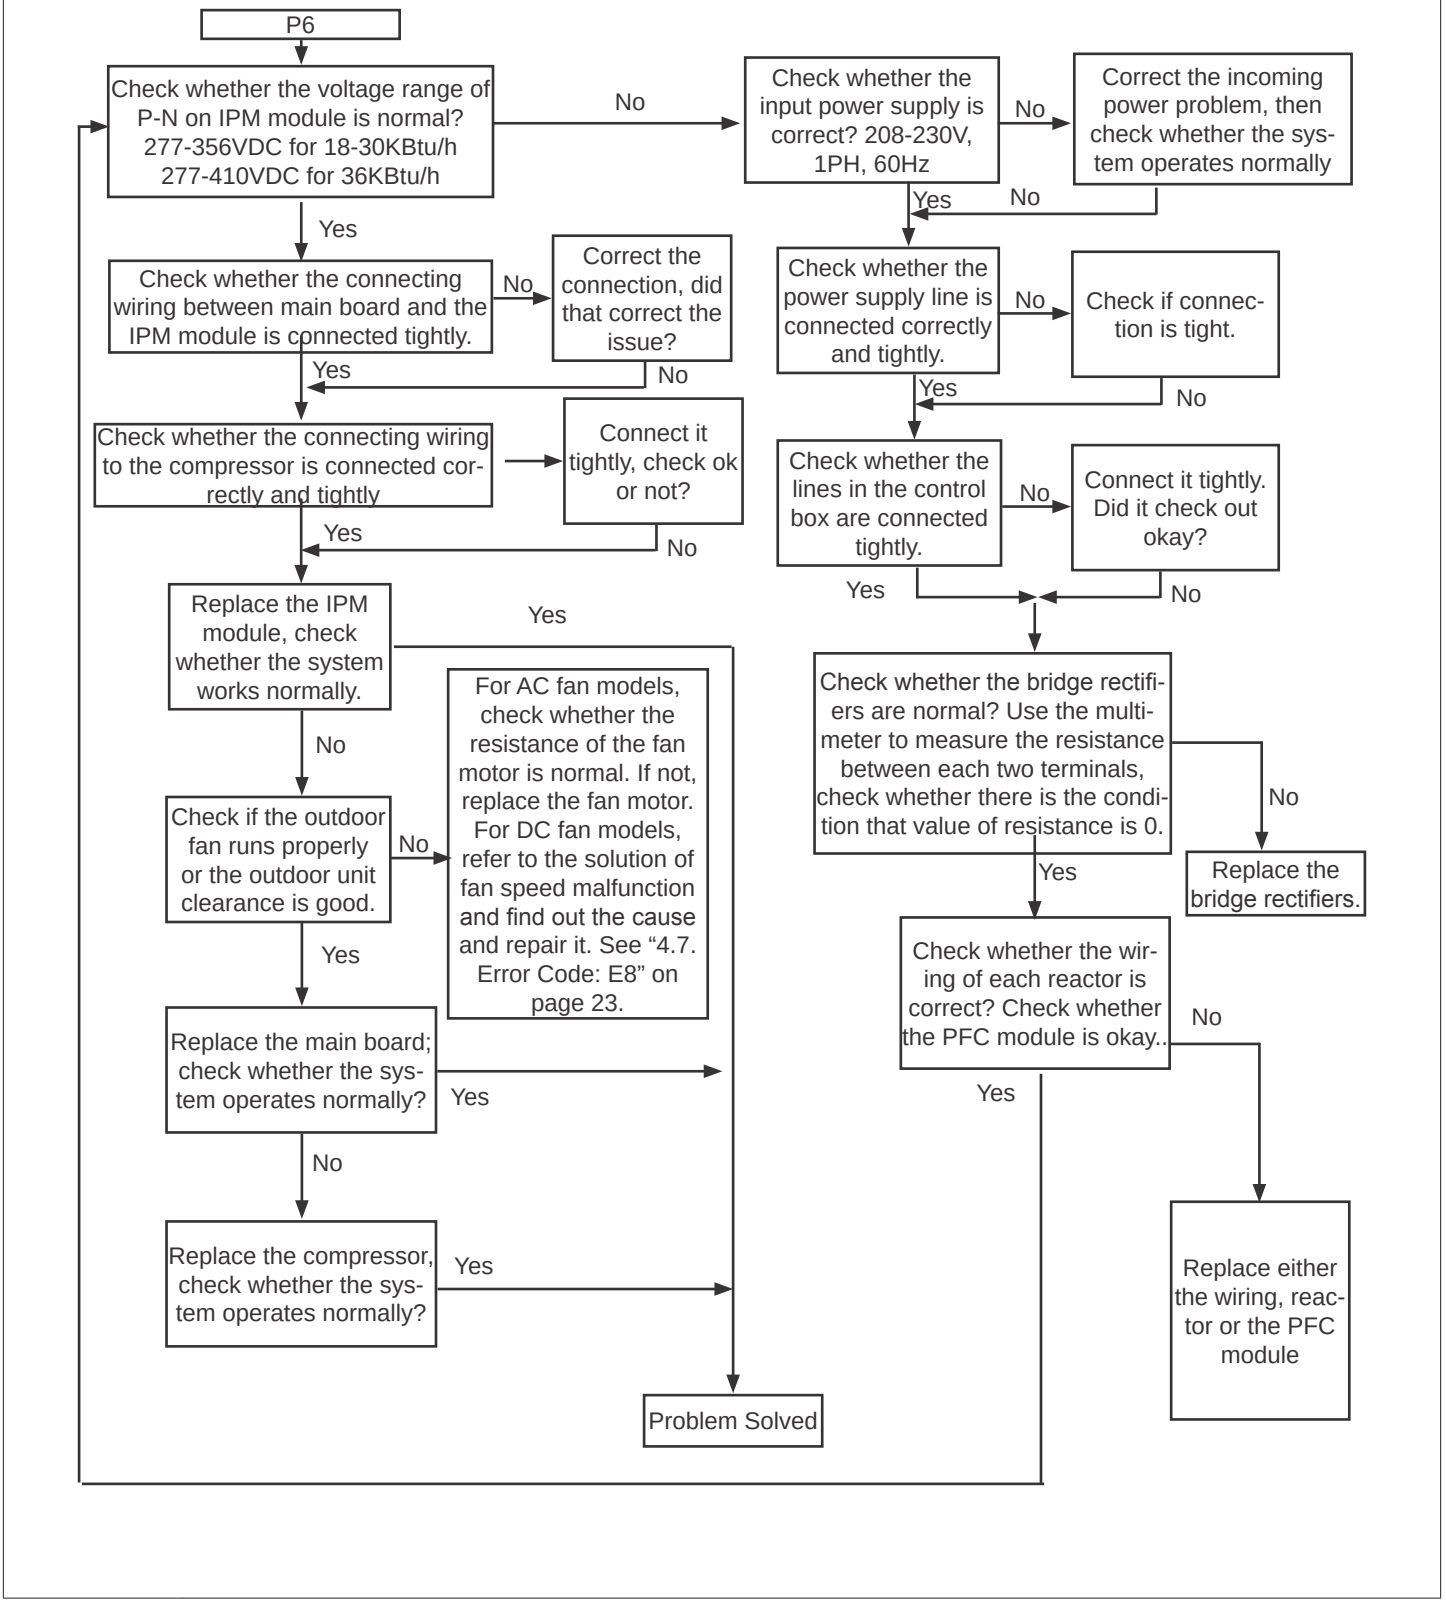
4.13. Error Code: P5

Description:	High temperature sensed at outdoor coil (T3).
General Note:	When outdoor pipe temperature is more than 149°F (65°C), the unit will stop, and unit runs again when outdoor pipe temperature is less than 125.6°F (52°C).



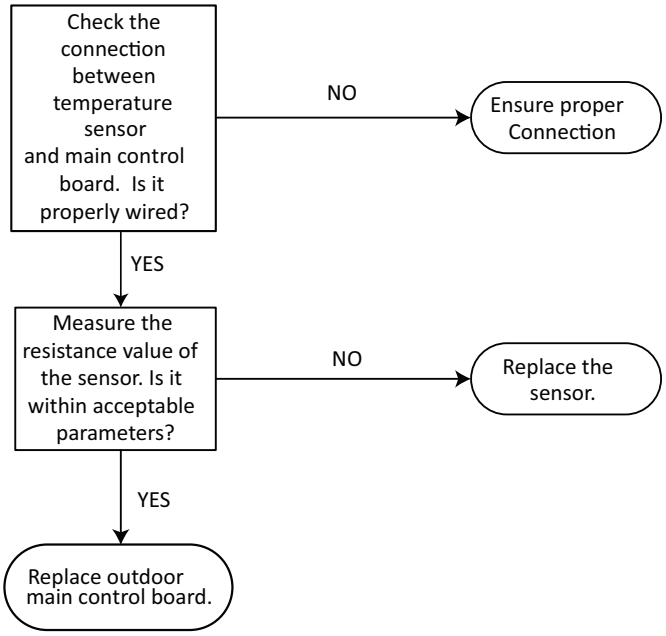
4.14. Error Code: P6

Description:	Integrated power module (IPM) error.
General Note:	When the voltage signal that IPM sends to the compressor drive chip is abnormal, the display LED will show “P6” and unit will turn Off.



4.15. Error Code: P7

Description:	Outdoor Integrated Power Module (IPM) Module Temperature Sensor Malfunction Diagnosis and Solution
General Note:	If the sampling voltage is lower than 0.06V or higher than 4.94V, the LED displays a failure.

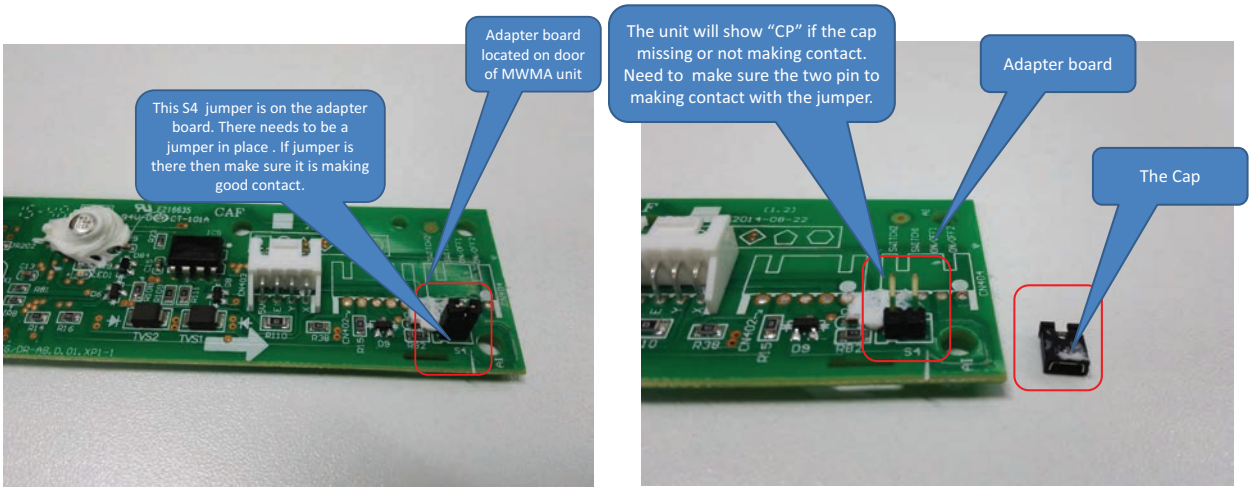


5. Extended Reference Guide - Indoor Unit Error Codes

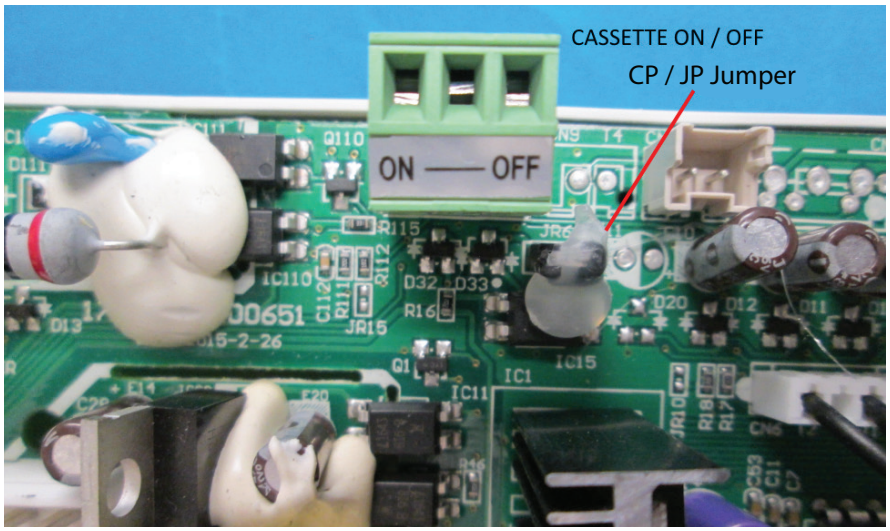
5.1. Error Code: CP

Description:	MCFA, MCFB, MMDA, MMDB, MWMA, MWMB and 3WMB models only.
General Note:	None.

