APPLICATIONS

SEER of up to 13.0.
HSPF of up to 8.15 (Region IV).

3 through 5 Ton sizes.

Three phase power supply.

Vertical air discharge allows concealment behind shrubs at grade level or out of sight on a roof.

Matching air handlers with supplemental electric heat or add-on furnace indoor coils (FM21 applications) provide a wide range of cooling and heating capacities and applications. See ARI Ratings table.

See Indoor Coils and Air Handlers tab sections for data. For FM21 applications, see bulletin indexed in Controls section.

Units shipped completely factory assembled, piped and wired. Each unit is test operated at the factory insuring proper operation.

Installer must set outdoor unit, connect refrigerant lines and make electrical connections to complete job.

APPROVALS

Certified in accordance with the USE certification program, which is based ARI Standard 210/240.

Sound rated in Lennox reverberant sound test room in accordance with test conditions included in ARI Standard 270.

Tested in the Lennox Research Laboratory environmental test room.

Rated according to U.S. Department of Energy (DOE) test procedures.

Units and components within bonded for grounding to meet safety standards for servicing required by UL, NEC and CEC.

Units are UL and ULC listed.

ISO 9001 Registered Manufacturing Quality System.

WARRANTY

Compressor - limited warranty for five years.

All other covered components - one year.

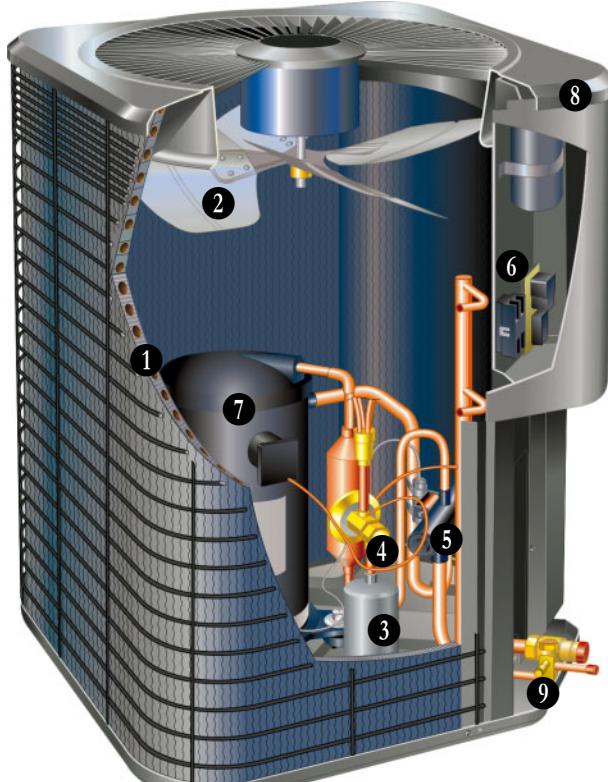

Refer to Lennox Equipment Limited Warranty certificate included with unit for specific details.

REFRIGERATION SYSTEM

Refrigerant

Non-chlorine, ozone friendly, R-410A.

Unit pre-charged with refrigerant. See Specification table.

① Copper Tube/Enhanced Fin Coil

Lennox designed and fabricated coil.

Ripple-edged aluminum fins.

Copper tube construction.

Lanced fins provide maximum exposure of fin surface to air stream resulting in excellent heat transfer.

Fin collars grip tubing for maximum contact area.

Flared shoulder tubing connections/silver soldering construction.

Coil is factory tested under high pressure to insure leakproof construction.

Entire coil is accessible for cleaning.

PVC coated steel wire coil guard furnished as standard.

High Pressure Switch

Shuts off unit if abnormal operating conditions cause the discharge pressure to rise above setting.

Protects compressor from excessive condensing pressure.

Automatic reset, will lock unit out after three trips.

Low Pressure Switch

Protects the compressor from low pressure conditions such as low refrigerant charge, or low/no air flow.

Automatic reset, will lock unit out after three trips.

② Outdoor Coil Fan

Direct drive fan moves large air volumes uniformly through entire outdoor coil for high refrigerant cooling and heating capacity.

