

**CHA9 & CHA10-650 SERIES — HORIZONTAL  
 SINGLE PACKAGE AIR CONDITIONERS**  
 \*24,600 to 58,000 Btuh (7.2 to 17.0 kW) Total Cooling Capacity  
 11,900 to 112,700 Btuh (3.5 to 33.0 kW) Optional Electric Heat

\*ARI Standard 210 Certified Ratings

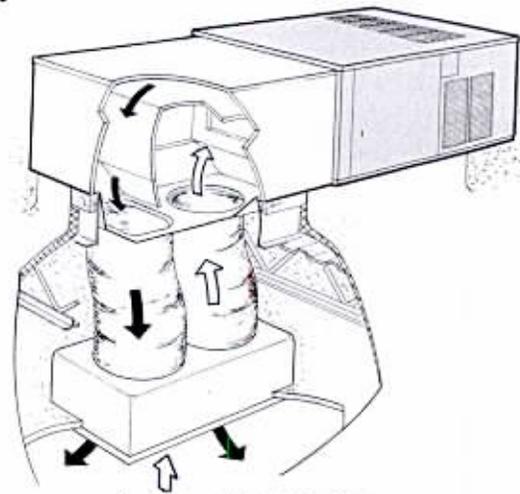

**CHA9 UNIT**  
 (With optional RD10 POWER SAVER\*  
 and mounting frame)

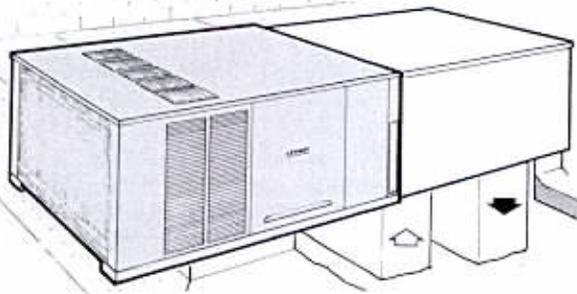

**Typical Applications**

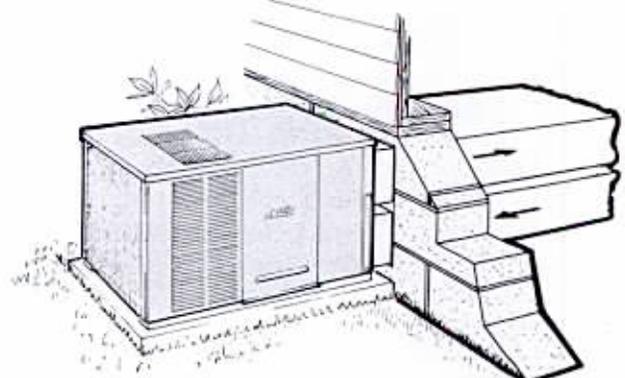

Rooftop Installation With Optional  
 Duct Enclosure, SRP9-65 Plenum and  
 FD-41 or 65 Combination Supply and Return Diffuser

Rooftop Installation With Optional  
 Duct Enclosure, SRT10-65 Transition, and  
 FD9-65 Combination Supply and Return Diffuser

Rooftop double duct installation  
 with optional RT10 duct enclosure

Unit on slab at grade level.

NOTE — Specifications, Ratings and Dimensions subject to change without notice.

## FEATURES

**Applications** — Lennox single package CHA9 series and CHA10-650 air conditioning units are designed for residential or small commercial installations. Several models are available with a wide and varied cooling capacity range. Units can be installed with ducts extended through a wall in a crawl space, basement, utility room or attic. Installation on a slab at grade level or on a rooftop will save valuable interior floor space.