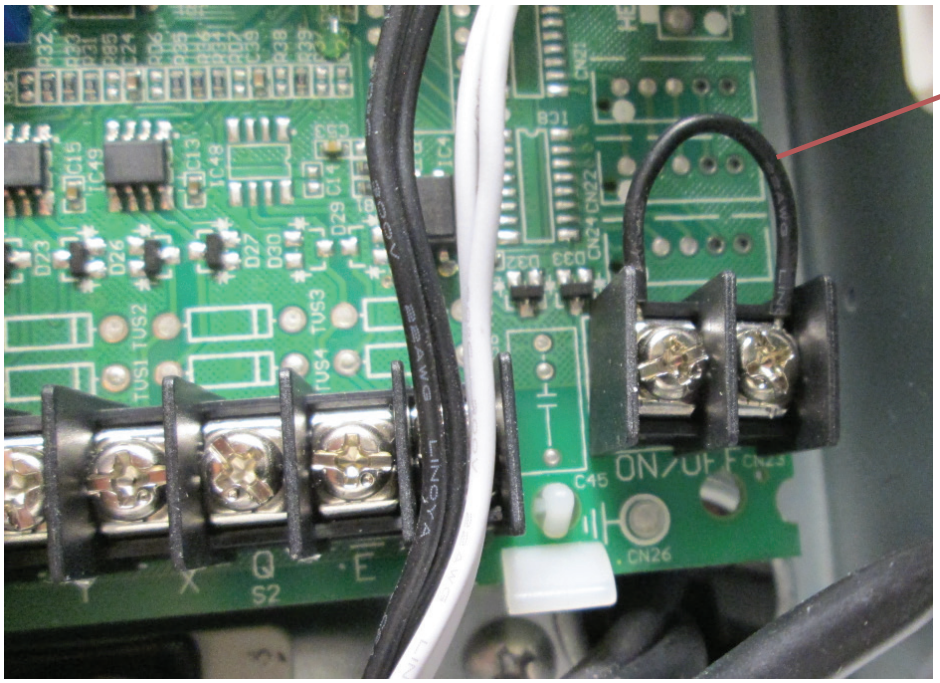
MWMA, MWMB and 3WMB



M22A, M33A and M33B

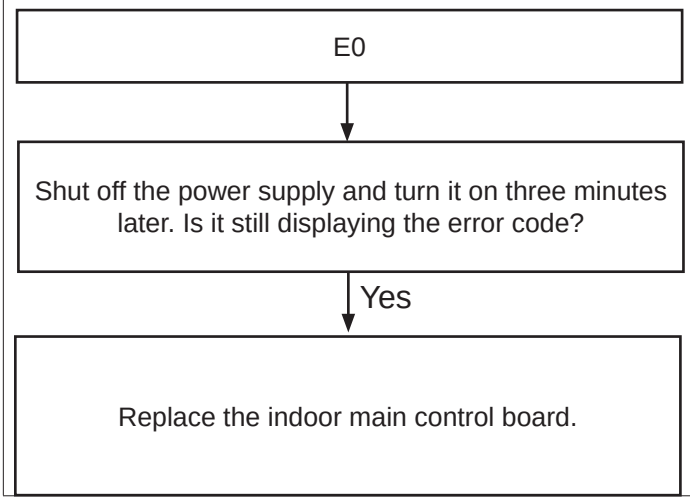


MMDA and MMDB



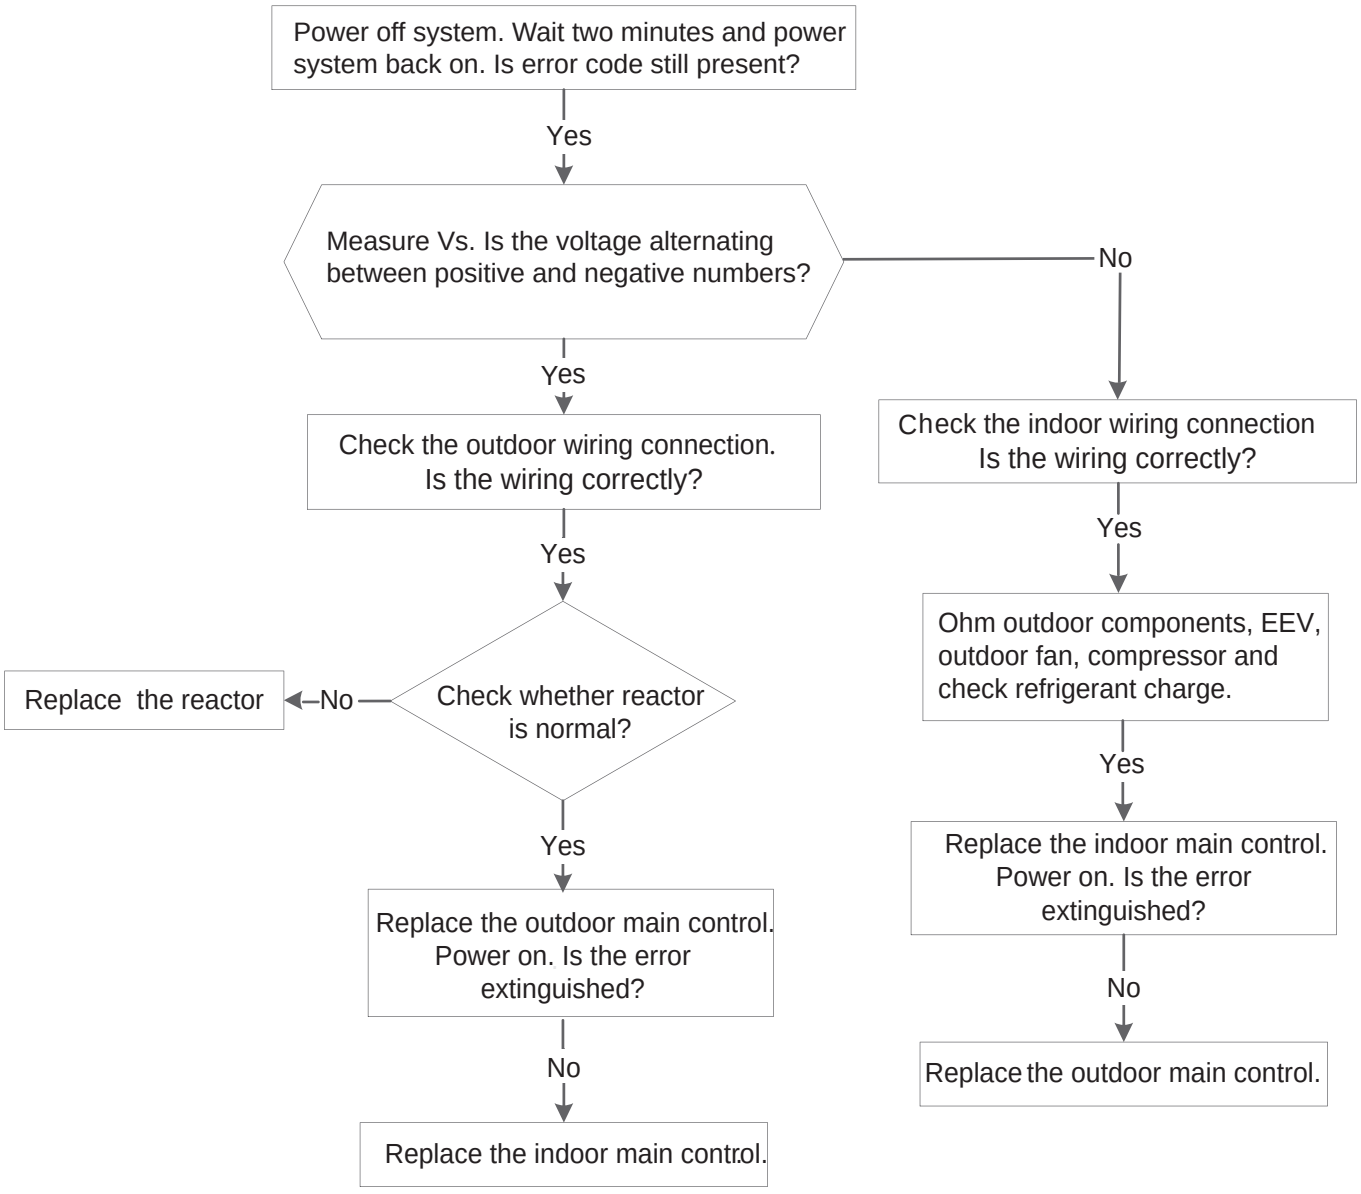
5.2. Error Code: E0

Description:	Indoor Unit EEPROM malfunction.
General Note:	Main Outdoor Control board's main chip is not receiving feedback from EEPROM chip.

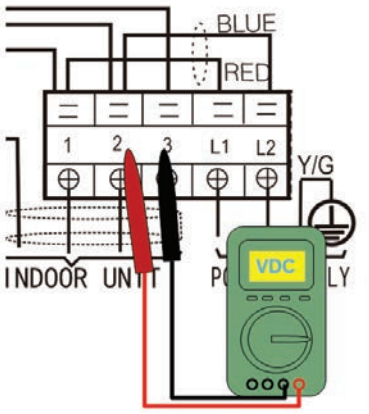


5.3. Error Code: E1

Malfunction decision conditions:	Indoor unit did not receive feedback from outdoor unit for 110 seconds and this condition has repeated four times continuously.
Supposed causes	• Wiring error • Indoor or outdoor main control board fault



Error Code:	E1 (continued)



REMARK: Use a multimeter to test the DC voltage between L2 and L3 of outdoor unit. The red pin of the multimeter connects with L2 while the black pin is for L3.

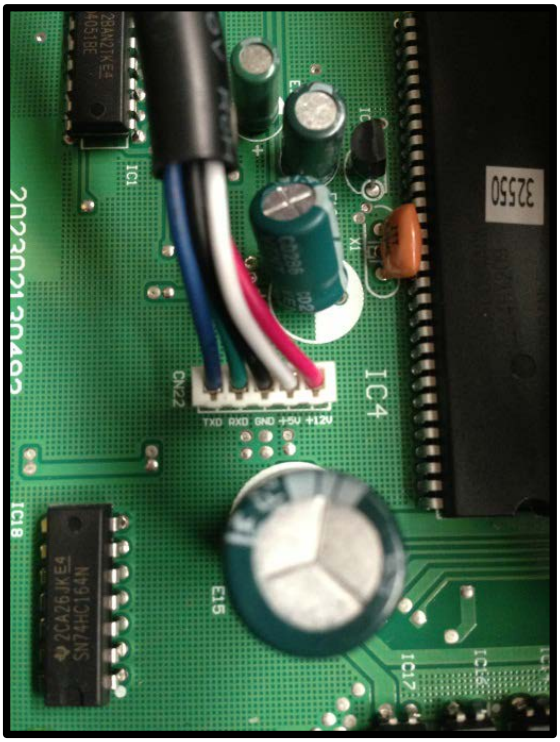
When AC is running normally, the votlage will move alternately between a negative and a positive number.

If positive reading the outdoor board needs to be replaced.

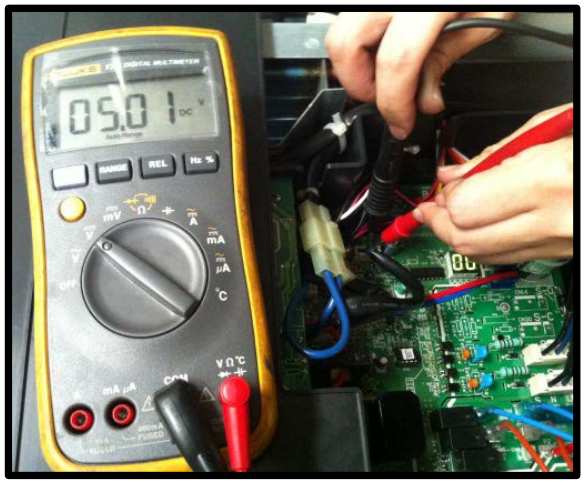
If negative reading then the indoor board needs to be replaced.

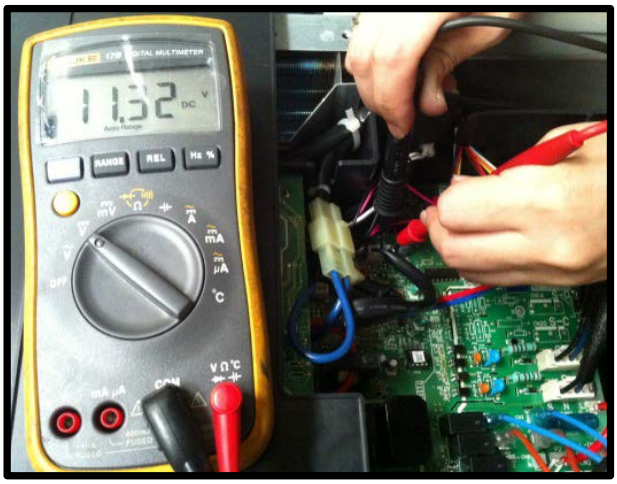
REMARK: Use a multimeter to test the resistance of the reactor which does not connect with the capacitor.
The normal value should be around zero ohm. Otherwise, the reactor has malfunctioned.

Error Code:	E1 (continued)



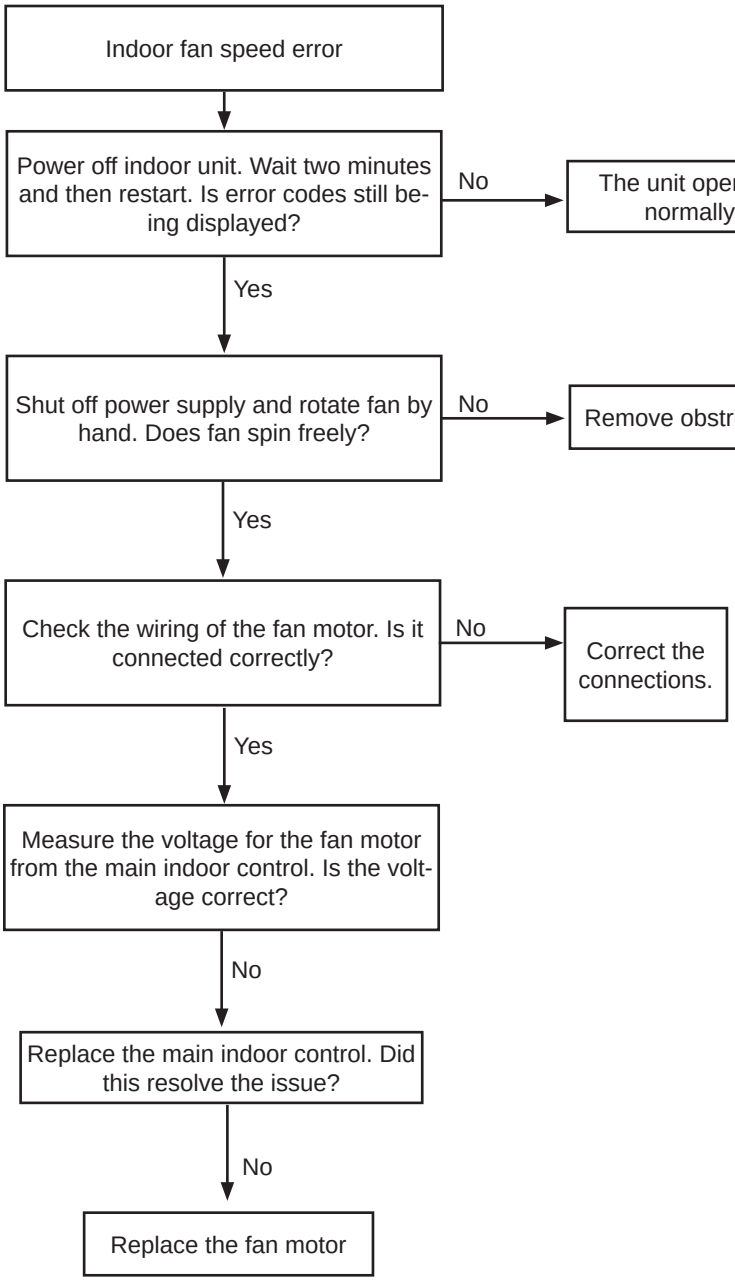
NOTE - Use a multimeter to test the DC voltage between black pin and white pin of signal wire The normal value should be around 5V.
Use a multimeter to test the DC voltage between black pin and red pin of signal wire. The normal value should be around 12V.





5.4. Error Code: E3

Description:	Indoor fan speed error.
General Note:	When indoor fan speed runs too low (300 RPM) for a predefined amount of time, the unit will stop and the LED will display the error.



Indoor DC Fan Motor Check

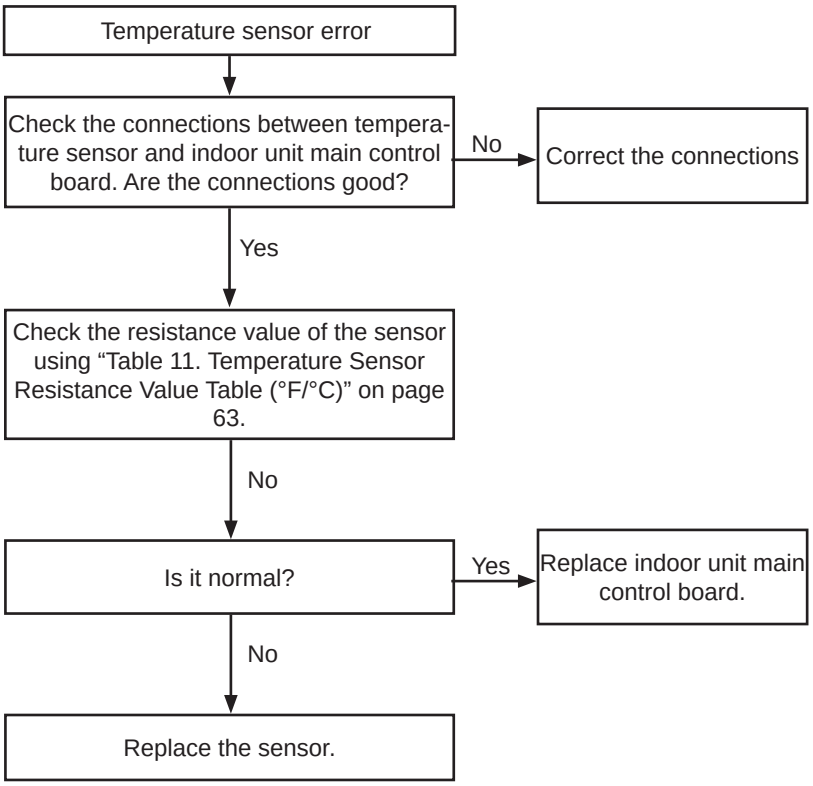
1. Indoor DC fan motor (Control Chip is in Fan Motor)
2. Turn power on and while the unit is on standby, measure the voltage between pin 1 and pin 3 as well as between pin 4 and pin 3 in fan motor connector. If the value of the voltage is not within the range shown in the following table, the indoor unit main control board may be experiencing problems and need to be replaced.

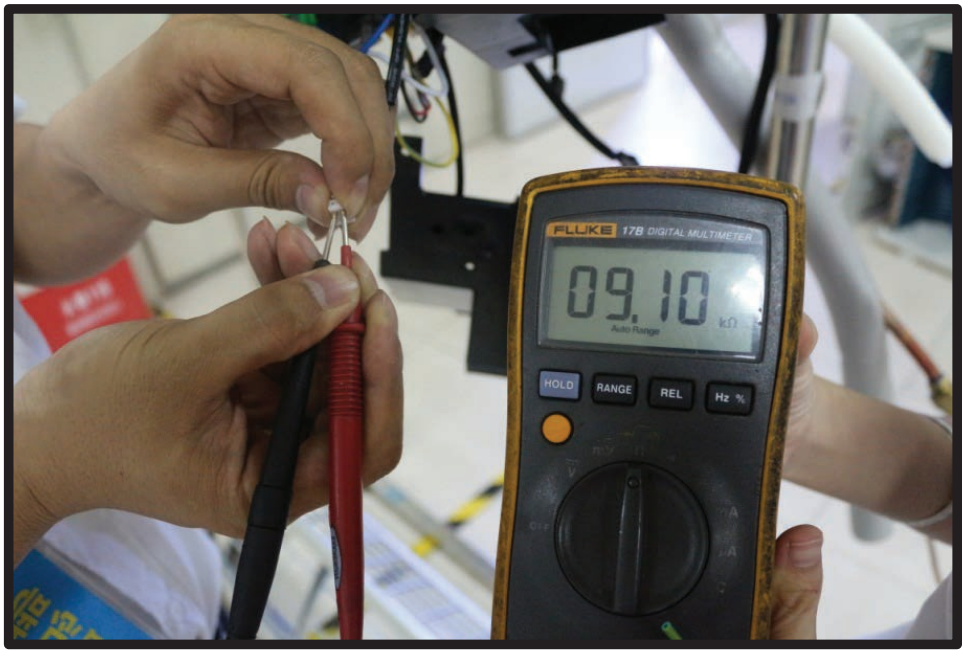
DC Motor Voltage Input and Output

NO.	Color	Signal	Voltage
1	Red	Vs/Vm	200~380V
2	---	---	---
3	Black	GND	0V
4	White	Vcc	13.5~16.5V
5	Yellow	Vsp	0~6.5V
6	Blue	FG	13.5~16.5V

5.5. Error Code: E4

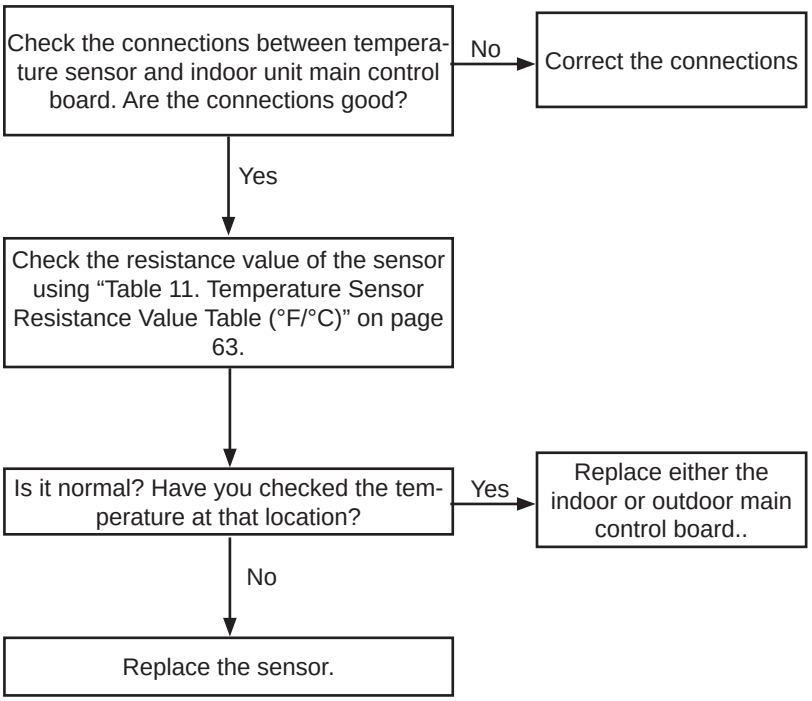
Description:	Indoor return air temperature (T1) sensor error.
General Note:	If the voltage is lower than 0.06V or higher than 4.94V, the LED will display this error.