Vertical air discharge minimizes operating sounds and eliminates damage to lawn and shrubs.

Fan motor has sleeve bearings and is inherently protected.

Motor totally enclosed for maximum protection from weather, dust and corrosion.

Rain shield on motor provides additional protection from moisture.

Louvered steel top fan guard furnished as standard.

Fan service access accomplished by removal of unit cabinet top.

FEATURES

REFRIGERATION SYSTEM

③ Hi-Capacity Drier

Factory installed.

Drier traps any moisture or dirt that could contaminate the refrigerant system.

④ Expansion Valve

Designed and sized specifically for heat pump systems. Sensing bulb located on suction line between reversing valve and compressor to sense suction temperature in any cycle.

Factory installed and piped.

⑤ Reversing Valve

4-way interchange reversing valve effects a rapid change in direction of refrigerant flow resulting in quick changeover from cooling to heating and vice versa.

Valve operates on pressure differential between outdoor unit and indoor unit of the system. Factory installed.

OPTIONS

Check and Expansion Valve Kits

Must be ordered extra and field installed on certain evaporator units. See ARI Ratings table.

Chatleff style fitting.

Freezestat

Installs on or near the discharge line of the evaporator or on the suction line.

Senses suction line temperature and cycles the compressor off when suction line temperature falls below its setpoint.

Opens at 29°F and closes at 58°F.

Refrigerant Line Kits

Refrigerant lines (suction & liquid) are shipped refrigeration clean.

Lines are cleaned, dried, pressurized and sealed at factory. Suction line fully insulated.

L15 lines are stubbed at both ends.

Kits are not available for -060 models and must be field fabricated.

CONTROLS

⑥ Defrost Control

Solid-state control furnished as standard.

Gives a demand defrost cycle whenever system heating performance falls below optimum levels. The sensing element on coil determines when defrost cycle is required and when to terminate cycle.

Anti-short cycle (5 minutes) incorporated into the board. Diagnostic LED's furnished as an aid in troubleshooting. Conveniently located in control box.

OPTIONS

Low Ambient Kit

Units operate satisfactorily down to 45°F outdoor air temperature without any additional controls.

Low Ambient Control Kit can be field installed, allowing unit operation down to 30°F.

Mild Weather Kit

Heat pump units operate satisfactorily in the heating mode at outdoor air temperatures up to 75°F.

Mild Ambient Kit can be field installed, allowing heating operation above 75°F.

Outdoor Thermostat Kit

Outdoor thermostat can be used to lock out some electric heating elements on indoor units where two stage control is applicable.

Outdoor thermostat maintains heating load on low power input as long as possible before allowing full power load to come on line.

Thermostat kit and mounting box must be ordered extra.

Monitor Kit

Field installed Monitor Kit includes ambient compensating thermistor and service light thermostat.

Thermistor reduces thermostat droop to improve the operating characteristics of the heat pump system.

Service light thermostat allows operation of the service light on the indoor thermostat.

Thermostat

Thermostat not furnished with unit. See Thermostat bulletins in the Controls Section and Lennox Price Book.

7 COMPRESSOR

Copeland Scroll™ Compressor

Compressor features high efficiency with uniform suction flow, constant discharge flow and high volumetric efficiency.

Scroll compressor technology eliminates need for start capacitor and start relay.

Compressor consists of two involute spiral scrolls matched together to generate a series of crescent shaped gas pockets between them.

During compression, one scroll remains stationary while the other scroll orbits around it.

Gas is drawn into the outer pocket, the pocket is sealed as the scroll rotates.

As the spiral movement continues, gas pockets are pushed to the center of the scrolls. Volume between the pockets is simultaneously reduced.

When pocket reaches the center, gas is now at high pressure and is forced out of a port located in the center of the fixed scrolls.

During compression, several pockets are compressed simultaneously resulting in a smooth continuous compression cycle.

Continuous flank contact, maintained by centrifugal force, minimizes gas leakage and maximizes efficiency.

Scroll compressor is tolerant to the effects of slugging and contaminants. If this occurs, scrolls separate, allowing liquid or contaminants to be worked toward the center and discharged.