**Rugged Cabinet** — Constructed of heavy gauge galvanized steel. A five station wash metal preparation assures a perfect bonding surface for the finish coat of baked-on outdoor enamel. Removable panels permit complete service access to interior of cabinet. Conditioned air section of cabinet is lined with thick fiberglass insulation. Supply and return air openings have flanges for ease of duct connection. Heavy gauge steel support rails under base elevates unit above mounting surface. Drainage holes are provided in condenser coil section of the base for moisture removal. Electrical inlets are furnished in cabinet for wiring entry. Optional coil guards LB-34491B (3 per unit) are available for CHA10-650 model only.

**Refrigeration System** — Complete factory sealed refrigeration system consists of: compressor, condenser coil and fan(s), evaporator coil and blower, suction and discharge line service gauge ports, liquid line strainer, low pressure switch-automatic reset (CHA9-510 & CHA10-650 models), and a full operating refrigerant charge.

**Compressor and Controls Compartment** - Compressor and control box are located in a separate compartment of the cabinet, isolating them from the weather. Control box is conveniently located for service access with all controls factory installed and wired. Cabinet access panel removal permits complete access to the compartment.

**Dependable and Quiet Compressor** — Rugged and reliable compressor is hermetically sealed. Suction cooled, overload protected, and equipped with internal pressure relief valve. Internally protected from excessive current and temperature. The entire running gear is spring mounted within the sealed housing. In addition, the compressor is installed on resilient rubber mounts in the unit, assuring quiet and vibration free operation. CHA10-651-653 model is equipped with Lennox compressor.

**Large Evaporator and Condenser Coils** — Lennox designed and fabricated coils are constructed of precisely spaced ripple-edged aluminum fins machine fitted to copper tubes. Design of coil provides large surface and contact area for maximum efficiency. Fins are strengthened to resist bending which can restrict air flow and reduce efficiency. Fins are equipped with collars that grip tubing for maximum contact area resulting in excellent heat transfer. Flared shoulder tubing joints and silver soldering provide tight leak proof joints. Copper tubing construction provides maximum coil life and ease of service. Coil is thoroughly tested under pressure to insure leak proof construction.

**Drain Pan** — Evaporator coil drain pan is constructed of heavy gauge galvanized steel. Equipped with a galvanized pipe (mpt) drain outlet extended outside of the cabinet.

**Condenser Fan(s)** — Direct drive fan(s) moves large air volumes uniformly through the entire coil resulting in high refrigerant cooling capacity. CHA9-261 thru 410 models are equipped with a single fan. CHA9-510 models employ dual fans. Air enters unit through louvered top and both side panels and is discharged out through the coil.

The CHA10-650 model is equipped with a single direct drive fan. Air is drawn through the coil at both sides and end of the unit and discharged out vertically through the top panel. Corrosion resistant PVC coated steel wire fan guard is furnished as standard.

**Powerful Evaporator Blower** — Units are equipped with quiet operating direct drive blowers that deliver large air volumes with low power consumption. Each blower is statically and dynamically balanced as an assembly before it is installed in the unit. Multispeed motor is isolated on rubber mounts. A choice of blower speeds is available on each blower. See blower performance charts. Change in blower speed is easily accomplished by a simple change in wiring.

**Cleanable Air Filter** — One inch (25 mm) frame filters are furnished as standard equipment. Media is washable or vacuum cleanable polyurethane, coated with oil for increased efficiency. Use RP products filter coating No. 418 (order no. 30165) for reoilng. Separate filter access cabinet panel provides quick and easy removal for servicing.

**Thermostat (Optional)** — Thermostat is not furnished and must be ordered extra. For cooling only applications a single stage cooling thermostat is required. When optional additive electric heat is ordered a heating-cooling thermostat will be required.