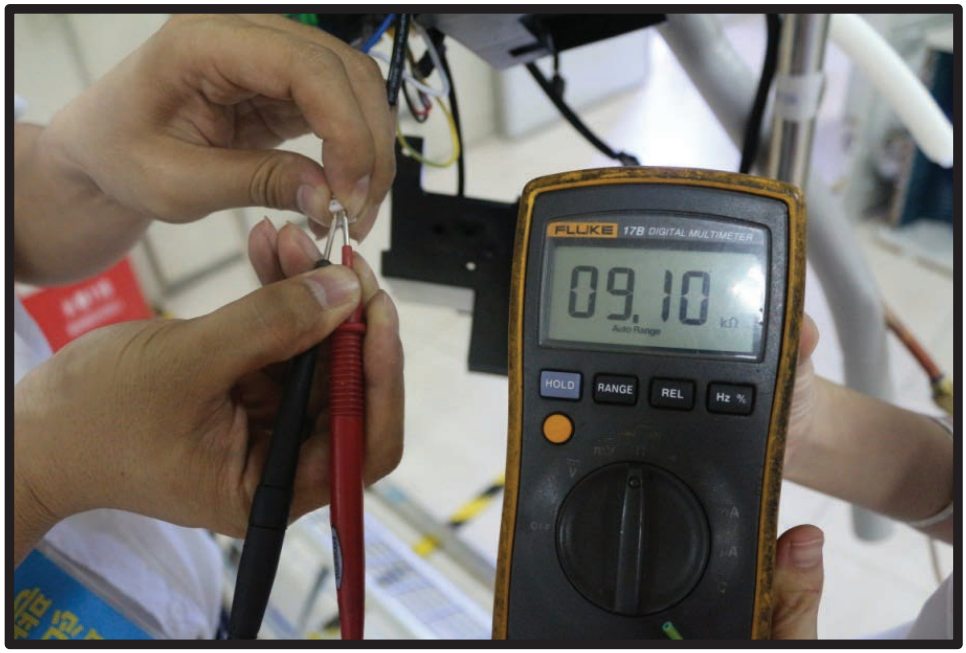




5.6. Error Code: E5

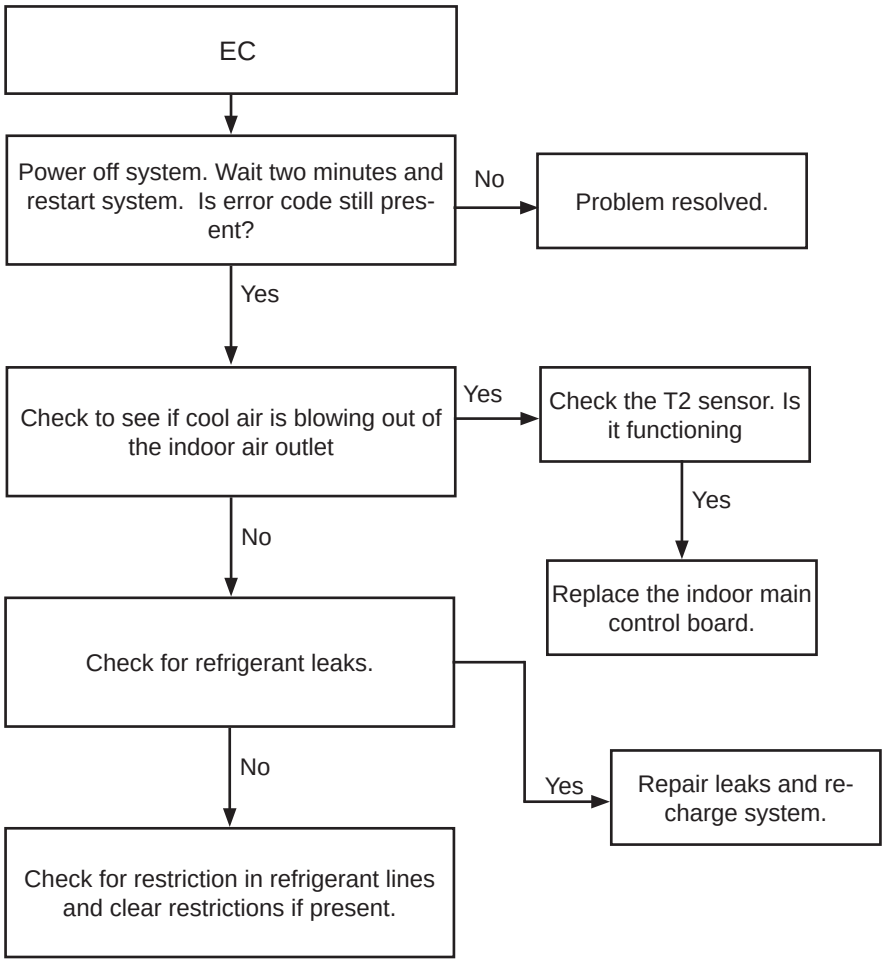
Description:	Indoor Coil Temperature (T2) Sensor Error
General Note:	If the voltage is lower than 0.06V or higher than 4.94V, the LED will display the error.





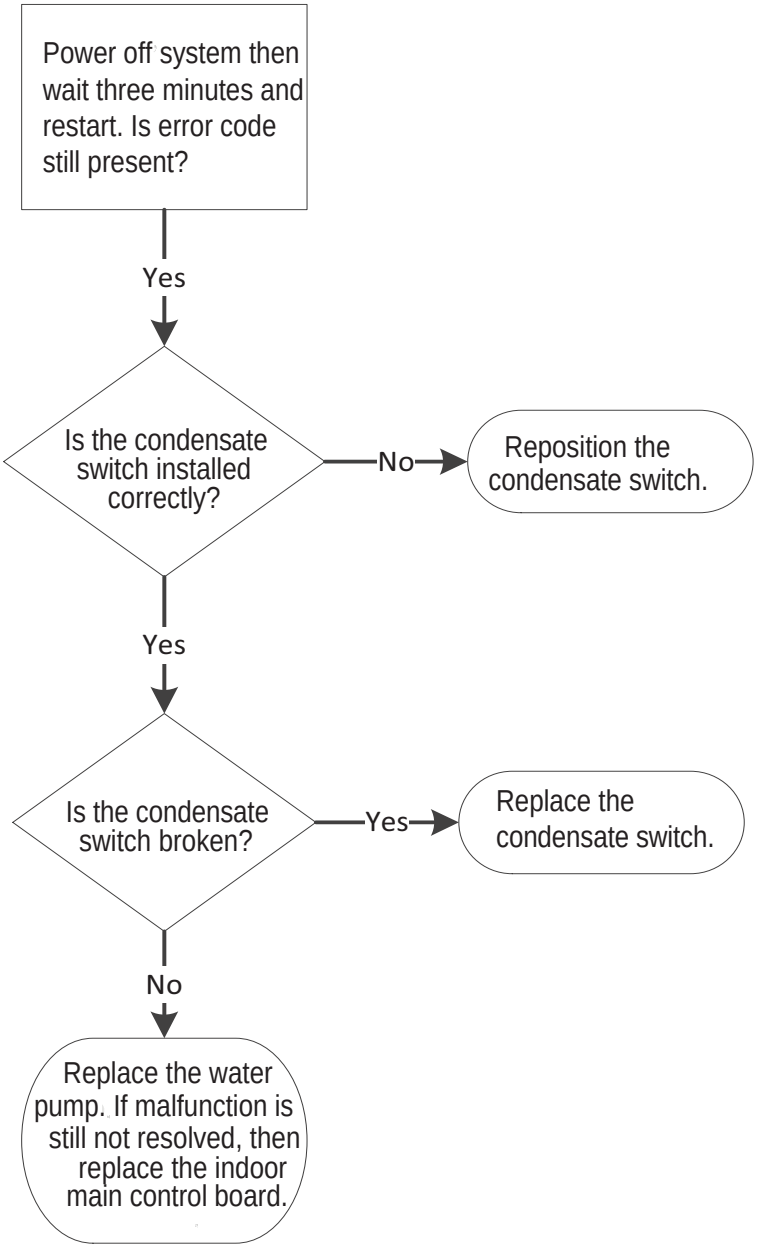
5.7. Error Code: EC

Description:	Low Refrigerant Error
General Note:	The system monitors the value of evaporator coil sensor T2 for the first 5 minutes after startup. If the temperature of T2 drops per this formula three times in the first 5 minutes of operation, the system shuts down and the error code is displayed. For this formula “Tcool” = the T2 temperature at startup. T2 < Tcool - 3.6°F (2°C)



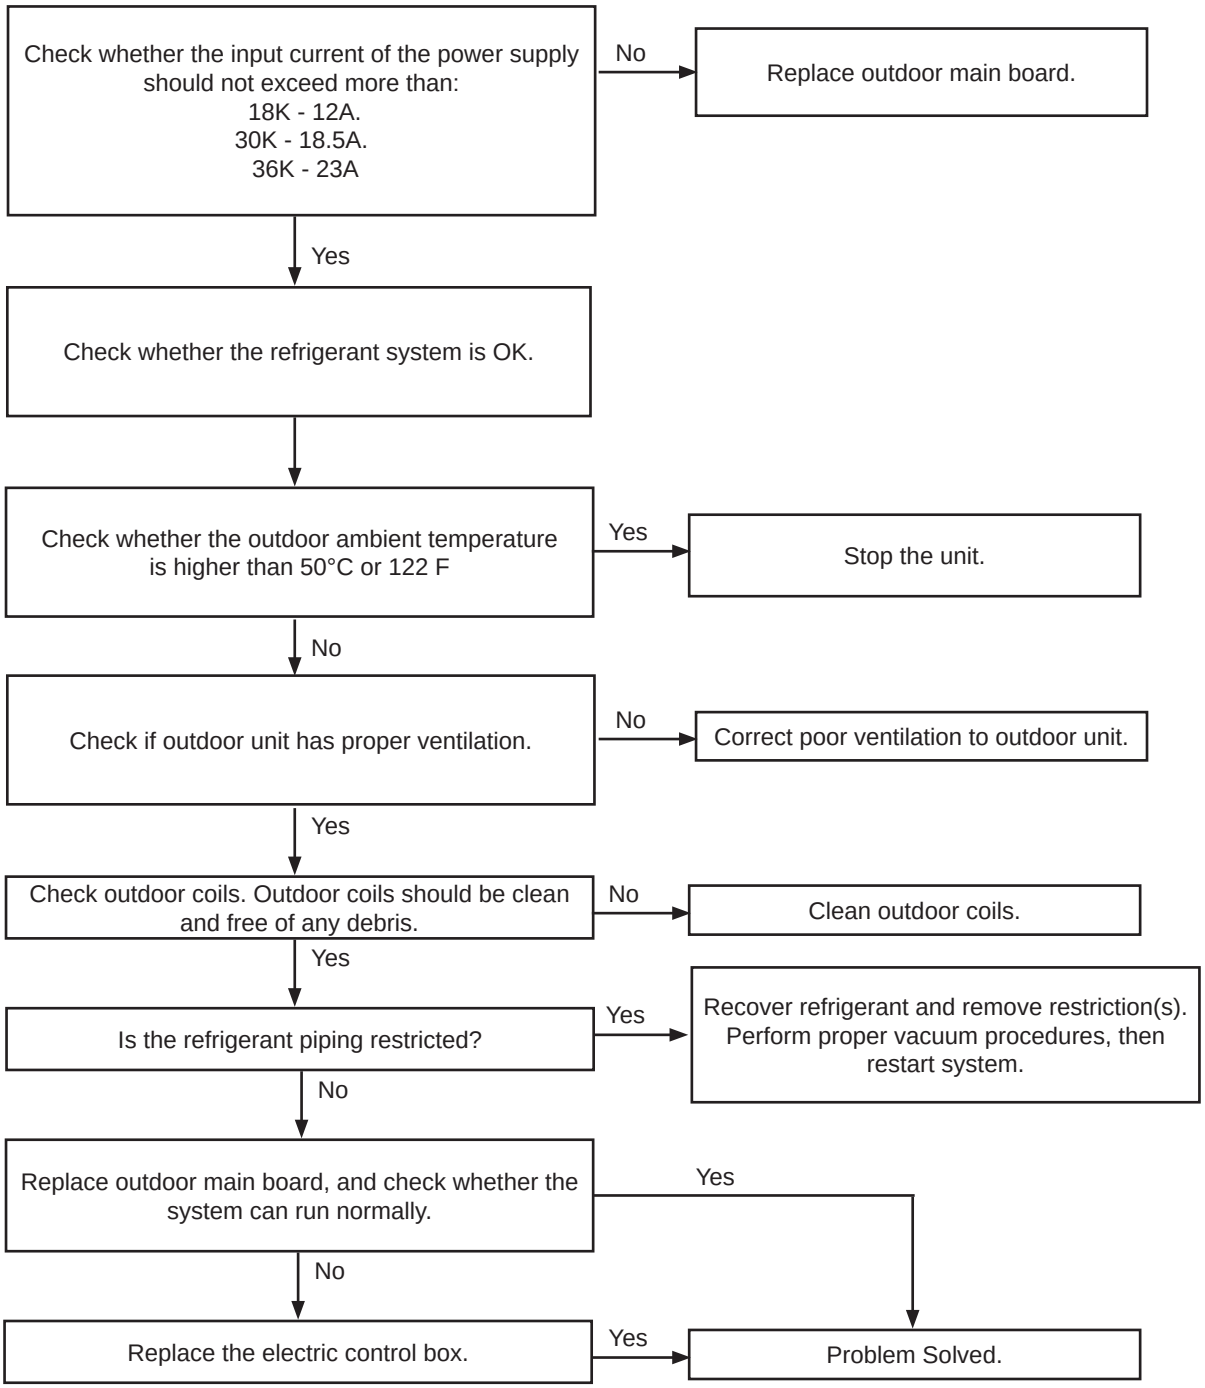
5.8. Error Code: EE

Description:	Condensate switch (water level) alarm malfunction. (For M22A, M33A/B and MMDA units)
General Note:	If the sampling voltage is not 5V, the LED will display this failure. • Wiring mistakes • Faulty water-level switch • Faulty water pump • Faulty indoor main control board. ***NOTE:*** *Float is in the down postilion unless the condensate is restricted and the float has risen.* ***NOTE:*** *Water pump runs 100% of the time when the unit is calling for cooling.*



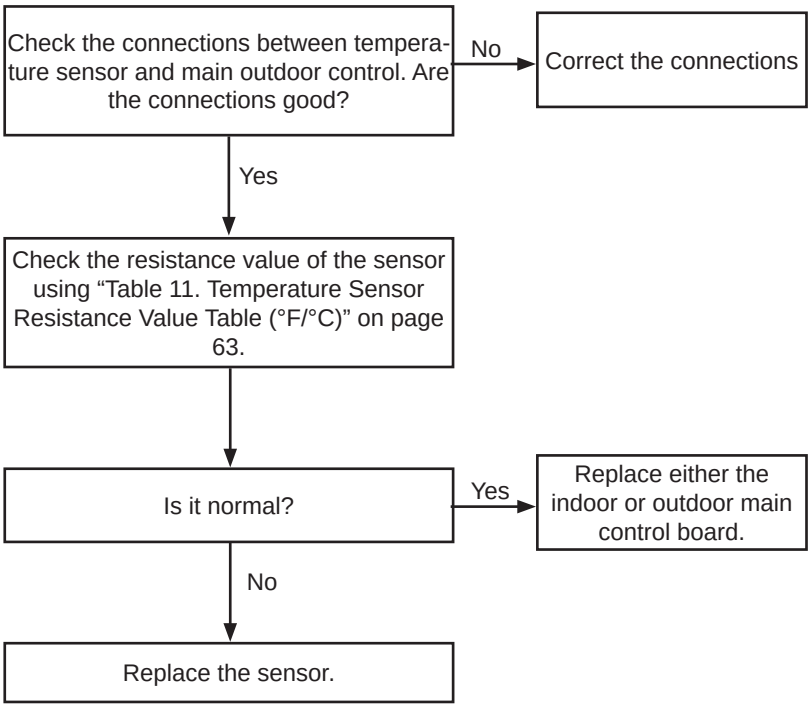
5.9. Error Code: F0

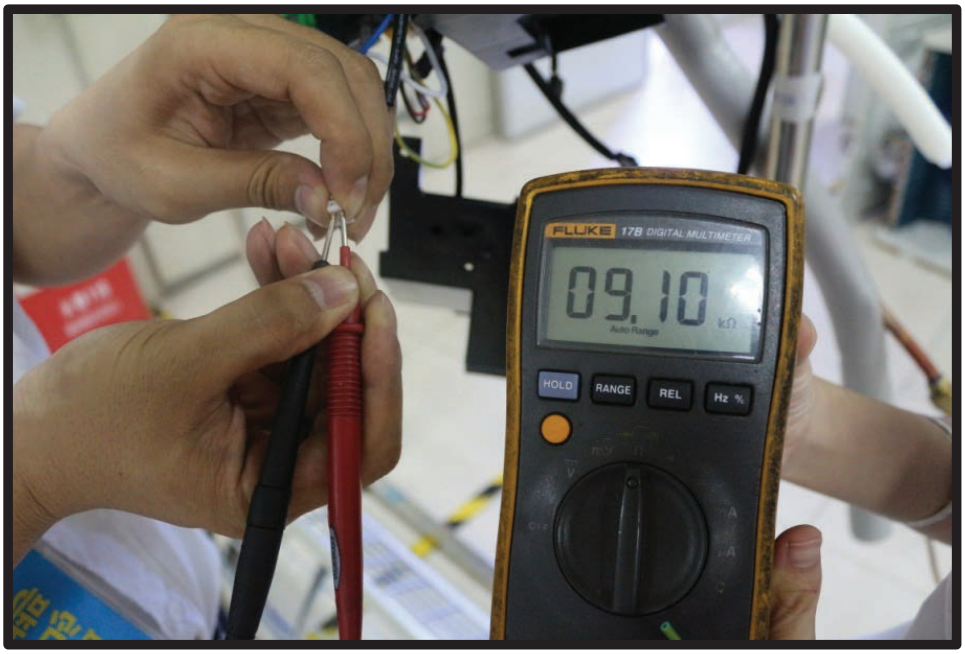
Description:	Outdoor compressor current overload sensed
General Note:	If the outdoor current exceeds the current limit value, the LED will display this failure.



