FEA-

Application — HP24 series heat pump outdoor units consist of eight models ranging from 1 to 5 tons. Units have SEER's up to 11.55 with a cooling capacity range of 12,000 to 62,000 Btuh and COP of up to 3.54 with heating capacity range of 11,500 to 60,500 Btuh. Units are designed for use with remotely located indoor blower coil units or indoor add-on coils in Fuelmaster+™ applications. Outdoor units may be installed on a slab at grade level or on a rooftop. A variety of matching up-flo, down-flo or horizontal indoor blower coil units, with optional supplemental electric heat provide selective sizing and installation versatility. For Fuelmaster+ controls information, see bulletin indexed in this tab section. For complete data on indoor blower coil units and Fuelmaster+ coils, see tab section, Coils — Blower Coil Units. HP24 units are test operated at the factory to insure proper operation and are shipped ready for installation. Installer has only to locate unit and make refrigerant line and electrical connections to complete the installation.

Refrigerant Control Choice — A choice of refrigerant flow controls is available. Use an RFC III™ refrigerant metering orifice for an economical installation restricted to specific indoor blower coil units (CB19/CBH19) or select an optional check and expansion valve kit for a larger selection of indoor units.

NOTE — Specifications, Ratings and Dimensions subject to change without notice.

HP24 SERIES HEAT PUMP OUTDOOR UNITS RFC III™ or EXPANSION VALVE SYSTEMS

10.05 to 11.55 SEER

*12,000 to 62,000 Btuh Cooling Capacity

*11,500 to 60,500 Btuh Heating Capacity

*ARI Standard 210/241 Certified Ratings

L L

+ +

Refrigerant Flow Control III — HP24 units are applicable to Lennox RFC III systems when matched with CB19 and CBH19 blower coil units only. RFCIII (Refrigerant Flow Control) is a very accurate means of metering refrigerant in a system. Metering control is accomplished by the exact sizing of the refrigerant metering orifice located in the distributor on the CB19/CBH19 coils. The distributor is equipped with a flare fitting connector for easy connection of the liquid line, see illustration. Design of the bullet shaped orifice allows for reverse flow during the heating cycle. As the refrigerant flows in the reverse direction the orifice moves back to a free flow position, eliminating the need for a check valve and related piping. The entire principle of the RFCIII system involves the matching of the indoor coil and the proper sizing of the metering orifice. The RFCIII system equalizes pressures instantly after the compressor stops, eliminating the need for any extra controls and allowing the compressor to start unloaded.

Approvals — Units have been tested with matching indoor units in the Lennox Research Laboratory environmental test room and rated according to U.S. Department of Energy (DOE) test procedures and in accordance with ARI Standard 210/240-89. Units have been sound rated in the Lennox reverberant sound test room in accordance with ARI Standard 270-84. Units and components within are bonded for grounding to meet safety standards for servicing required by U.L. and N.E.C. Units are also U.L. listed.

Equipment Warranty — Compressor has a limited warranty for five years. All other components have a limited warranty for one year. Refer to the Lennox Equipment Limited Warranty certificate included with the unit for details.

Weather Resistant Cabinet and Base Section — Heavy gauge galvanized steel cabinet and base section are subjected to a five station metal wash process prior to a finish coat application of baked-on outdoor enamel. Attractive enamel finish provides the cabinet and base section with long lasting protection from rust and corrosion. Drainage holes are provided in the base section for moisture removal. High density polyethylene base supports raise the unit off of the mounting surface away from damaging moisture.

FEATURES (Continued)

Accessible Control Box — Conveniently located for easy access. All controls are pre-wired at the factory.

