REPLACEMENT HEAT EXCHANGER

INSTALLATION INSTRUCTIONS FOR REPLACEMENT HEAT EXCHANGER KITS FOR USE WITH 80% EFFICIENCY UPFLOW/HORIZONTAL ULTRA-LOW NOX FURNACES

⚠ WARNING

Improper installation, adjustment, alteration, service or maintenance can cause property damage, personal injury or loss of life. Installation and service must be performed by a licensed professional HVAC installer (or equivalent), service agency or the gas supplier.

⚠ WARNING

Disconnect power before servicing unit.

Shipping and Packing List

Package 1 of 1 contains the following:

- 1 - Heat exchanger assembly

Application

See tables 1 and 2 for unit capacities, cabinet width and corresponding replacement kits.

TABLE 1

Single-Stage Furnaces

Unit Capacities	Cabinet Width	Replacement Kit No.	Replacement Catalog No.
040	A - 14-1/2"	615544-05	15U80
060	A - 14-1/2"	615544-06	15U78
080	B - 17-1/2"	615544-07	15U79
100	C - 21"	615544-08	15U81

TABLE 2

Two-Stage Furnaces

Unit Capacities	Cabinet Width	Replacement Kit No.	Replacement Catalog No.
060	A - 14-1/2"	615544-01	15M01
080	B - 17-1/2"	615544-02	15M08
080	C - 21"	615544-03	15M09
100	C - 21"	615544-04	15M11

Installation

Refer to figure 2 as you disassemble the the unit. Place papers or protective covering in front of the furnace before removing the heat exchanger assembly.

- 1 - Turn off both electrical and gas power supplies to furnace.
- 2 - Remove flue pipe and top cap if necessary from the unit.
- 3 - Label the wires from gas valve, rollout switch, primary limit switch and make-up box then disconnect them.
- 4 - Remove the screws that secure the combustion air inducer to the collector box.
- 5 - Disconnect gas supply piping. Remove the air fuel / intake assembly.
- 6 - Remove screws from both sides, top and bottom of vestibule panel.
- 7 - Remove heat exchanger. It may be necessary to spread cabinet side to allow more room. If so, remove five screws from the left side or right side of cabinet. See figure 1.

Figure 1

HEAT EXCHANGER REMOVAL (Two-Stage Shown)

Figure 2

- 8 - Vinspect the combustion air inducer. If the assembly is clean move to the next step. If necessary, use a wire brush to clean. Use compressed air to clean off debris and any rust.
- 9 - Reinstall heat exchanger in vestibule. (Replace the five screws in the cabinet from step 7 (if removed).
- 10 - Re-install the air / fuel assembly.
- 11 - Reconnect all wires.
- 12 - Reconnect top cap and vent pipe to combustion air inducer outlet.
- 13 - Reconnect gas supply piping.
- 14 - Turn on power and gas supply to unit.
- 15 - Set thermostat and check form proper operation.

CAUTION

Some soaps used for leak detection are corrosive to certain metals. Carefully rinse piping thoroughly after leak test has been completed. Do not use matches, candles, flame or other sources of ignition to check for gas leaks.

- 16 - Check all piping connections, factory and field, for gas leaks. Use leak detector solution or other preferred means.
- 17 - If a leak is detected, shut gas and electricity off and repair leak. Repeat until no leaks are detected.
- 18 - Replace access panel.