5.10. Error Code: F1

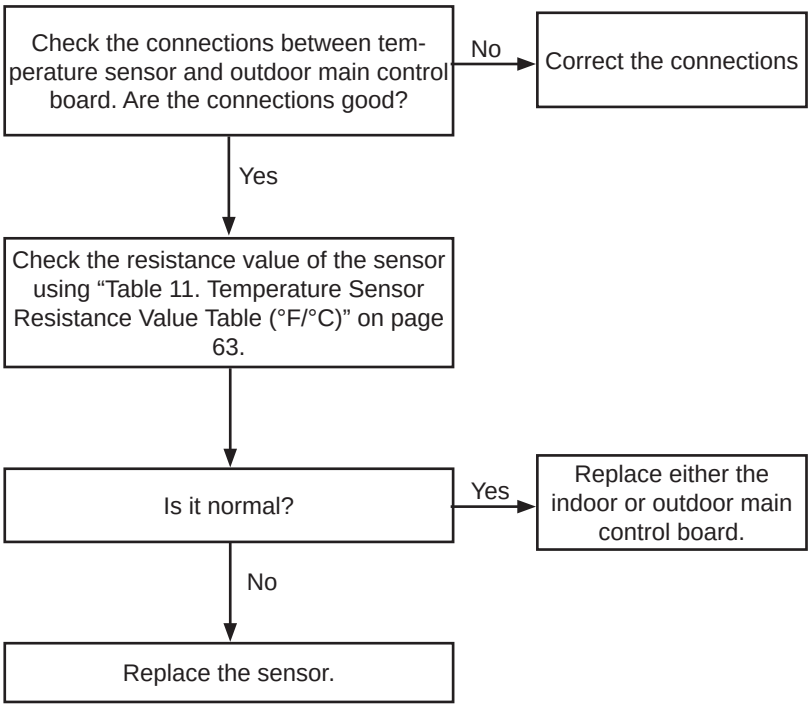
Description:	Outdoor Temperature Sensor T4 Error.
General Note:	If the voltage is lower than 0.06V or higher than 4.94V, the LED will display the error.

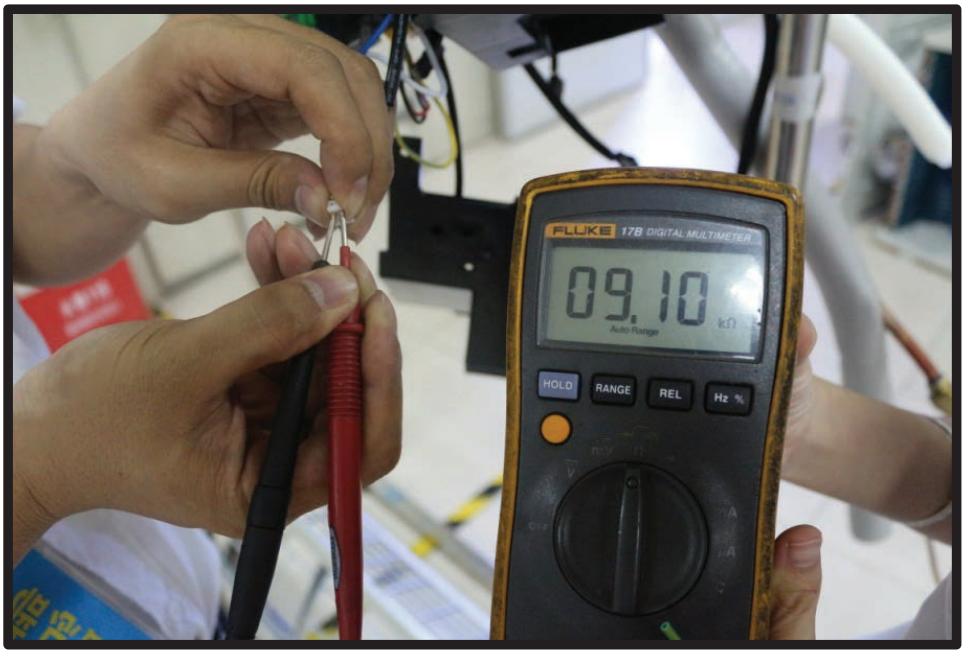




5.11. Error Code: F2

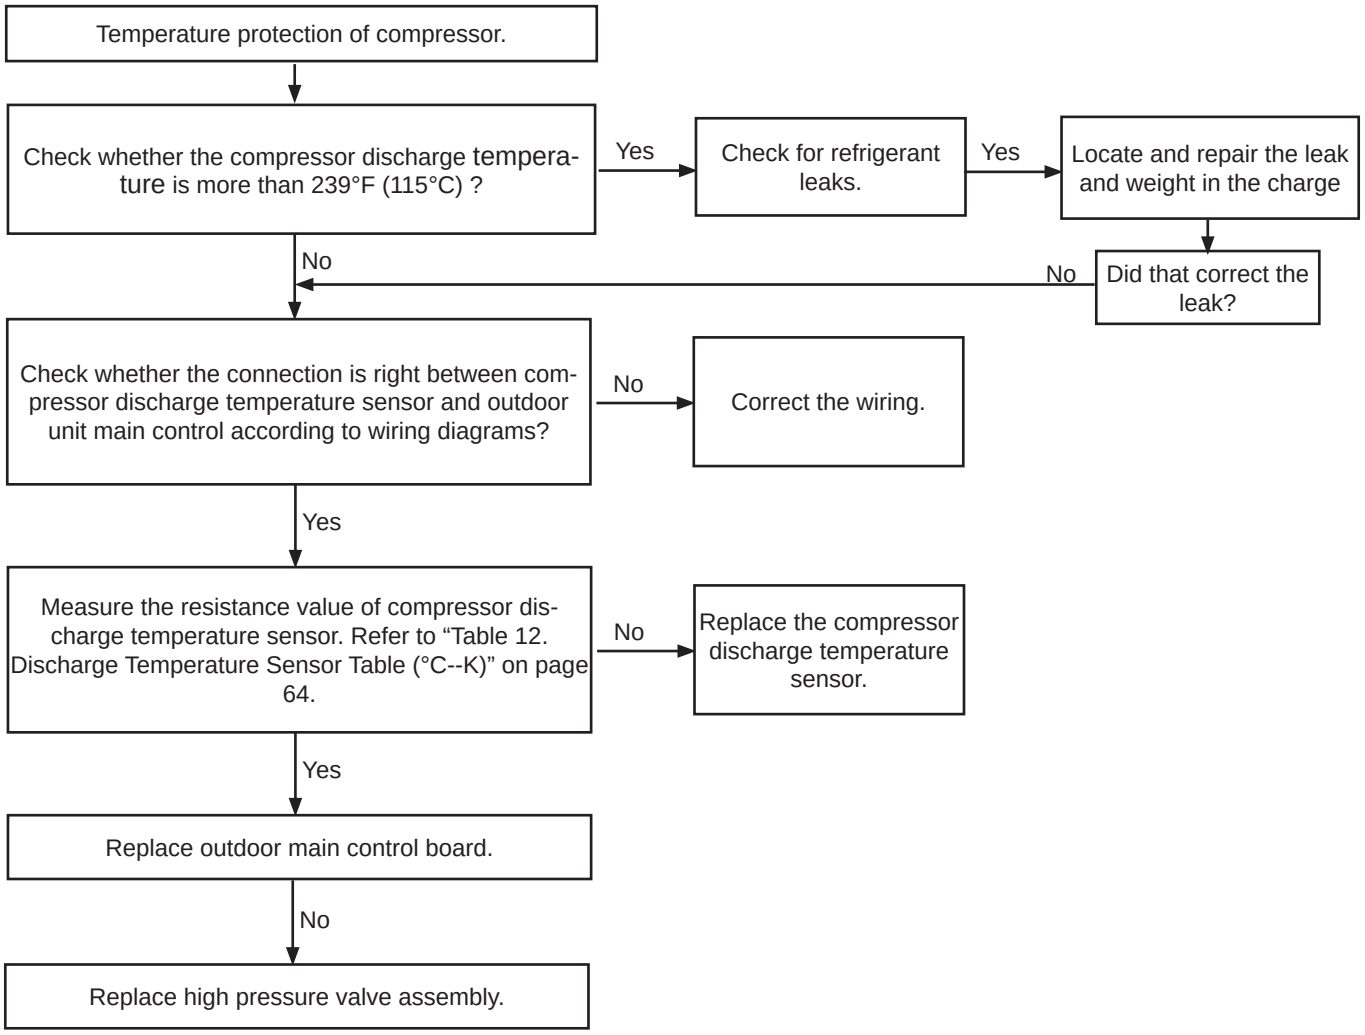
Description:	Faulty Outdoor Coil Temperature Sensor T3
General Note:	If the voltage is lower than 0.06V or higher than 4.94V, the LED will display the error.





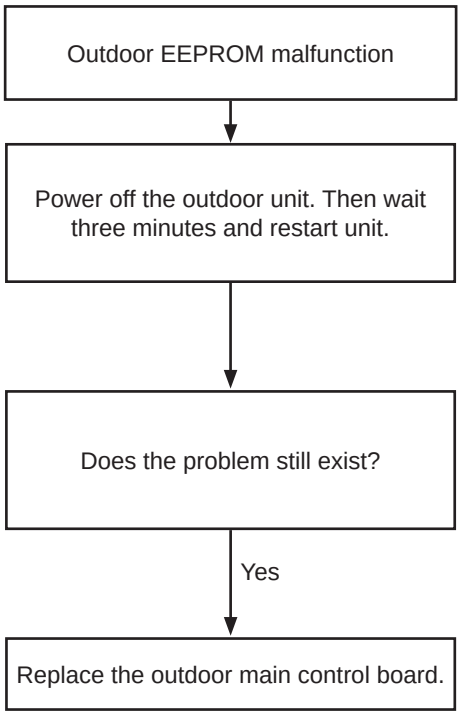
5.12. Error Code: F3

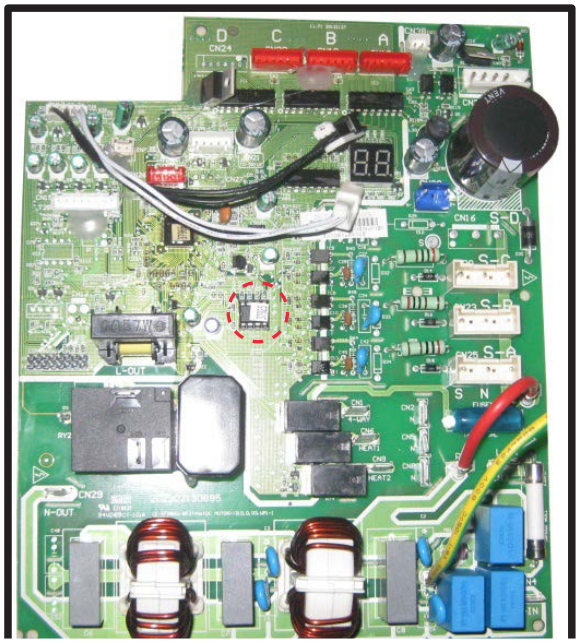
Description:	Compressor discharge temperature sensor error
General Note:	When the compressor discharge temperature (T5) is more than 239°F (115°C) for 10 seconds, the compressor will stop and restart once T5 is less than 194°F (90°C).



5.13. Error Code: F4

Description:	Outdoor EEPROM error.
General Note:	Main outdoor control board main chip is not receiving feedback from EEPROM chip. For the location of EEPROM chip, please refer to the below image.

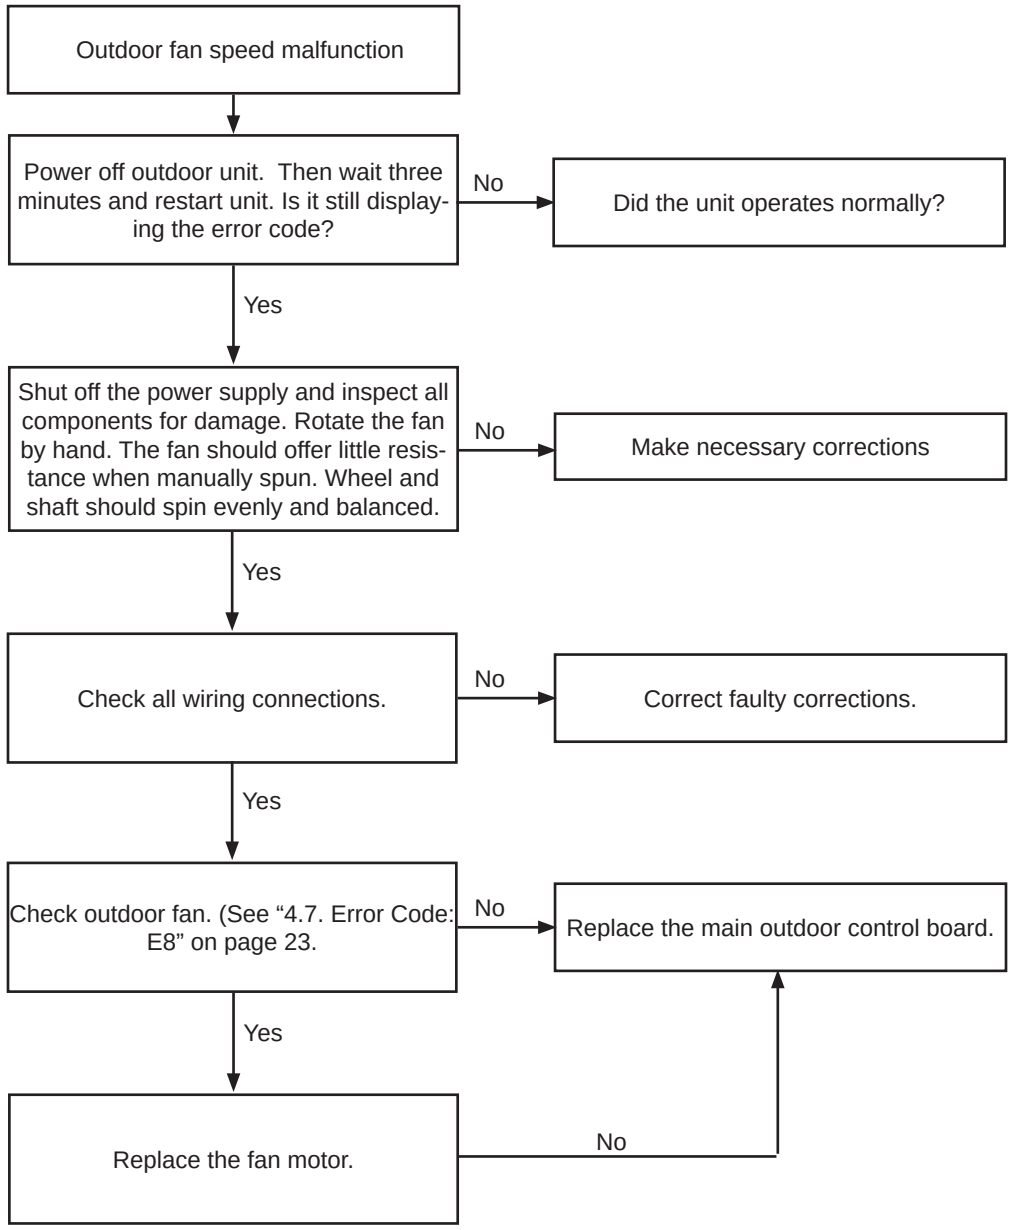




Outdoor PCB(M3OC-30HRFN1-M)

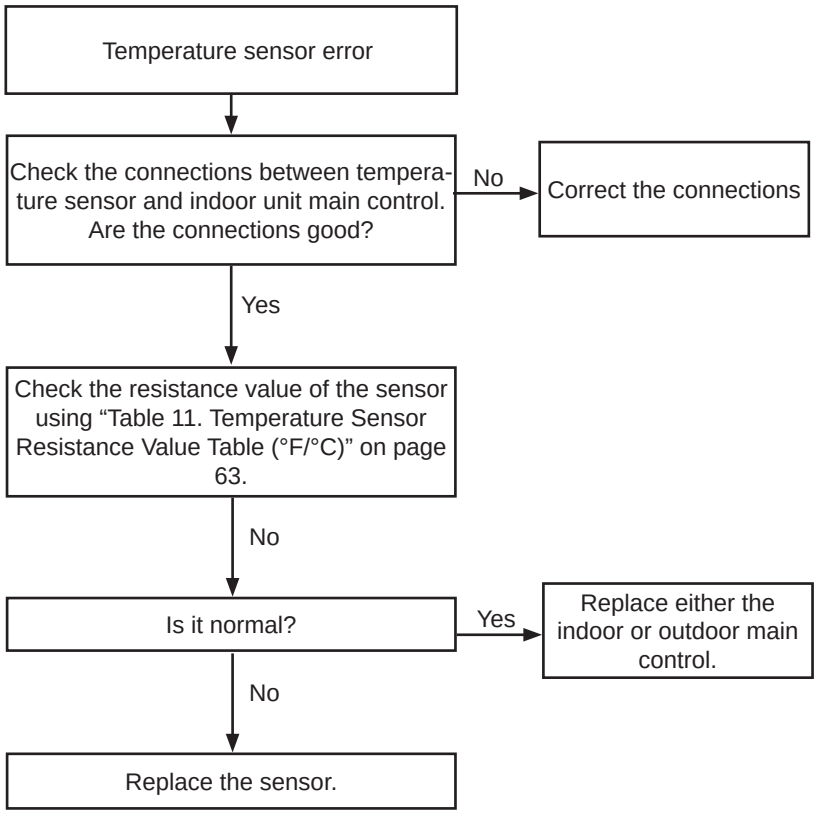
5.14. Error Code: F5

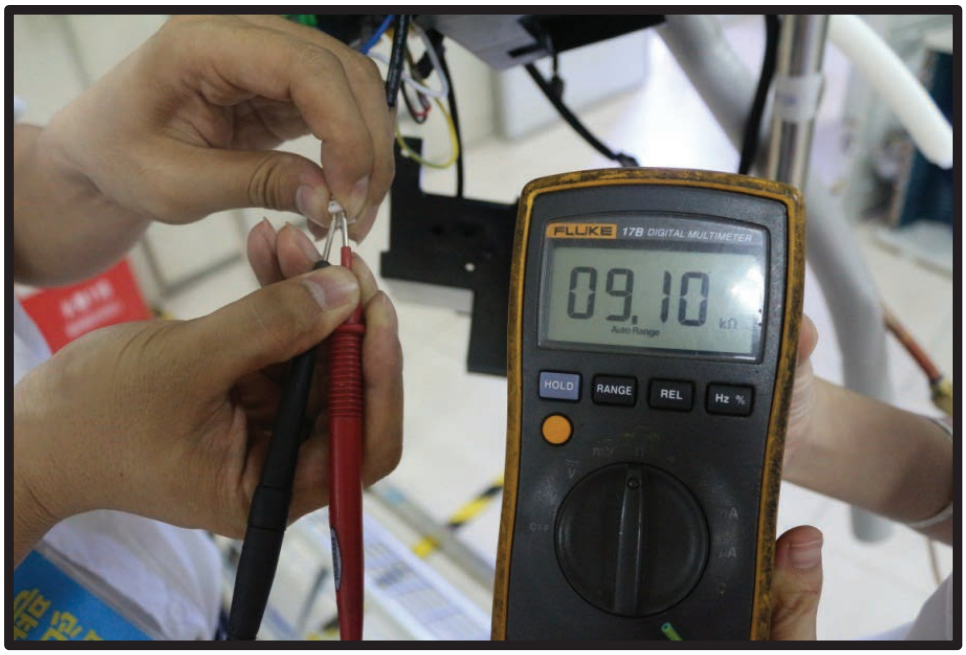
Description:	Outdoor unit fan speed error
General Note:	When outdoor fan speed is to slow (300 RPM) or too fast (2400 RPM) for a predefined amount of time. The unit will stop and the LED will display the failure.