Copper Tube/Enhanced Fin Coil — Lennox designed and fabricated coil is constructed of precisely spaced ripple-edged aluminum fins machine fitted to seamless copper tubes. Four-sided wrap-around coil configuration provides extra large surface area with low air resistance. Lanced fins provide maximum exposure of the fin surface to air stream resulting in excellent heat transfer. Fins are equipped with collars that grip the tubing for maximum contact area. Precise circuiting provides uniform refrigerant distribution for high efficiency. Flared shoulder tubing connections and silver soldering result in tight, leakproof joints. Long-life copper tubing is corrosion-resistant and easy to field service. Coil is factory tested under high pressure to insure leakproof construction. Entire coil is accessible for cleaning. Corrosion-resistant PVC (polyvinyl chloride) coated steel wire condenser coil guard is furnished as standard.

Dependable and Quiet Compressor — Compressor is hermetically sealed and provides trouble-free operation and long service life. Built-in protection devices assure protection from excessive current and temperatures. Refrigerant cooled and overload protected. HP24-141 is equipped with a rotary compressor. HP24-211 thru HP24-650 models are furnished with a crankcase heater as standard equipment to ensure proper compressor lubrication at all times. Heater is temperature actuated to operate only when required. The compressor components are spring mounted within the sealed housing. In addition, the compressor is installed in the unit on resilient rubber mounts for quiet and vibration free operation. Muffler, factory installed in discharge line, reduces operating sound levels.

Suction Line Accumulator — Factory installed and piped accumulator is furnished on HP24-141, -460, -510 and -650 models only. Accumulator prevents large amounts of liquid refrigerant from entering the compressor eliminating damage on start-ups and refrigerant cycle changes.

Reversing Valve — Factory installed 4-way reversing valve provides a rapid change in refrigerant flow direction resulting in quick change-over from cooling to heating and vice-versa. Valve operates on pressure differential between outdoor unit and indoor unit.

OPTIONAL ACCESSORIES (Must Be Ordered Extra)

Check and Expansion Valve Kits (Optional) — For maximum seasonal efficiency, use a check and expansion valve matched to indoor unit. Must be ordered extra and field installed on indoor coil unit. See ARI Ratings table for kit selection.

NOTE — When HP24 units are used with CB19/CBH19 indoor blower coil units with a check and expansion valve, CB19/CBH19 units must be field altered by removing the RFCIII refrigerant metering orifice. The orifice is easily removed at the liquid line connection on the indoor unit. See illustration on previous page.

Mounting Base (Optional) — Mounting base provides a permanent foundation for outdoor units. High density polyethylene structural material is lightweight, sturdy, sound absorbing and will withstand the effects of sun, heat, cold, moisture, oil and refrigerant. Will not mildew or decompose. Can be shipped singly or in packages of six to a carton. Use MB1-24 (**78H50**) 32" x 34" x 3", shipping weight 15 lbs. each.

Expansion Valve — Designed and sized specifically for use in heat pump system. Sensing bulb is located on the suction line between the reversing valve and compressor to sense suction temperature in any cycle. Factory installed and piped.

Defrost Control — Solid-state time/temperature defrost control is furnished as standard equipment. Control initiates a defrost cycle every 30, 60 or 90 minutes of compressor "on" time at outdoor temperatures below 35° F (factory setting 60 minutes). Maximum defrost cycle is 14 minutes. Defrost thermostat mounted on the liquid line determines when a defrost cycle is required and when to terminate a cycle.

Start Controls — Factory installed start capacitor and potential relay provides assistance for compressor start under loaded conditions, low voltage or low ambient conditions.

Powerful Condenser Fan — Efficient direct drive fan moves large air volumes uniformly through the entire outdoor coil resulting in high refrigerant capacity. Vertical discharge of air minimizes operating sounds and eliminates hot air damage to lawn and shrubs. Fan motor is inherently protected and totally enclosed for maximum protection from weather, dust and corrosion. Rain shield on motor provides additional protection from moisture. Fan service access is provided by removal of fan guard. Corrosion-resistant PVC (polyvinyl chloride) coated steel wire fan guard is furnished as standard.

