REPLACEMENT HEAT EXCHANGER

⚠️ WARNING
Improper installation, adjustment, alteration, service or maintenance can cause property damage, personal injury or loss of life. Installation and service must be performed by a licensed professional HVAC installer (or equivalent), service agency or the gas supplier.

⚠️ WARNING
Disconnect power before servicing unit.

Shipping & Packing List

Package 1 of 1 contains the following:
1 - Heat exchanger assembly

Application

See table 1 for unit capacities, cabinet width and corresponding replacement kits.

Installation

Refer to figure 1 as you disassemble the unit. Place papers or protective covering in front of the furnace before removing the heat exchanger assembly.

1 - Turn off both electrical and gas power supplies to furnace.
2 - Remove exhaust pipe and top cap if necessary from the unit. Remove the intake pipe.
3 - Label the wires from gas valve, rollout switch, primary limit switch and make-up box then disconnect them.
4 - Remove the screws that secure the combustion air inducer to the collector box.
5 - Disconnect gas supply piping. Remove the air fuel / intake assembly.
6 - Remove screws from both sides, top and bottom of vestibule panel.
7 - Remove heat exchanger.
8 - Visually inspect the combustion air inducer. If the assembly is clean move to the next step. If necessary, use a wire brush to clean. Use compressed air to clean off debris and any rust.
9 - Reinstall heat exchanger in vestibule.
10 - Re-install the air / fuel assembly.
11 - Reconnect all wires.
12 - Reconnect top cap and exhaust pipe to combustion air inducer outlet. Reconnect the air intake pipe.
13 - Reconnect gas supply piping.
14 - Turn on power and gas supply to unit.
15 - Set thermostat and check form proper operation.
16 - Check all piping connections, factory and field, for gas leaks. Use leak detector solution or other preferred means.
17 - If a leak is detected, shut gas and electricity off and repair leak. Repeat until no leaks are detected.
18 - Replace access panel.

⚠️ CAUTION

Some soaps used for leak detection are corrosive to certain metals. Carefully rinse piping thoroughly after leak test has been completed. Do not use matches, candles, flame or other sources of ignition to check for gas leaks.