5.15. Error Code: F6

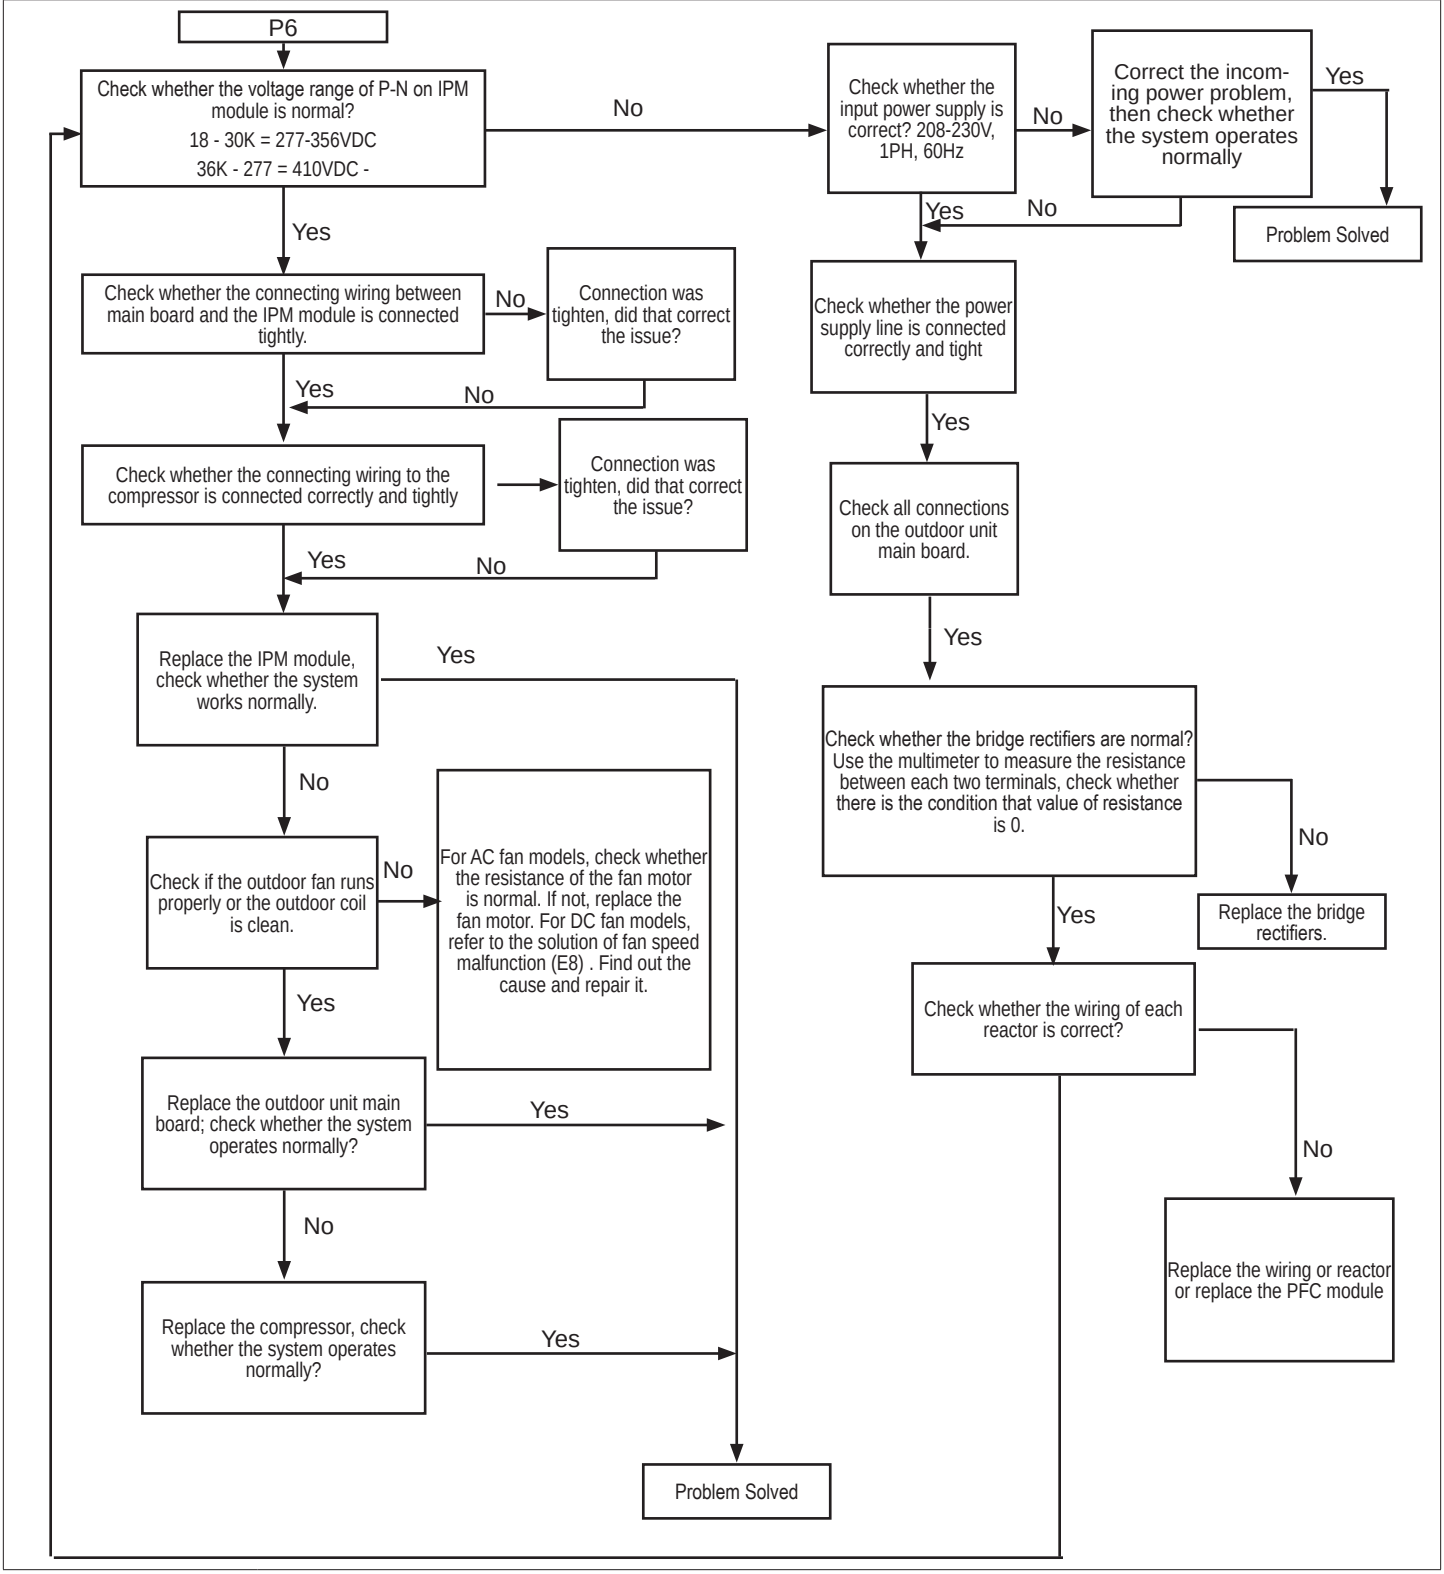
Description:	Indoor Unit Evaporator Outlet Coil Temperature (T2) Sensor Faulty
General Note:	If the voltage is lower than 0.06V or higher than 4.94V, the LED will display the error.



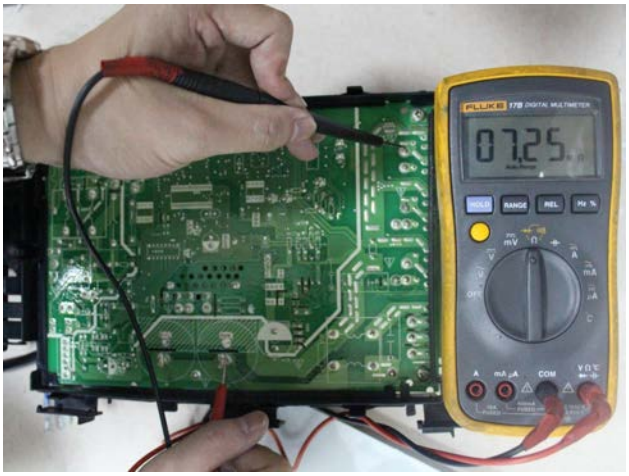


5.16. Error Code: P0

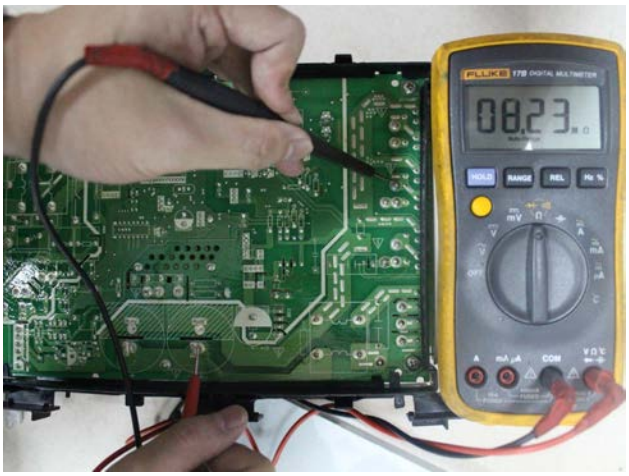
Description:	Integrate Power Module (IPM) module or Insulated gate bipolar transistor (IGBT) over current protection.
General Note:	When the voltage signal that IPM sends to the compressor drive chip is abnormal, the display LED will show “P6” and unit will turn Off.



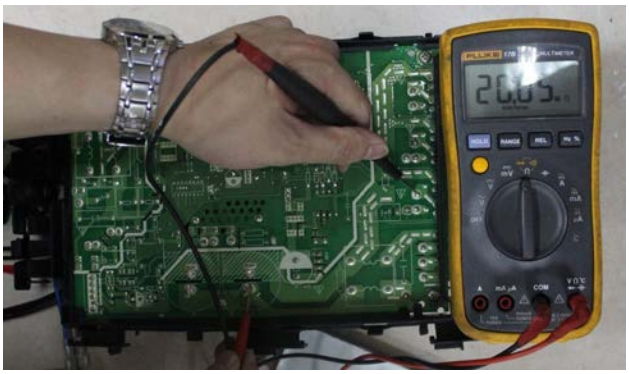
Error Code:	P0 (continued)



