## Common LP/Propane Kits For 80% and 90% Efficiency Furnaces

Lennox is now offering LP kits that contain parts compatible for both our 80% and 90% efficiency furnaces. We will have one LP kit for all single-stage units, one kit for all two-stage units and one kit for all variable capacity units. The new kits will include a low supply line pressure switch to help prevent sooting in furnace heat exchangers when the LP tank runs low. These new kits will be phased in over the upcoming heating season.

As part of this change, the kits will be backwards compatible. See the table 1 below. The orifice size will change on the 80% furnaces from 0.039" to 0.034" (0.034" falls between #65 and #66 drill size and cannot be drilled in the field). The firing rate will remain the same as specified and no de-rate will occur. Please use this S & A note as authorization to substitute the new kits in place of the old kits.

If you have any questions please contact Lennox Technical Support at(800) 453-6669.
