## PERFORMANCE/QUALITY

- Components bonded for grounding to meet safety standards for servicing required by Underwriters Laboratories (UL) and the International Electrotechnical Commission (IEC).
- Cooling performance is rated at test conditions included in Air- Conditioning, Heating and Refrigeration Institute (AHRI) Standard 340/360-2007 while operating at rated voltage and air volumes.
- International Organization for Standardization (ISO) 9001 Registered Manufacturing Quality System.

## FEATURES AND BENEFITS

### DUAL-FUEL OPERATION

- In heating mode the heat pump operates the heat pump for 1st stage heating
- If 1st stage is not satisfied, the 2nd stage will activate gas heating (secondary heat source)
- Mechanical heat pump operation is automatically terminated on gas heat start-up
- Unit control automatically changes blower speeds between heat pump heating and gas heat operation
- Blower operates in high speed during 1st stage (heat pump) operation and is terminated during changeover to gas heat operation
- Blower starts up when heat exchanger is warm, and runs in high speed during 2nd stage (gas heat) operation
- If continuous blower operation is available on thermostat, change in blower speed automatically occurs during heat pump heat to gas heat changeover

### COOLING/HEATING SYSTEM

- Designed to maximize sensible and latent cooling performance at design conditions
- System can operate in the cooling mode from 1°C to 52°C without any additional controls

#### R-410A Refrigerant

Cooling Ratings - 35°C (95°F) outdoor air temperature and 27°C (80°F) db/19°C (67°F) wb entering indoor coil air.

High Temperature Heating Ratings - 8°C (47°F) db/6°C (43°F) wb outdoor air temperature and 21°C (70°F) entering indoor coil air.

Low Temperature Heating Ratings - -8°C (17°F) db/-9°C (15°F) wb outdoor air temperature and 21°C (70°F) entering indoor coil air.

<sup>2</sup> Integrated Energy Efficiency Ratio tested at conditions included in AHRI Standard 340/360 while operating at rated voltage and air volumes.

<sup>3</sup> Using total air volume and system static pressure requirements determine from blower performance tables rev/min and motor output required. Maximum usable output of motors furnished are shown. If motors of comparable output are used, be sure to keep within the service factor limitations outlined on the motor nameplate.

## HIGH ALTITUDE DERATE

Units may be installed at altitudes up to 610 m (2000 feet) above sea level without any modification.

At altitudes above 610 m (2000 feet), units must be derated to match gas manifold pressures shown in table below.

At altitudes above 1372 m (4500 feet) unit must be derated 2% for each 305 m (1000 feet) above sea level.

NOTE - This is the only permissible derate for these units.