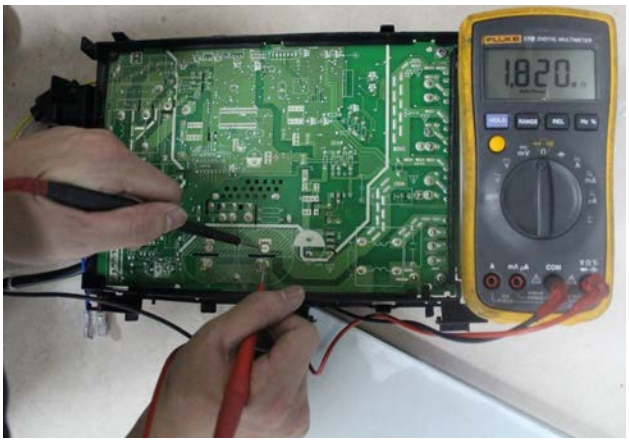
P-U



P-V



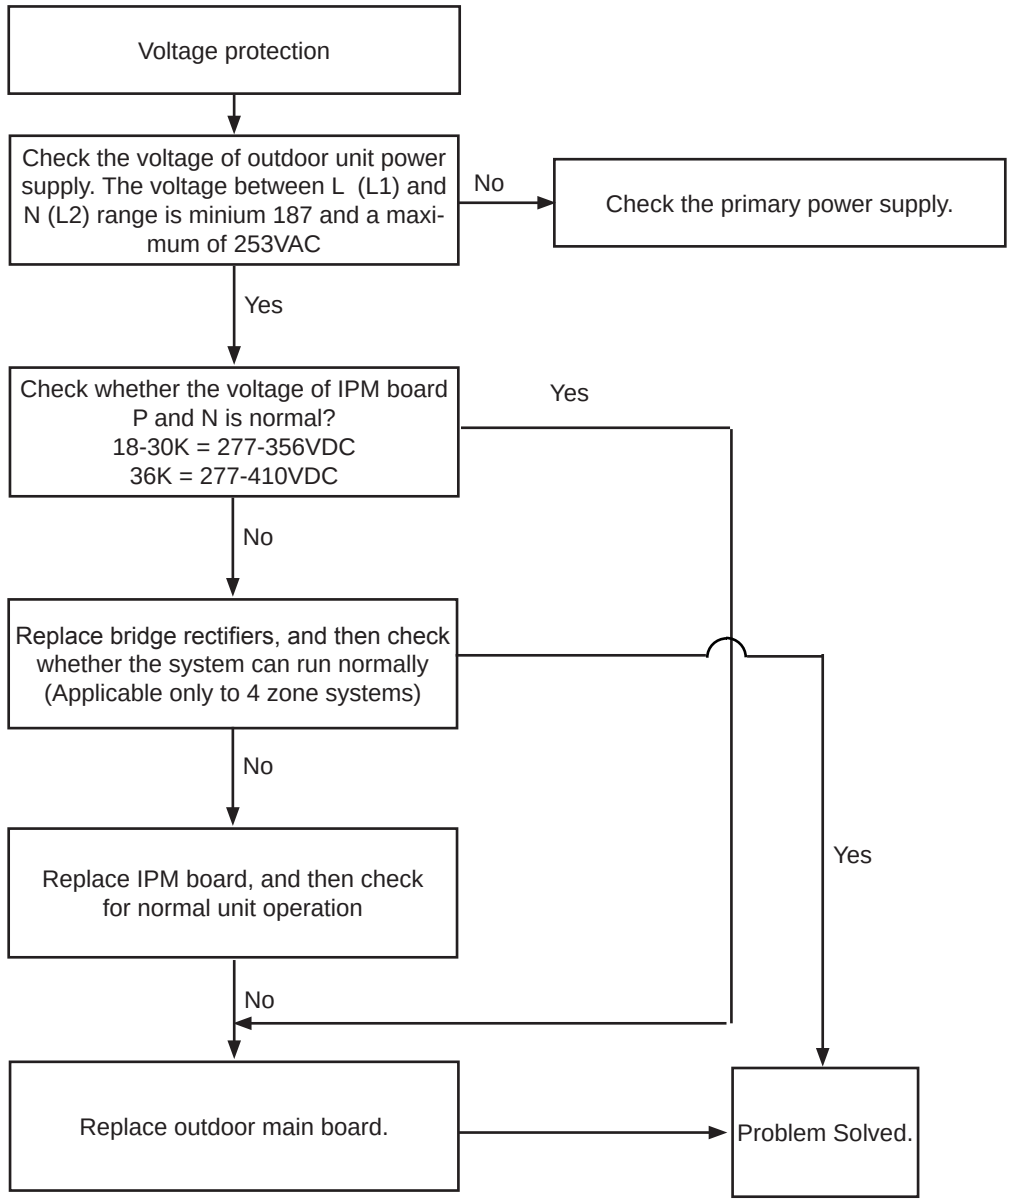
P-W



P-N

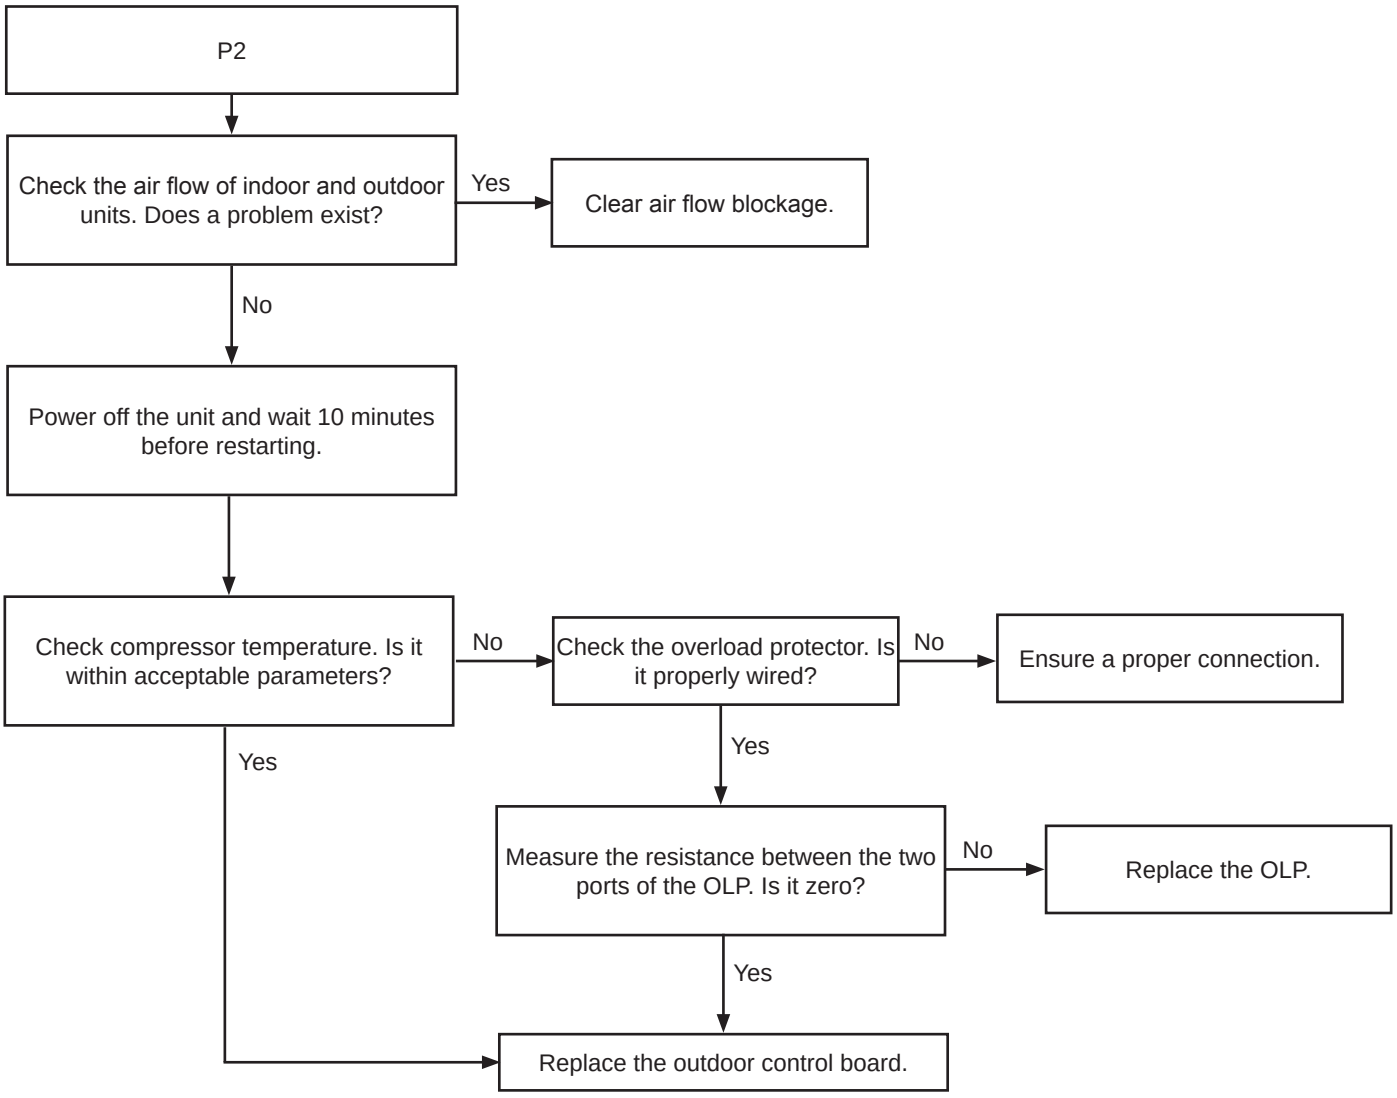
5.17. Error Code: P1

Description:	High or Low voltage protection
General Note:	An abnormal voltage rise or drop is detected by checking the specified voltage detection circuit.



5.18. Error Code: P2

Description:	Compressor top high temperature protection (OLP)
General Note:	If the sampling voltage is not 5V, the LED will display the P2 error code.

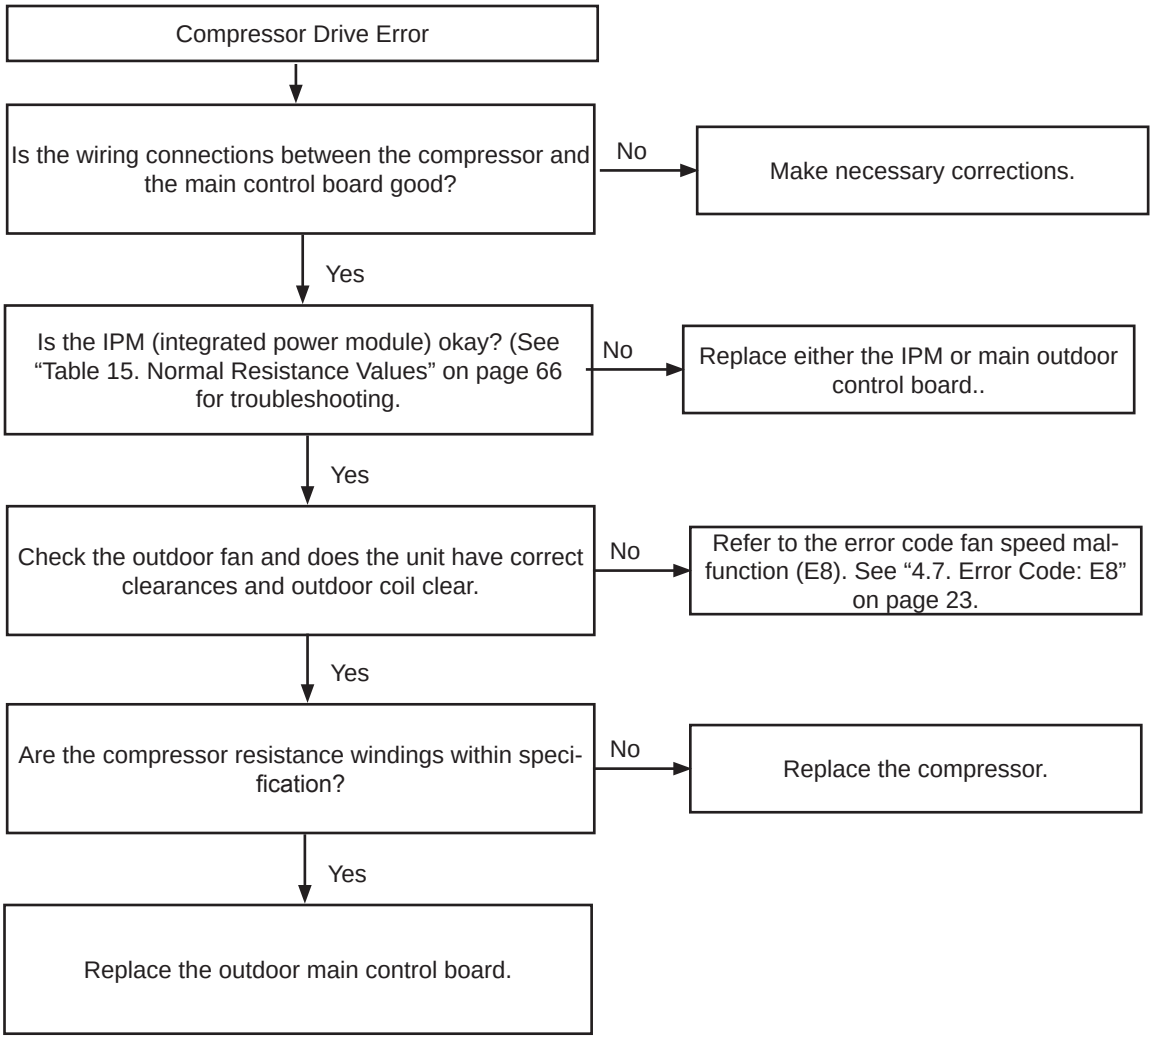


5.19. Error Code: P3

Description:	Outdoor unit low temperature lockout.
General Note:	The outdoor unit will lockout in heating mode when the outdoor temperature is lower than -13°F (-25°C) for one hour, on MPA and MPB units. For MLA unit the lockout occurs at -22 F. The outdoor unit will resume operation when either: • Outdoor temperature is higher than -7.6°F (-22°C) for 10 minutes and compressor has been stopped for one hour • Outdoor temperature is higher than 23°F (-5°C) for 10 minutes

5.20. Error Code: P4

Description:	Compressor Drive Error
General Note:	An abnormal inverter compressor drive is detected by a special detection circuit, including communication signal detection, voltage detection, compressor rotation speed signal detection and etc



5.21. Error Code: P5

Description:	Mode conflict.
General Note:	The indoor units cannot work cooling mode and heating mode at the same time in multi-zone applications. Heating mode has priority. • Suppose indoor unit A working in cooling mode or fan mode, and indoor unit B is set to heating mode, then A will change to Off and B will work in heating mode. • Suppose indoor unit A working in heating mode, and indoor unit B is set to cooling mode or fan mode, then B will change to stand by and A will be no change.

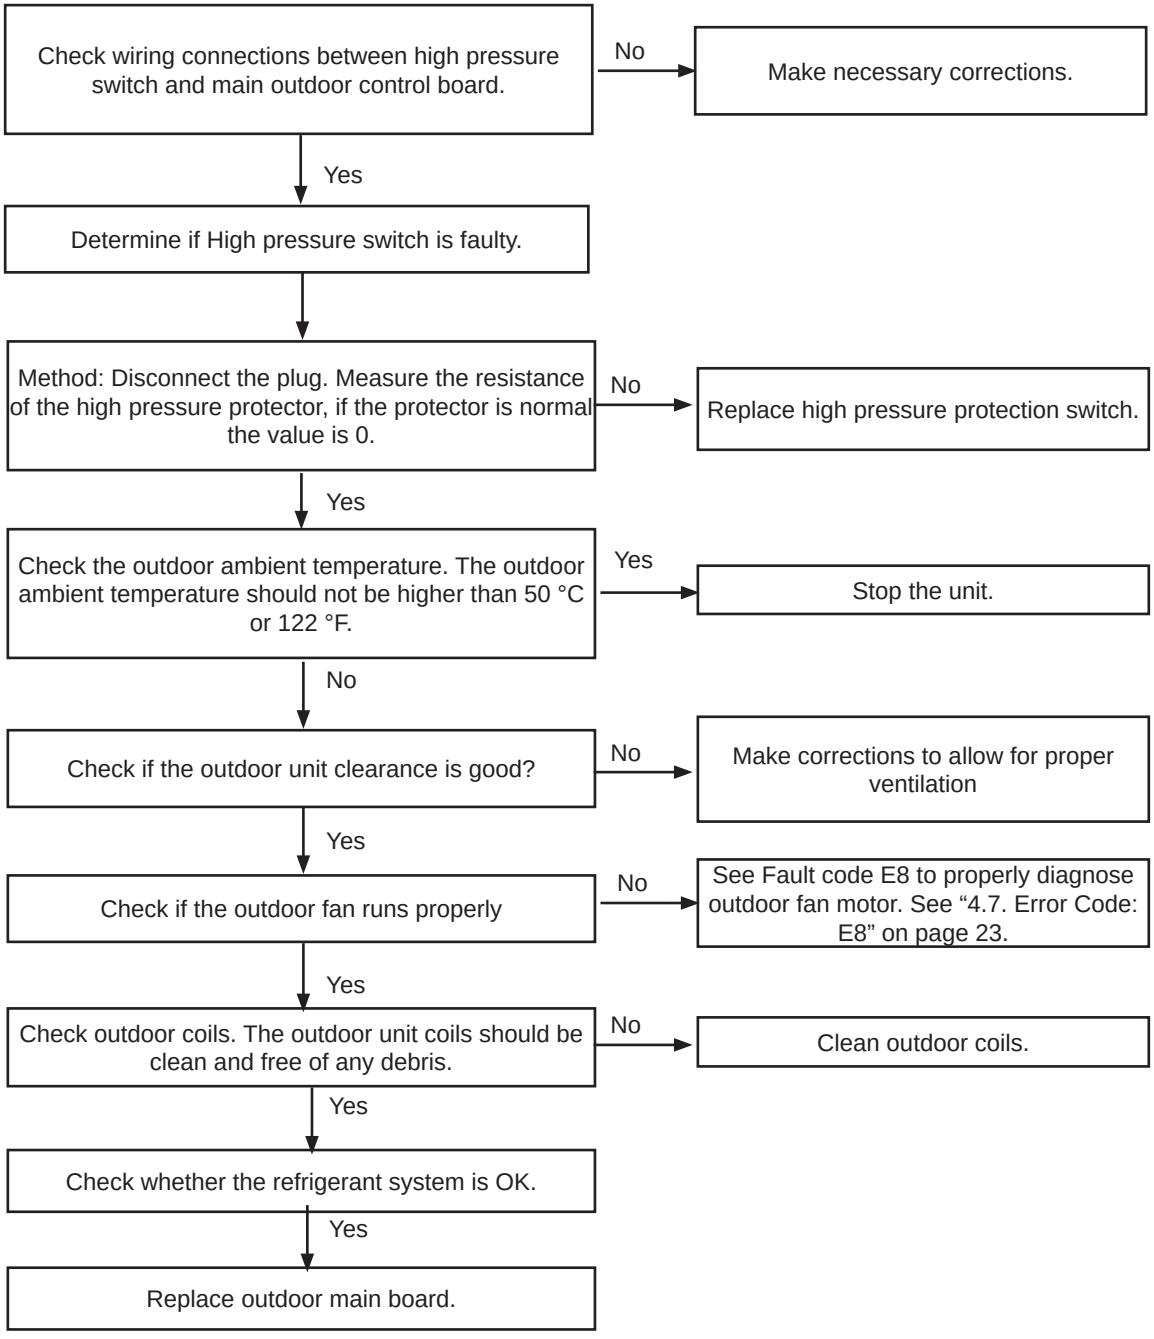
	Cooling mode	Heating mode	Fan	Off
Cooling Mode	No	Yes	No	No
Heating Mode	Yes	No	Yes	No
Fan	No	Yes	No	No
Off	No	No	No	No

No = No mode conflict.