Low gas pulses during compression reduces operational sound levels.

Compressor motor is internally protected from excessive current and temperature.

Muffler in discharge line reduces operating sound levels.

Compressor is installed in the unit on resilient rubber mounts for vibration free operation.

Crankcase heater factory installed on -048-060.

FEATURES

COMPRESSOR

OPTIONS

Compressor Low Ambient Cut-Out

Non-adjustable switch (low ambient cut-out) prevents compressor operation when outdoor temperature is below 35°F.

Crankcase Heater (-036 models)

Crankcase heater prevents migration of liquid refrigerant into compressor and ensures proper compressor lubrication. Crankcase heater factory installed on -048-060.

Compressor Sound Cover

A reinforced vinyl compressor cover containing a 1-1/2 in. thick batt of 2 to 2.7 lb. density, fiberglass insulation.

All open edges are sealed with a one-inch wide hook and loop fastening tape.

8 CABINET

Heavy gauge steel cabinet with five station metal wash process.

Powder paint finish provides rust and corrosion protection.

Painted base section.

Control box is conveniently located with all controls factory wired.

Corner patch plate allows access to compressor components.

Drainage holes are provided in base section for moisture removal.

Refrigerant Line Connections, Electrical Inlets, Service Valves

Sweat connection vapor and liquid lines are located on corner of unit cabinet.

- ⑨ Fully serviceable brass service valves prevent corrosion and provide access to refrigerant system. Vapor valve can be fully shut off, while liquid valve may be front seated to manage refrigerant charge while servicing system.

45° elbow furnished for ease of vapor line connection.

Refrigerant line connections and field wiring inlets are located in one central area of cabinet for easy access. See dimension drawing.

OPTIONS

Mounting Base

High density polyethylene mounting base is lightweight, sturdy, sound absorbing and will withstand the effects of sun, heat, cold, moisture, oil and refrigerant.

Provides permanent foundation for condensing units.

22-1/4 x 22-1/4 x 3 in. shipping weight 6 lbs. each.

Hail Guards

Constructed of louvered heavy gauge steel painted to match cabinet.

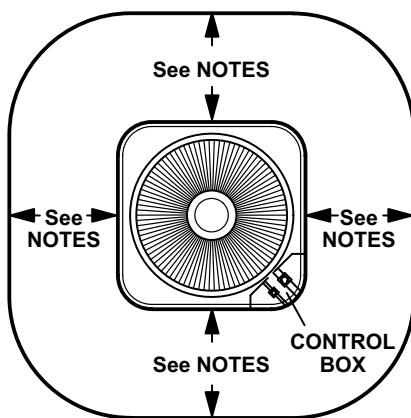

Surrounds unit on all four sides to prevent damage to the coil.

Unit Stand-Off Kit

Black high density polyethylene feet are available to raise unit off of mounting surface away from damaging moisture.

Four feet are furnished per order number.

INSTALLATION CLEARANCES - INCHES (MM)

NOTES:

Service clearance of 30 in. (762 mm) must be maintained on one of the sides adjacent to the control box.

Clearance to one of the other three sides must be 36 in. (914 mm).

Clearance to one of the remaining two sides may be 12 in. (305 mm) and the final side may be 6 in. (152 mm).

A clearance of 24 in. (610 mm) must be maintained between two units.

48 in. (1219 mm) clearance required on top of unit.

ARI RATINGS - INDOOR COIL / AIR HANDLER SUBSTITUTION

Substituting Coils in the ARI Tables

Most R-22 and R-410A indoor coils and air handlers are the same except for the Factory TXV expansion device. C33 coils can be used in place of the CX34 coils and CB30M can be used in place of the CBX32M air handlers.

The expansion device is based on the size of the outdoor unit. The Factory TXV RFC or TXV on the C33/CB30M must be replaced to correspond to the outdoor unit. The correct TXV's are:

3 ton air conditioners	37L51
4-5 ton air conditioners	39L72

Example:

A four-ton air conditioner is being installed. The ARI table shows that CBX32M-048 is a matching air handler. A CB30M-51 with a 91M02 TXV can be used in its place.
