

## 13ACX HFC-410A CHARGING INFORMATION – FOR COMPLETE CHARGING PROCEDURES, REFER TO THE APPLICABLE INSTALLATION AND SERVICE MANUAL

**AIRFLOW CHECK** - Both airflow and refrigerant charge must be monitored for a proper system set-up. It may be necessary to alternately check and adjust the airflow and the refrigerant charge.

*NOTE - Be sure that filters and indoor and outdoor coils are clean before testing.*

To determine temperature drop across indoor coil (Delta-T), measure the entering air dry bulb (DB) and wet bulb (WB) temperatures at the indoor coil. Find Delta-T in table 1. Measure coil's leaving air DB and subtract that value from entering air DB. The measured difference should be within  $\pm 3^\circ\text{F}$  ( $\pm 1.8^\circ\text{C}$ ) of table value; if too low, decrease the indoor fan speed (refer to indoor unit for information). If the Delta-T is too high, increase the indoor fan speed. Repeat charging procedure and Delta-T (air flow adjustment) procedure until both are correct.

**Example:** assume entering air DB - 72, WB - 64, leaving DB - 53. Therefore, Delta-T should be 15 (per table); delta across coil is 72 - 53 or 19 (which is 4°F higher than table value); action necessary: increase fan speed.

**Table 1. Evaporator Coil Delta-T**

|             |    |  |    |    |    |    |    |    |    |    |    |    |    |    |    |
|-------------|----|--|----|----|----|----|----|----|----|----|----|----|----|----|----|

- 1 Typical pressures; indoor evaporator match up, indoor air quantity, and evaporator load will cause the pressures to vary.
- 2 Temperature of air entering outside coil.
- 3 Approach = Liquid Line Temp. minus Outdoor Ambient Temperature
- 4 Subcooling = Saturation Temp. minus Liquid Line Temp Temperature