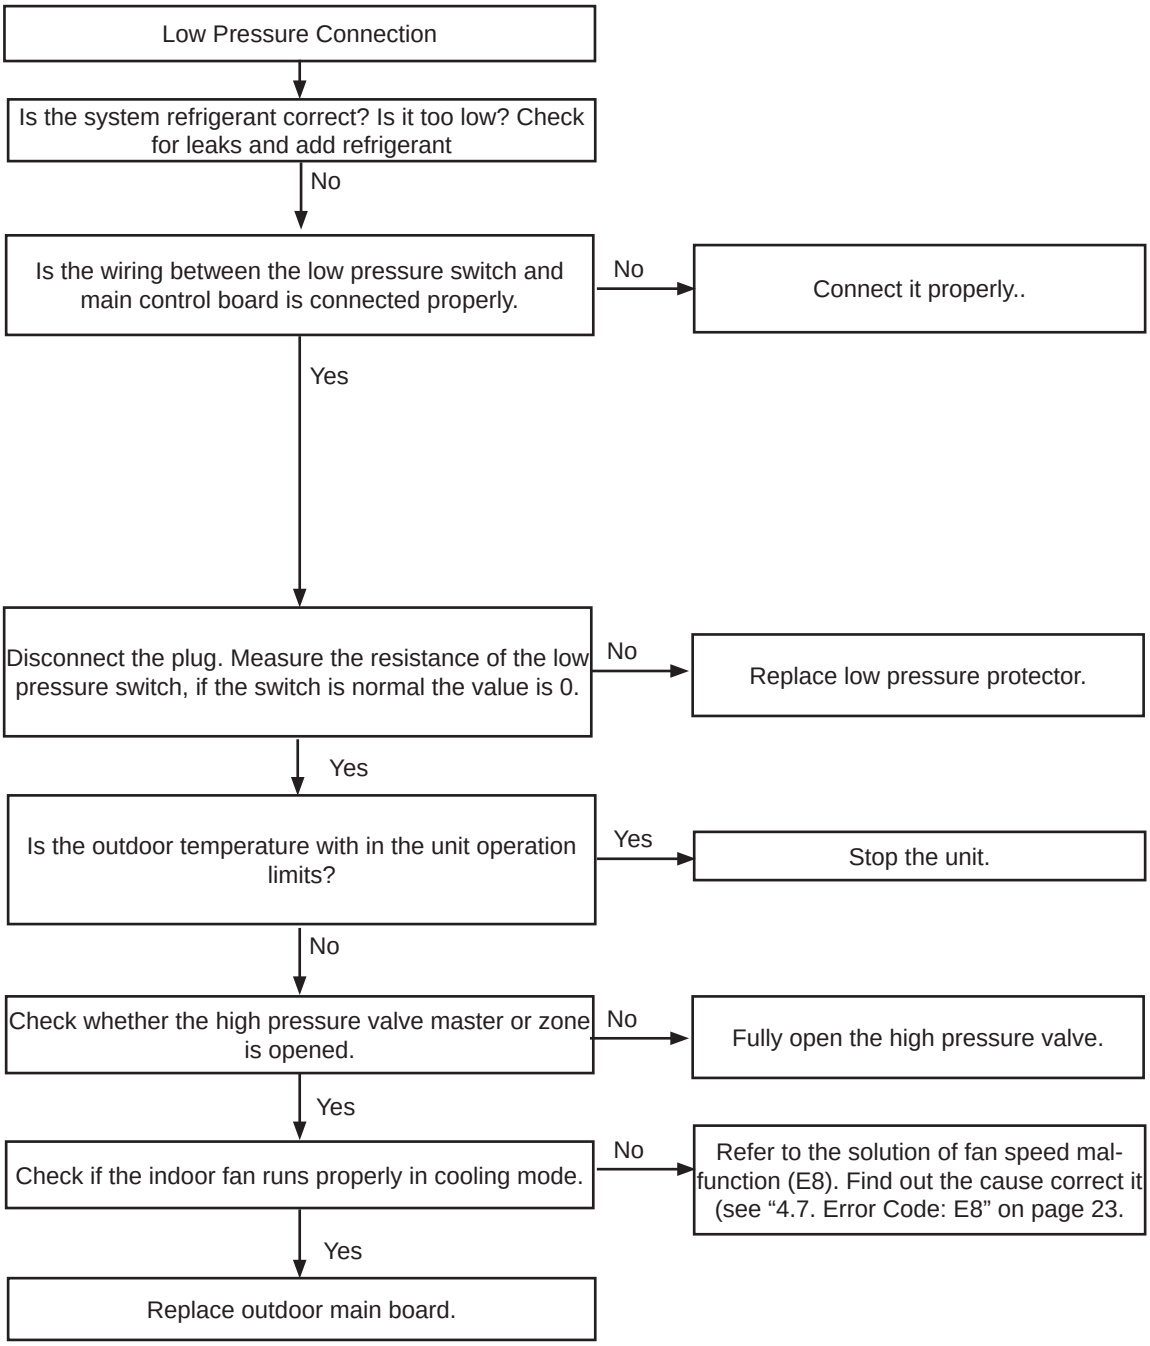
Yes = Mode conflict

5.22. Error Code: P6

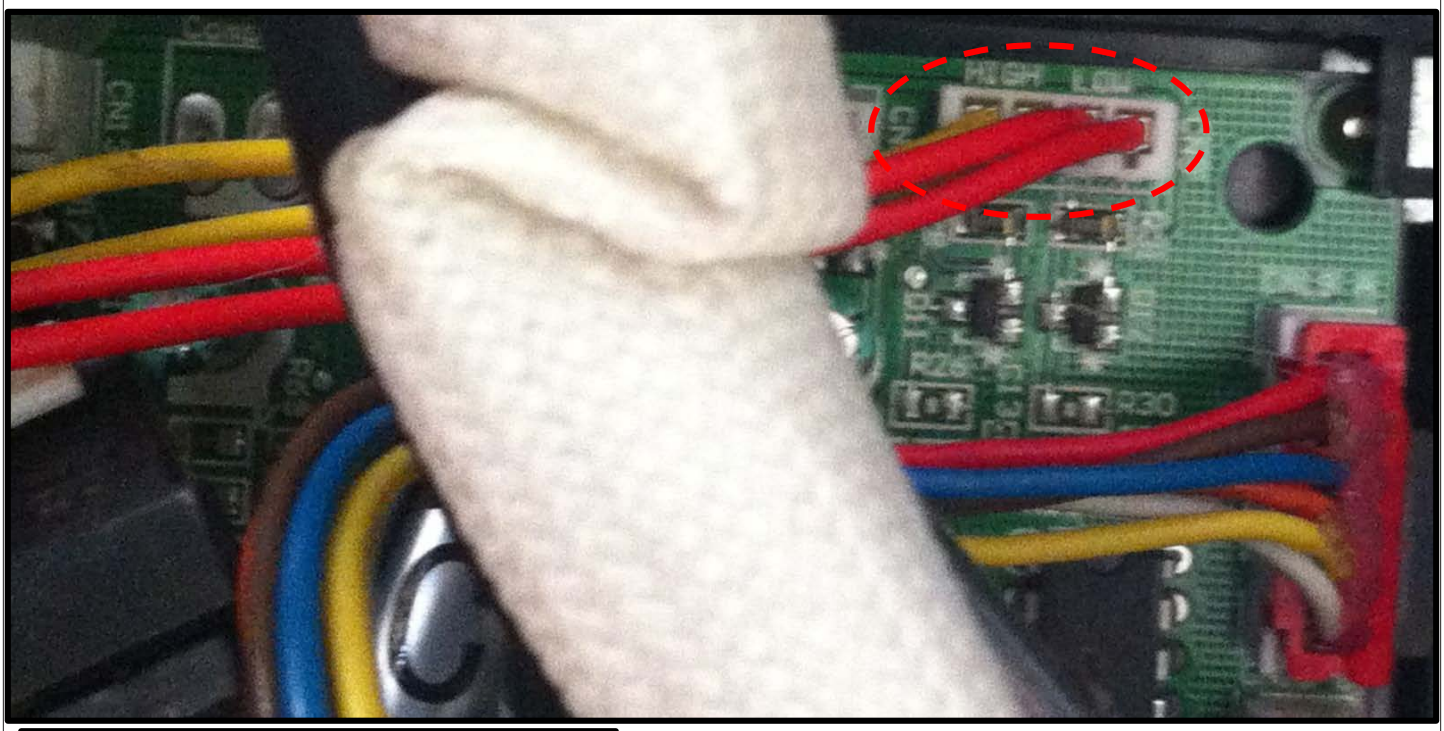
Description:	Compressor high-pressure or low-pressure switch open
General Note:	If the sampling voltage of pressure switch is not 5V, the LED will display the failure. Test each pressure switch separately following the two provided flow charts.

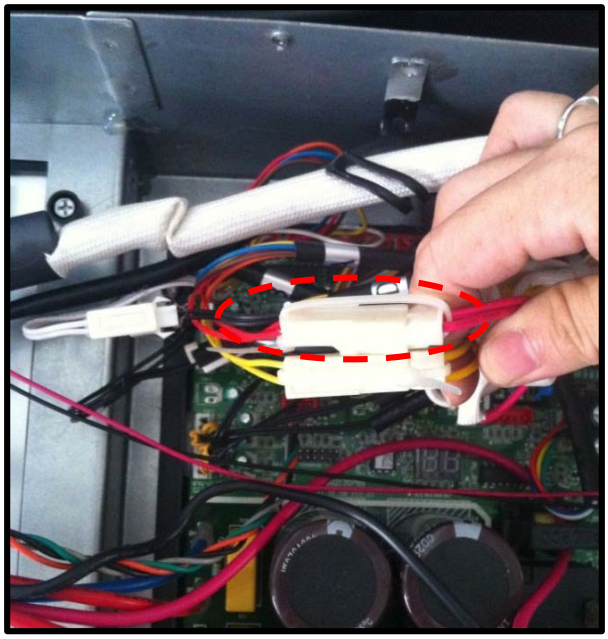


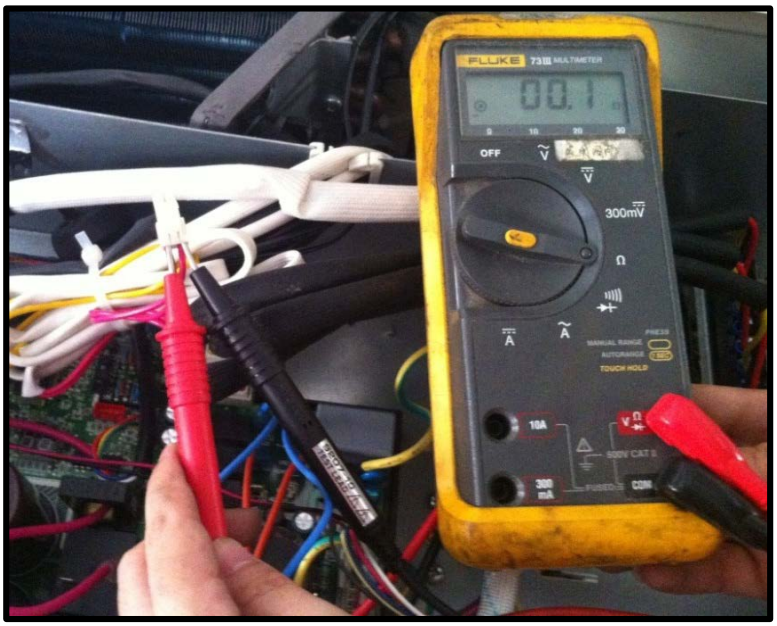
Error Code:	P6 (continued)



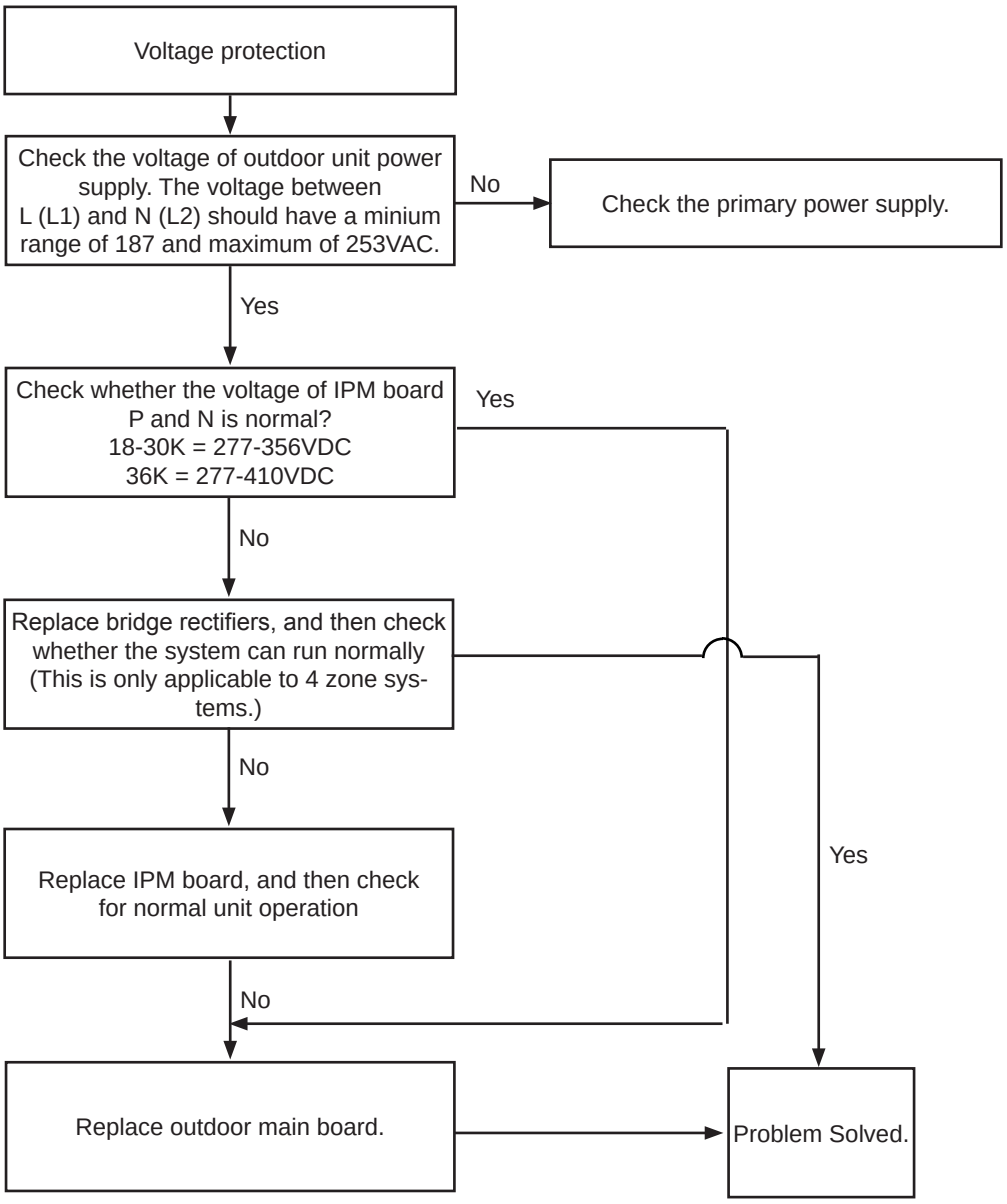
Error Code:	P6 (continued)







6. Over-Voltage or Under-Voltage Protection Diagnosis and Solution



7. Temperature Sensor Resistance Values

Table 11. Temperature Sensor Resistance Value Table (°F/°C)

9. Temperature Sensor Identification Table

Table 13. Temperature Sensor Identification Table

Sensor Number	Sensor Name
T1	ID Return Air
T2	Indoor Coil
T2B	Coil temperature of indoor heat exchanger outlet. (Located in outdoor unit)
T3	Outdoor Coil
T4	OD ambient temp
T5	Compressor Discharge

10. Component Diagnostics

10.1. Compressor Check

Measure the resistance value of each winding by using the tester. This can also be used to check for shorted compressor windings, and identifying terminals when they are no longer legible.

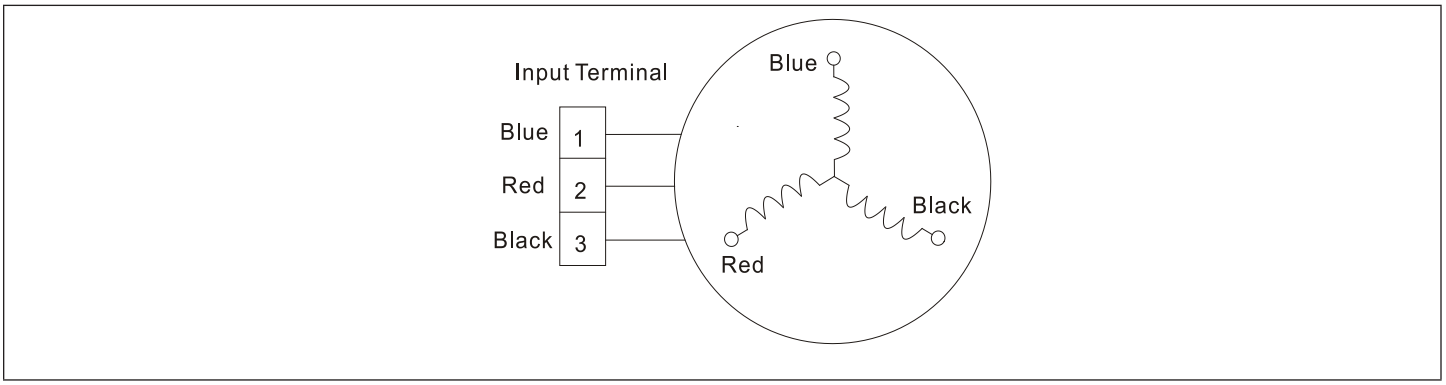

Figure 4. Compressor Terminals

Table 14. Model / Compressor Cross-Reference

10.2. IPM Check

Measure the resistance value of each winding by using the tester.

Turn off the power, let the large capacity electrolytic capacitors discharge completely, and unplug the IPM. Use a digital tester to measure the resistance between P and UVWN; UVW and N.

Table 15. Normal Resistance Values

Digital Tester		Normal Resistance Value	Digital Tester		Normal Resistance Value
(+)Red	(-)Black		(+)Red	(-)Black	
P	N	∞ (Several MΩ)	U	N	∞ (Several MΩ)
	U		V		
	V		W		
	W		(+)Red		

NOTE:*Any Meg ohm reading is good*

Figure 5. Testing

10.3. Fan Motors

10.3.1. AC Fan Motor

Power on and set the unit running in fan mode at high fan speed. After running for 15 seconds, measure the voltage of pin 1 and pin 2. If the value of the voltage is less than 100V (208~240V power supply) or 50V(115V power supply), the main control board may have issues and will need to be replaced.

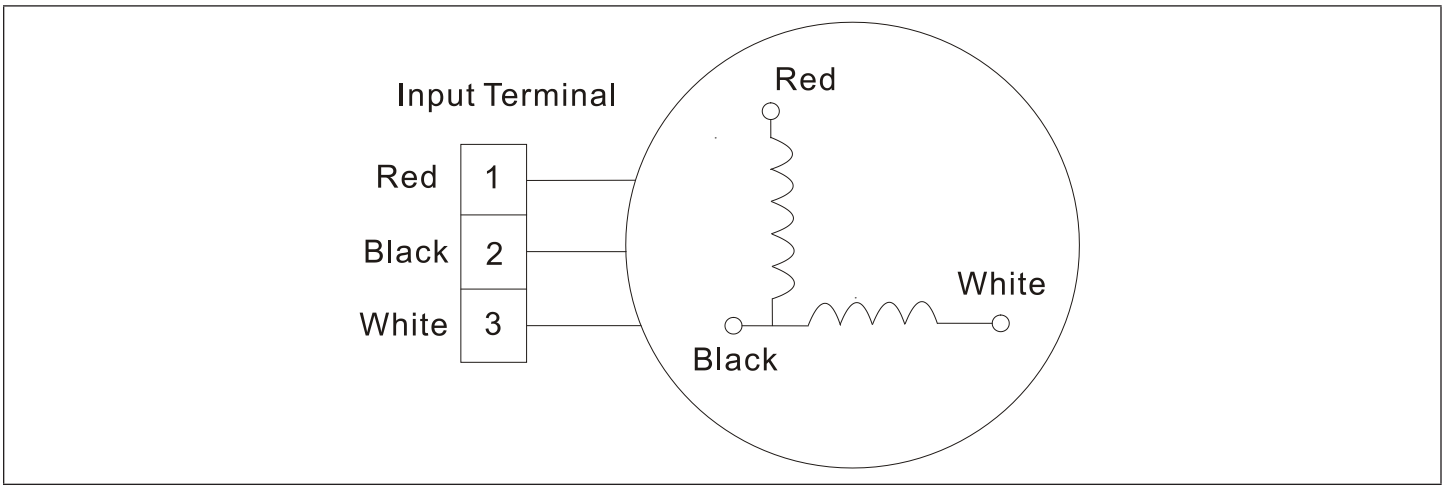

Figure 6. Terminals

Table 16. Resistance Value for AC or DC Fan Motors

Position	Resistance Value			
	RPG20B		RPG28H	
Black - Red	381Ω±8% (20°C) (Brand: Weiling)	342Ω±8% (20°C) (Brand: Dayang)	183.6Ω±8% (20°C) (Brand: Weiling)	180Ω±8% (20°C) (Brand: Wolong)
White - Black	267Ω±8% (20°C) (Brand: Weiling)	253Ω±8% (20°C) (Brand: Dayang)	206Ω±8% (20°C) (Brand: Weiling)	190Ω±8% (20°C) (Brand: Wolong)

Measure the resistance value of each winding by using the tester

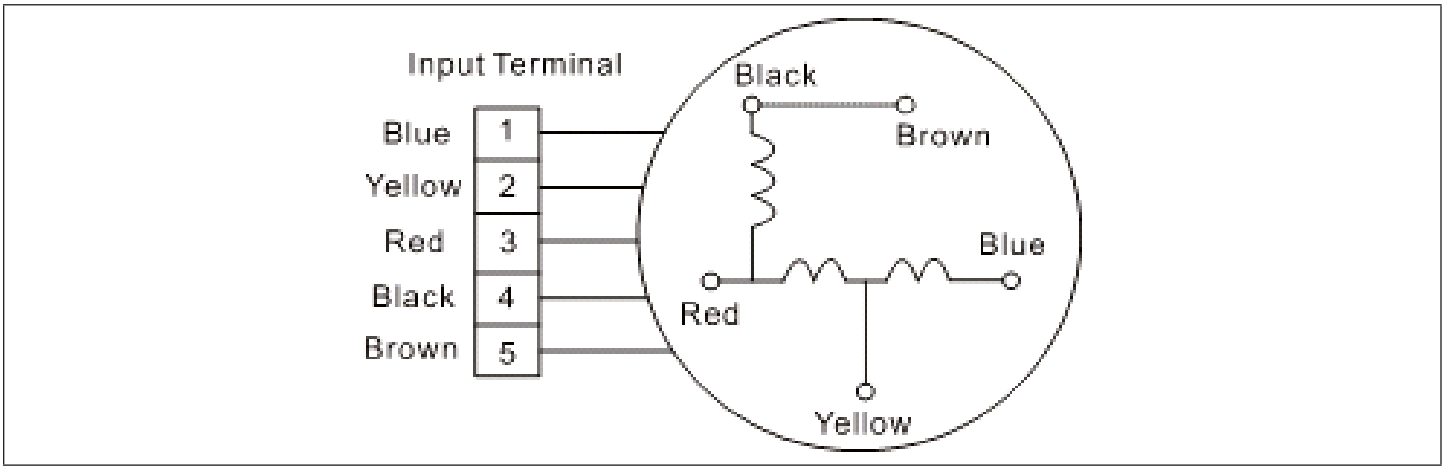

Figure 7. Terminals

10.3.2. DC Fan Motor (Control Chip is Inside Fan Motor)

Power on and when the unit is in standby, measure the voltage of pin 1 to pin 3, pin 4 to pin 3 in fan motor connector. If the value of the voltage is not in the range showing in below table, the printed circuit board must have problems and needs to be replaced.