Refrigerant Line Connections, Electrical Inlets and Service Valves — Liquid and vapor line connections are located outside the unit cabinet and are made with sweat connections. Fully serviceable brass service valves prevent corrosion and provide easy access to refrigerant system. Liquid and vapor valves can be fully shut off, and the liquid valve can be backseated to manage refrigerant charge while servicing the system. Field installed thermometer well is furnished for installation in the liquid line. Valves and gauge ports are accessible outside the unit cabinet. See dimension drawing. In addition, a high capacity drier with internal check valve and strainer are furnished and factory installed in the liquid line.

Refrigerant Line Kits (Optional) — Lines are available in several lengths. See Refrigerant Line Kit table. Lines (vapor and liquid) are shipped refrigeration clean. Lines are cleaned, dried, pressurized and sealed at the factory. Vapor line is fully insulated. Lines are furnished with a flare fitting (indoor unit connection) at one end and stubbed (no fitting) at the opposite end for connection to outdoor unit. Kits are not available for the HP24-141 and HP24-650 models and lines must be furnished by the installer. Refrigerant line length should not exceed 50 ft. in any installation. If longer lines are needed, contact your Lennox Field Service Consultant.

Thermostat (Optional) — Thermostat is not furnished with the unit and must be ordered extra. See Thermostats bulletin in Accessories Section.

Outdoor Thermostat Kit (Optional) — An outdoor thermostat can be used to lock out some of the electric heating elements on indoor units where two stage control is applicable. Outdoor thermostat maintains the heating load on the low power input as long as possible before allowing the full power load to come on the line. Thermostat kit LB-29740BA (**31461**) and mounting box M-1595 (**56A87**) must be ordered extra.

**HP24-141, HP24-211 & HP24-261 units will accept 3/8" liquid lines. Adaptors furnished with outdoor units will allow use with 1/4" liquid line (HP24-141) and 5/16" liquid line (HP24-211 & 261).

INSTALLATION CLEARANCES (inches)

NOTE—48 inch clearance required on top of unit.

*NOTE—One side must be 36 inches for service.

Two of the remaining three sides may be 12 inches.

ELECTRICAL DATA

Model No.		HP24-141	HP24-211	HP24-261	HP24-311	HP24-411	HP24-413	
Line voltage data		208/230v 60hz-1ph	208/230v 60hz-1ph	208/230v 60hz-1ph	208/230v 60hz-1ph	208/230v 60hz-1ph	208/230v 60hz-3ph	460v 60hz-3ph
Compressor	Rated load amps	5.0	8.1	10.9	12.2	16.3	11.6	5.1
	Power factor	.97	.99	.95	.97	.99	.88	.88
	Locked rotor amps	26.3	49.0	61.0	71.0	86.7	65.1	32.8
Outdoor Coil Fan Motor	Full load amps	1.1	1.1	1.1	1.1	1.1	1.1	0.6
	Locked rotor amps	1.7	1.7	1.7	1.7	1.7	1.7	0.9
Rec. max. fuse or circuit breaker size (amps)		15	15	25	25	35	25	15
*Minimum circuit ampacity		7.4	11.3	14.8	16.4	21.5	15.6	7.0

*Refer to National Electrical Code manual to determine wire, fuse and disconnect size requirements.

NOTE — Extremes of operating range are plus 10% and minus 5% of line voltage.

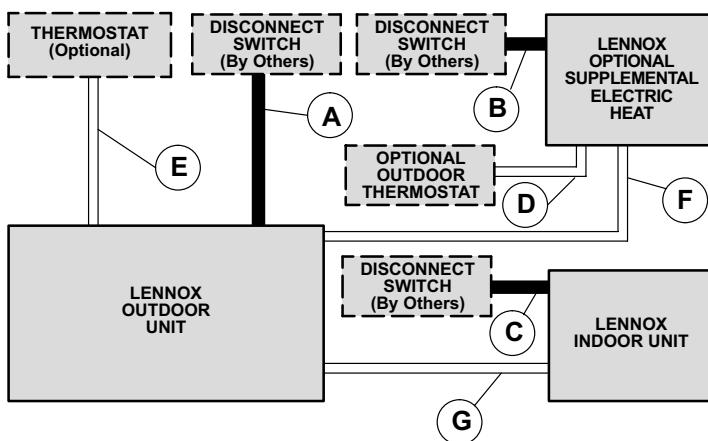

ELECTRICAL DATA

	Locked rotor amps	3.1	3.1	2.2	3.1	3.1	2.2	3.1	2.2
Rec. max. fuse or circuit breaker size (amps)		40	30	15	50	35	20	60	40
*Minimum circuit ampacity		25.0	17.6	8.4	32.2	21.9	11.6	40.2	23.5

*Refer to National Electrical Code manual to determine wire, fuse and disconnect size requirements.