**Additive Electric Heat (Optional)** — Available for factory installation in 3.5 thru 32.7 kw sizes. See Electric Heat tables. The helix wound nichrome heating elements are exposed directly in the air stream resulting in instant heat transfer, lower coil temperatures and long service life. The elements are accurately located and insulated from the heavy gauge steel support frame by high quality insulators. Heaters, except 575 volt models, are equipped with circuit breakers to provide overload and short circuit protection. Circuit breakers are current sensitive and temperature compensated to shutoff heater if current draw is excessive. Must be reset manually. Each set of heating elements is equipped with a accurately located limit control with fixed temperature off setting and automatic reset. In addition, elements have supplemental thermal cutoff safety fuses providing positive protection in case of hazardous overheating. Cutoff fuses are mounted external to the element face plate for quick and easy replacement. Thermal time delay relay brings the heating elements on and off the line, in sequence and equal increments, with a time delay between each element. Control box and access cover are constructed of heavy gauge galvanized steel. Electrical inlet holes are provided in the box. Electric heaters are completely factory assembled with all controls installed and wired.

**Timed-Off Control (Optional)** — Timed-off control (LB-50709BA) is available as optional equipment for field installation. Prevents compressor short-cycling and also allows time for suction and discharge pressure to equalize, permitting the compressor to start in an unloaded condition. Automatic reset control will shut the compressor off and hold it off for 5 minutes.

**Low Ambient Control (Optional)** — For low ambient temperature operation, a low ambient control kit (LB-50352BA) can be added in the field.

**Crankcase Heaters** — Compressor crankcase heater is furnished as standard equipment on CHA10-651-653 models. Crankcase heater is not furnished for the CHA9 models and must be ordered extra for field installation. Order number P-8-8852. Heaters prevent migration of liquid refrigerant into the compressor and ensures proper compressor lubrication at all times.

**Start Controls** — Furnished as standard on the CHA9-511 and CHA10-651. Start controls are not furnished on CHA9-261, 311, 411 model and must be ordered extra if required. Provides assistance for compressor start under loaded conditions or in the event of low voltage. Specify complete unit model number when ordering.

**Completely Tested and Certified** — Units have been thoroughly tested in the Lennox Research Laboratory environmental test room and accurately rated according to Air-Conditioning And Refrigeration Institute (ARI) Standard 210-81 conditions. In addition, units have been sound tested in the Lennox reverberant sound test room and rated according to ARI Standard 270-75. Units coming within the scope of the ARI standard (135,000 Btu/h 40 kW or less) are Certified under the ARI Certification Program. Air conditioning equipment and optional electric heaters are C.S.A. Listed. Units and components within are bonded for grounding to meet safety standards for servicing required by C.S.A. and C.E.C. Blower data is from unit tests conducted in the Lennox Laboratory air test chamber.

## ROOFTOP ACCESSORY EQUIPMENT

**Optional Duct Enclosure** — The RT10 duct enclosure is required for installation of the unit with the RMF9-65 roof mounting frame. The duct enclosure is also furnished as a standard component of the RD10-65 POWER SAVER assembly. Duct enclosure is completely insulated with a baked-on enamel finish and is shipped knocked down for field assembly. Supply and return air openings are located in the bottom of the enclosure. Field assembled return air plenum is furnished with enclosure. Insulated plenum connects to unit return air opening segregating return air within the enclosure.

**Optional POWER SAVER®** — The complete RD10-65 POWER SAVER and control system is shipped factory assembled and wired and field installs in the duct enclosure. The Lennox POWER SAVER system consists of: RT10-65 duct enclosure (field assembled), mechanically linked outdoor air and recirculated air dampers with pressure operated exhaust air dampers. The positioning of these dampers is accomplished by a 24 volt 3 position spring return damper motor with adjustable minimum damper positioner and controlled by the room thermostat, adjustable mixed air controller, adjustable compressor monitor and adjustable enthalpy control. The enthalpy control allows 0 to 100% outdoor air to be used for "free cooling" when outdoor humidity and temperature are acceptable. The Lennox POWER SAVER will co-operate with any heating-cooling thermostat. An outdoor air intake hood is furnished and field installs over the outdoor air dampers. Shipped knocked down, it is easily field assembled. A cleanable polyurethane media frame filter is furnished with the hood providing extra air filtering and bird screen protection.