For other models:

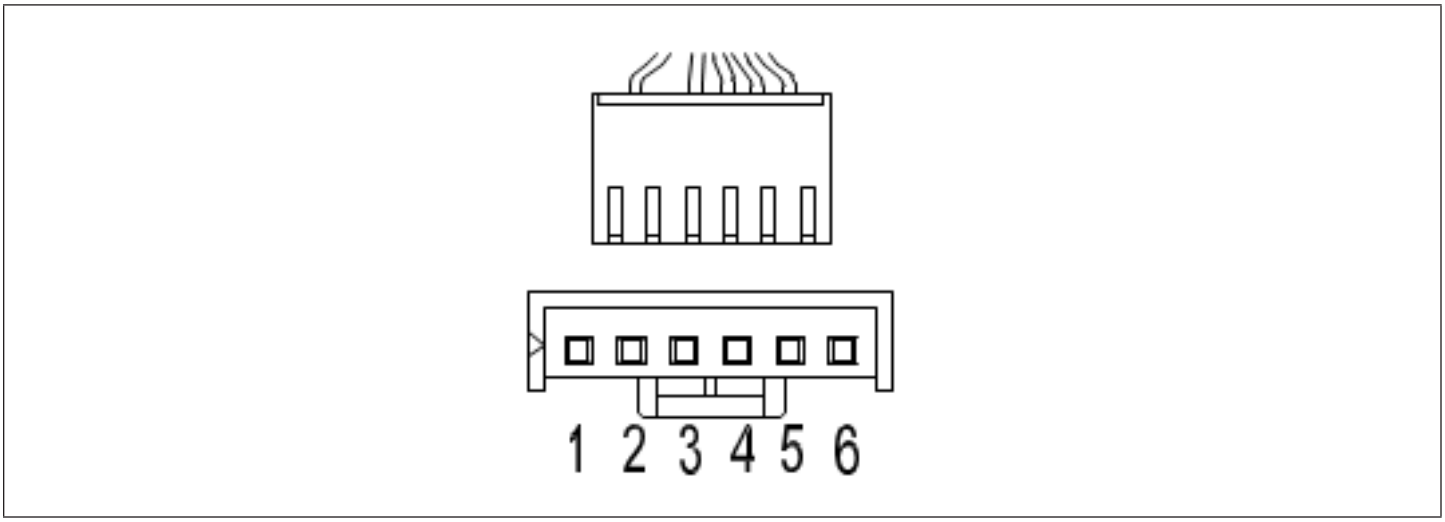

Figure 8. Pinouts

DC Motor Voltage Input and Output

Table 19. DC Motor Voltage Input and Output

NO.	Color	Signal	Voltage
1	Red	Vs/Vm	200V~380V
2	---	---	---
3	Black	GND	0V
4	White	Vcc	13.5-16.5V
5	Yellow	Vsp	0~6.5V
6	Blue	FG	13.5-16.5V

10.4. Four-Way Valve

NOTE: *For example Reversing Valve*

a. Power on, use a digital tester to measure the voltage, when the unit operates in cooling, it is 0V. When the unit operates in heating, it is about 230VAC. If the value of the voltage is not in the range, the outdoor unit main control board must have problems and will need to be replaced.

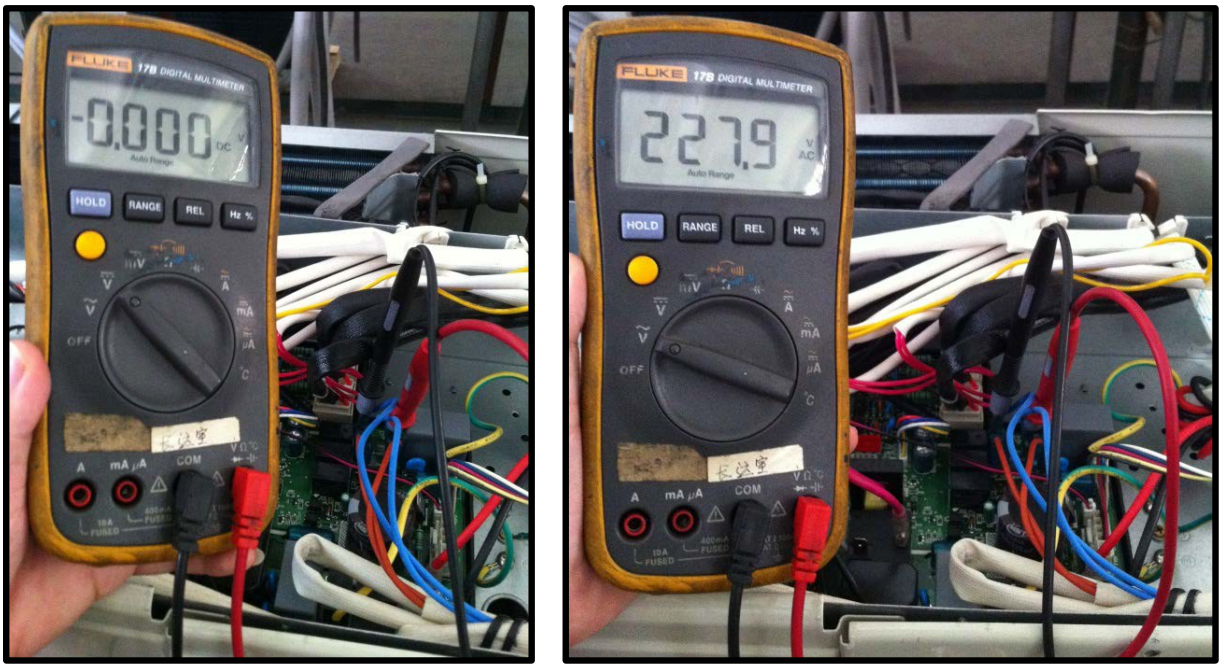

Figure 9. Measure Voltage

b. Turn off the power, use a digital tester to measure the resistance. The value should be 1.8~2.5 KΩ.

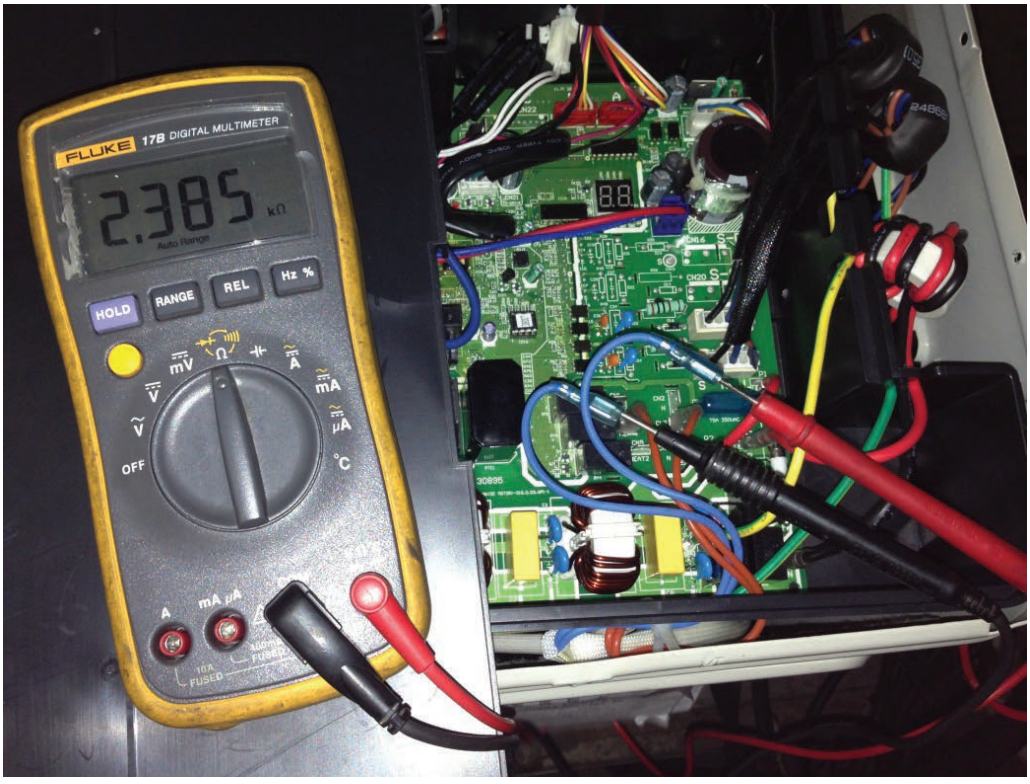

Figure 10. Measure Resistance

10.5. EXV Check

Disconnect the connectors.

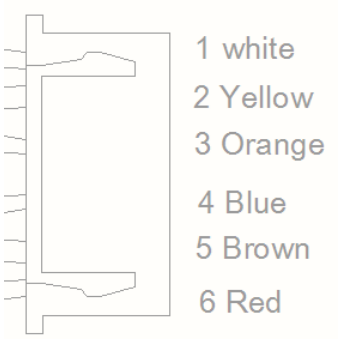

Figure 11. Connector Pin-Out

Table 20. Resistance

Color of lead wire	Normal Value
Red- Blue	About 50Ω
Red - Yellow	
Brown-Orange	
Brown-White	

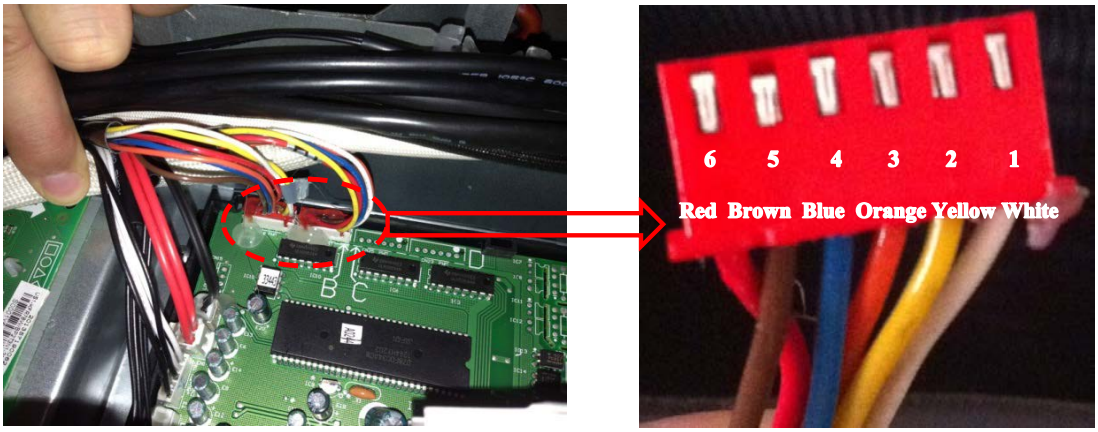

Figure 12. Connector Pin-Out

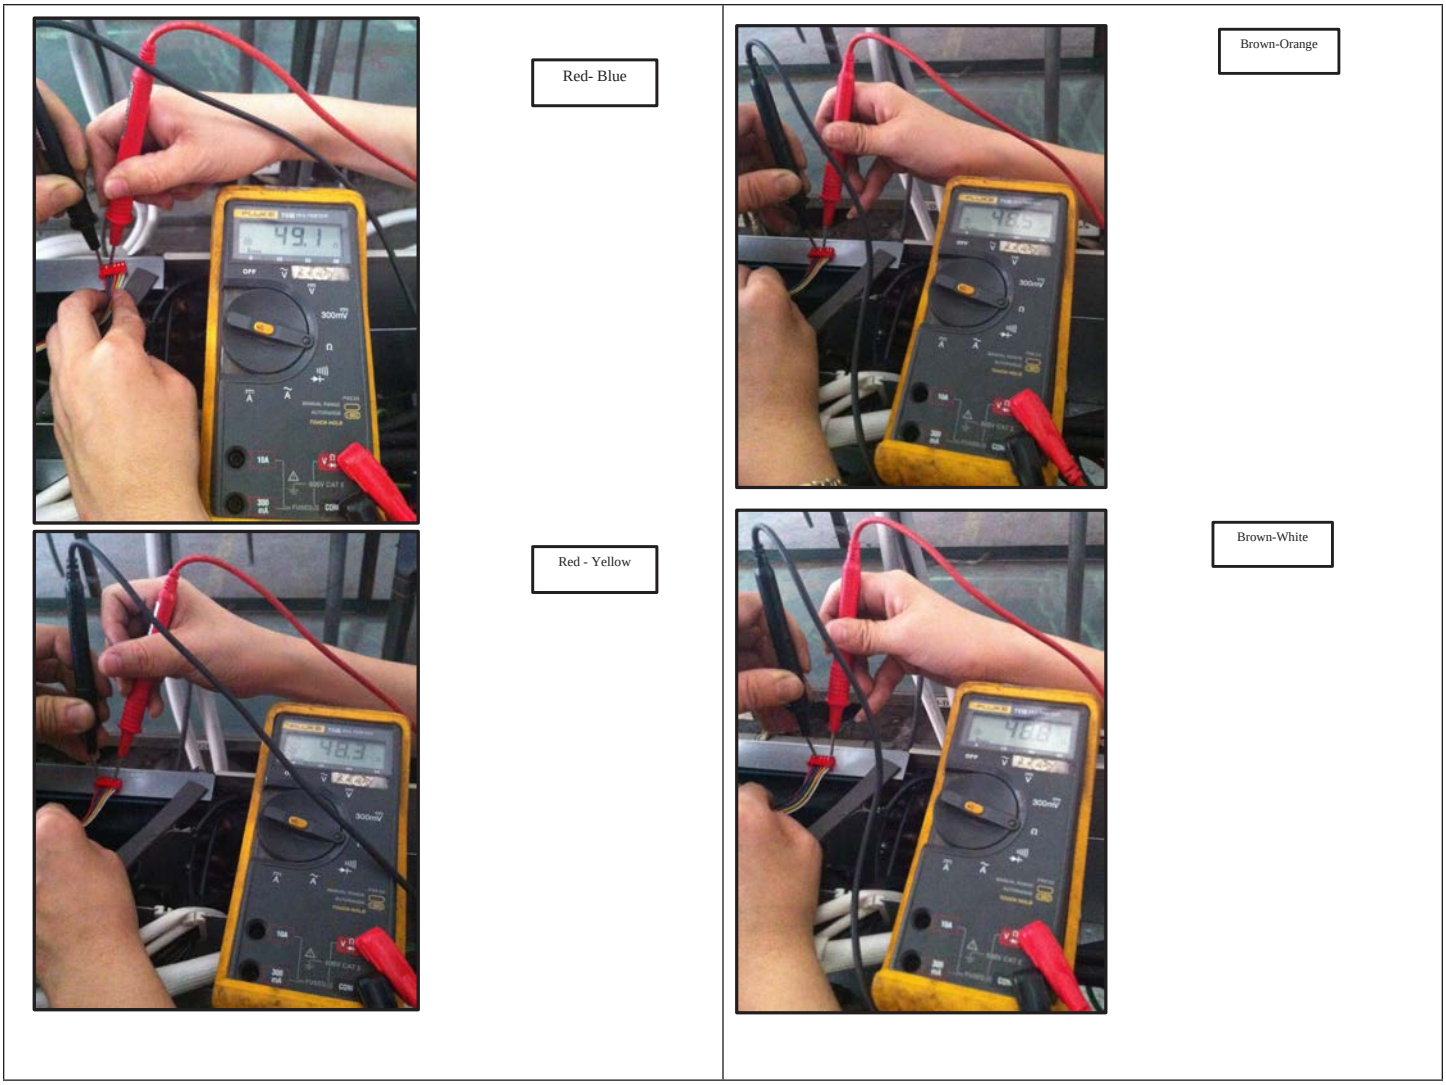

Figure 13. Connector Pin-Out

10.6. Electronic Expansion Valve (EXV) Control

a. EXV will be fully closed when turning on the power. Then EXV will be standby with 350P open and will open to target angle after compressor starts.

b. EXV will close with -160P when compressor stops. Then EXV will be standby with 350P open and will open to target angle after compressor starts.

c. The action priority of the EXVs is A-B-C-D.

d. Compressor and outdoor fan start operation only after EXV is initialized.

10.6.1. Cooling mode

The initial open angle of EXV is 250P, adjustment range is 100-350p. When the unit start to work for 3 minutes, the outdoor will receive indoor units(of capacity demand) T2B information and calculate the average of them. After comparing each indoor's T2B with the average, the outdoor gives the following modification commands: If the T2B>average, the relevant valve needs more 16p open; If the T2B= average, the relevant valve's open range remains; If the T2B<average, the relevant valve needs more 16p close.

This modification will be carried out every 2 minutes.

10.6.2. Heating mode

The initial open angle of EXV is 250P, adjustment range is 100-350p. When the unit start to work for 3 minutes, the outdoor will receive indoor units (of capacity demand) T2 information and calculate from subject received, size and categories.

After comparing each indoor's T2 with the average, the outdoor gives the following modification commands: If the T2>average+2, the relevant valve needs more 16p close;

If average+2≥the T2≥ average-2, the relevant valve's open range remains;

If the T2<average-2, the relevant valve needs more 16p open.

This modification will be carry out every 2 minutes.
