Step 1: Install damper with crimped end downstream.

Step 2: Slide damper over end of crimped duct and secure to duct with 1/2 inch long sheet metal screws (not included).

Step 3: Reconnect damper motor wires.

Step 4: The fresh air intake ductwork and damper must be fully insulated with vapor barrier and all seams must be sealed to prevent condensation from forming.

NOTE: Support all duct work in accordance with local code or SMACNA standards.