**Optional RT10 Adapter Kit** — Adapter kit (LB-29475BB) includes filler panels and securing brackets to mate the duct enclosure and roof mounting frame to CHA9-261, CHA9-311 and CHA9-410 models.

**Optional Roof Mounting Frame** — The RMF9-65 roof mounting frame mates to the unit and duct enclosure providing an automatic weather sealed installation. A mounting frame deck enclosure is furnished to provide a weatherproof deck for mounting the unit on the roof mounting frame. Approved by National Roofing Contractors Association.

**Optional Minimum Fresh Air Damper** — OAD3-46/65 minimum fresh air damper mounts external to the RT10-65 duct enclosure. Equipped with manually operated damper and fittings for installing.

**Optional SP11 Remote Status Panel** — The operation of the unit can be checked on the Remote Status Panel (12F83) located within the conditioned area. Signal lights on the panel indicate "Cool Mode," "Heat Mode," "Compressor 1," "Compressor 2," "No Heat" and "Filter." The Cool Mode signal light is green when lit and indicates cooling operation. Heat Mode light is green and reflects heating operation and will turn red if there is an operational malfunction. Compressor 2 light is not required and should be disregarded. The No Heat and Filter lights will show red and indicate a requirement for service. Additional controls are required for use with the Status Panel and must be specified when ordering. Wiring Junction Box (14F92) is required to interface status panel with unit operation. Box field installs in unit. Filter switch kit (97C85) is used in conjunction with the Filter light. Operation of No Heat light with electric heat requires a Current Sensing Relay (29F79).

RMF9-65 ROOF MOUNTING FRAME WITH COMBINATION  
SUPPLY AND RETURN TRANSITION FOR RTD9-65 & FD9-65 DIFFUSERS

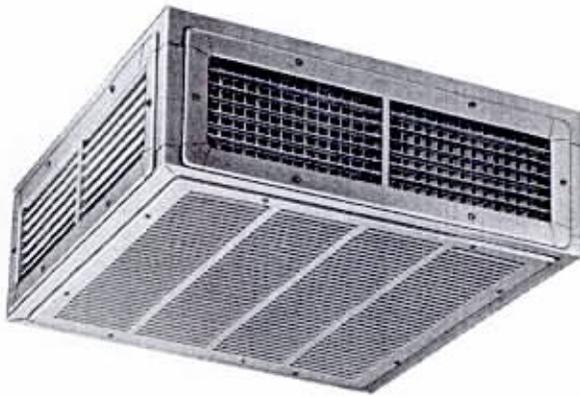

RTD AND FD COMBINATION CEILING SUPPLY AND RETURN AIR DISTRIBUTION

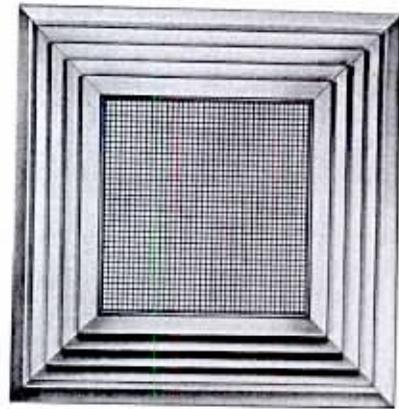

RMF9-65 ROOF MOUNTING FRAME WITH SUPPLY  
AND RETURN AIR OPENINGS FOR RTD & FD DIFFUSERS

## RTD-41, RTD-65 AND FD-41, FD-65 COMBINATION SUPPLY AND RETURN DIFFUSERS

**Optional RTD-41 & 65 Combination Ceiling Supply and Return Diffusers** — RTD-41 and RTD-65 step-down mount diffuser extends slightly below ceiling level when installed and discharges conditioned air out through grilles on all four sides. Grilles are fitted with double deflection louvers for precise directional control of air flow. Return air enters through the large center grille. Diffusers are completely factory assembled. Diffuser readily adapts to T-bar ceiling grids and plaster ceilings.