NOTE — Extremes of operating range are plus 10% and minus 5% of line voltage.

FIELD WIRING

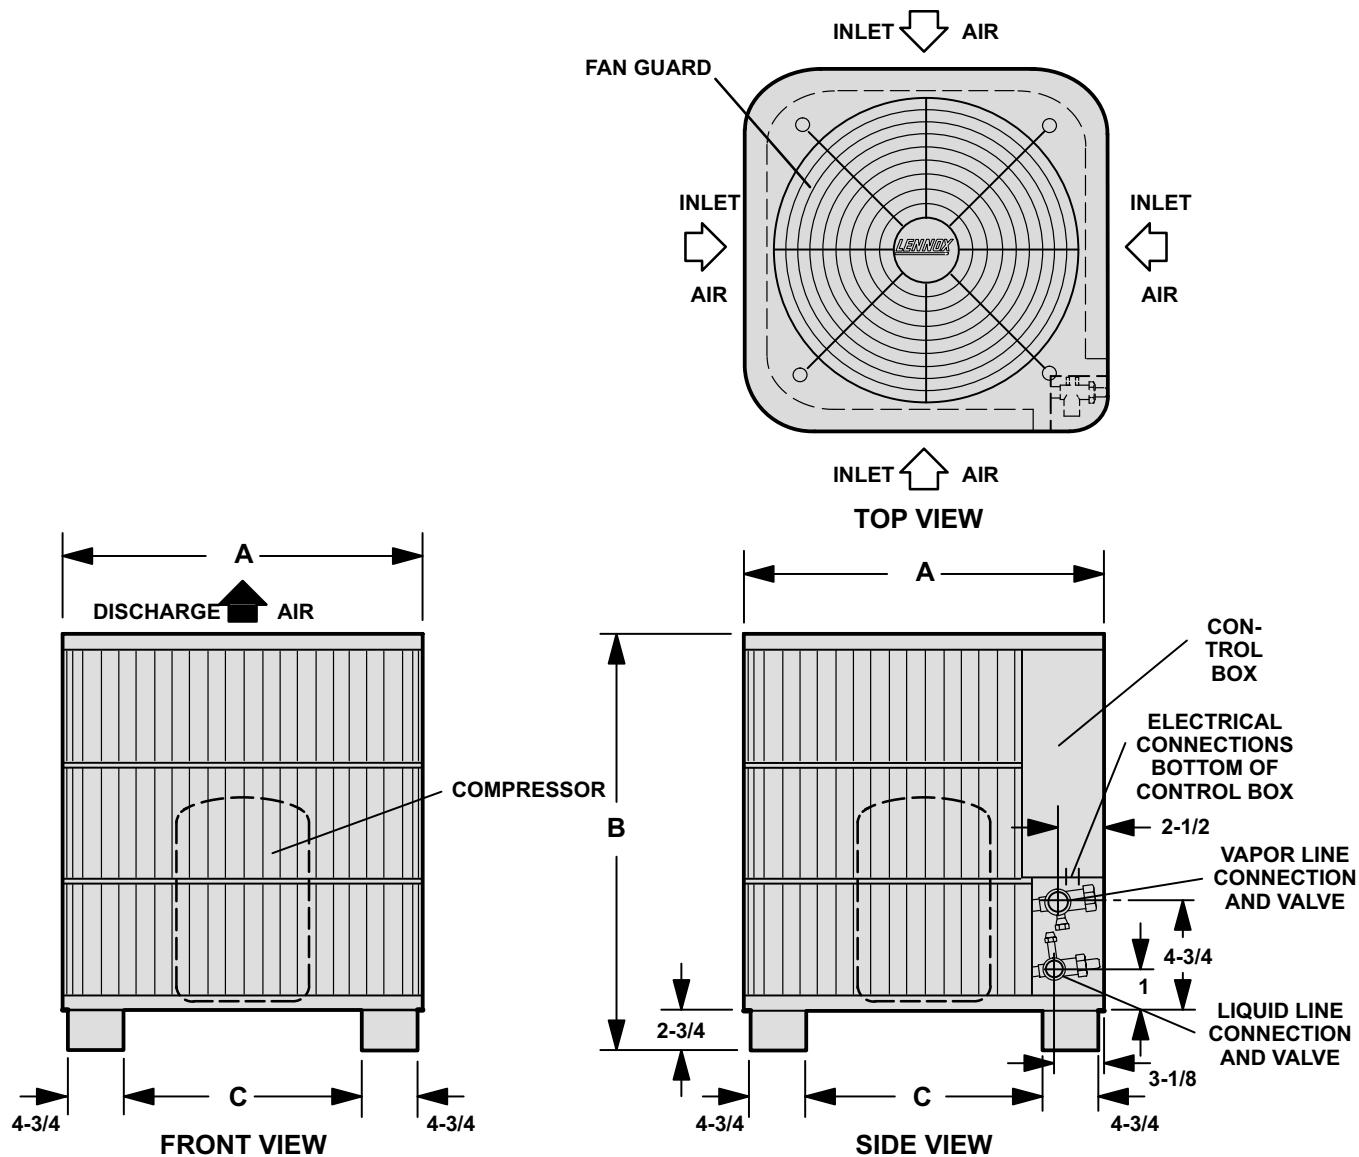

- A — Two or Three Wire Power (see Electrical Data)
- B — Two or Three Wire Power (size to heater capacity)
- C — Two Wire Power (size to indoor coil blower motor)
- D — Two Wire Low Voltage — 18 ga. minimum
- E — Eight Wire Low Voltage — 18 ga. minimum — with Electric Heat
 - Ten Wire Low Voltage with Optional Outdoor Thermostat
- F — Four Wire Low Voltage — 18 ga. minimum
- G — Three Wire Low Voltage — 18 ga. minimum

— Field Wiring Not Furnished —

All wiring must conform to NEC and local electrical codes.

	65		45		25		5		-15	
	Total Htg. Cap. (Btuh)	Comp. Mtr. Input (W)	Total Htg. Cap. (Btuh)	Comp. Mtr. Input (W)	Total Htg. Cap. (Btuh)	Comp. Mtr. Input (W)	Total Htg. Cap. (Btuh)	Comp. Mtr. Input (W)	Total Htg. Cap. (Btuh)	Comp. Mtr. Input (W)
2150	75,900	4955	58,900	4205	41,600	3455	28,100	2725	14,300	2050
2375	76,500	4905	59,500	4150	42,200	3405	28,700	2675	15,000	2000

*Heating capacities include the effect of defrost cycles in the temperature range where they occur.

HP24-651-653 HEATING PERFORMANCE at 2150 cfm Indoor Coil Air Volume (CH19-65)

*Outdoor Temperature (°F)	Compressor Motor Watts Input	Total Output (Btuh)
65	4955	75,900
60	4765	71,700
55	4575	67,600
50	4385	63,500
47	4275	61,000
45	4205	58,900
40	4030	53,500
35	3855	48,200
30	3655	44,900
25	3455	41,600
20	3255	38,300
17	3135	36,300
15	3065	34,900
10	2895	31,500
5	2725	28,100
0	2560	24,600
-5	2390	21,200
-10	2220	17,800
-15	2050	14,300
-20	1880	10,900

*Outdoor temperature at 70% relative humidity. Indoor temperature at 70°F.