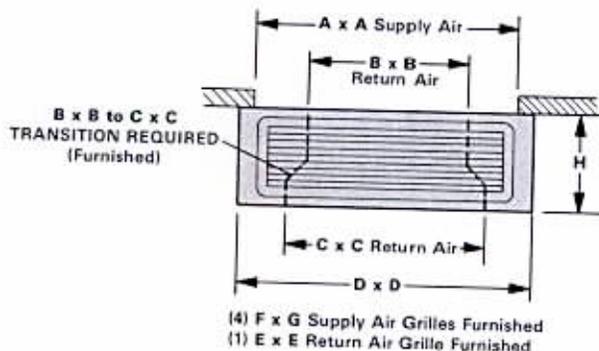

**Optional FD-41 & 65 Combination Ceiling Supply and Return Diffusers** — FD-41 and FD-65 flush mount diffuser installs almost flush with the ceiling level and discharges conditioned air out through fixed blade louvers on all four sides. Fixed blade louvers insure that air flow will be evenly distributed. FD-41-D and FD-65-D models are equipped with adjustable blade louvers for precise directional control of air flow. Diffusers are completely factory assembled. Diffuser readily adapts to T-bar ceiling grids and plaster ceilings.

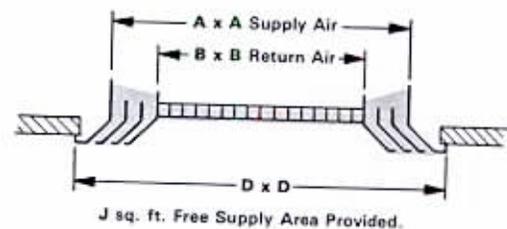

**Optional SRP9-65 Combination Supply And Return Plenum** — The SRP9-65 combination supply and return plenum adapts the RT10 duct enclosure to combination ceiling supply and return applications. The insulated plenum is field assembled and installs to bottom of the duct enclosure. Connecting duct from the plenum to the diffuser is not furnished and must be provided by the installer.

## RTD9-65 AND FD9-65 COMBINATION SUPPLY AND RETURN DIFFUSERS

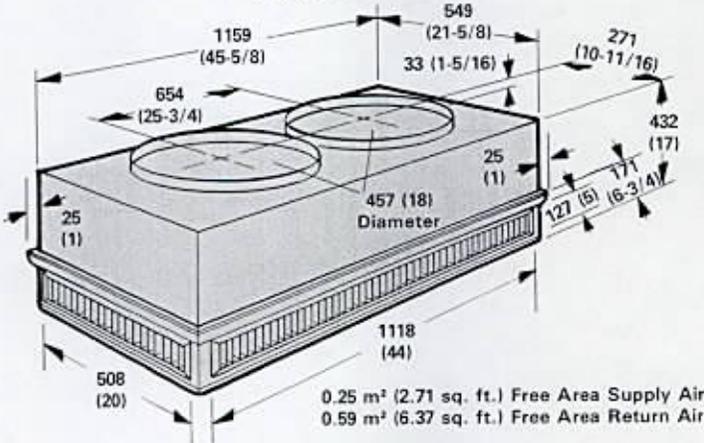

**Optional RTD9-65 Combination Supply and Return Diffuser Assembly** — RTD9-65 step-down mount diffuser extends slightly below ceiling level when installed and discharges conditioned air out through grilles on all four sides. Aluminum grilles are fitted with double deflection louvers for precise directional control of air flow. Return air enters through the large center grille. Assembly also includes insulated diffuser box with connection collars for round duct connection, hanging rings for suspending and molded fiberglass interior transition to insure low static and even air flow on all four sides. Transition is sealed internally to prevent recirculation. Diffuser assembly is completely factory assembled. Diffuser readily adapts to T-bar ceiling grids and plaster ceilings.

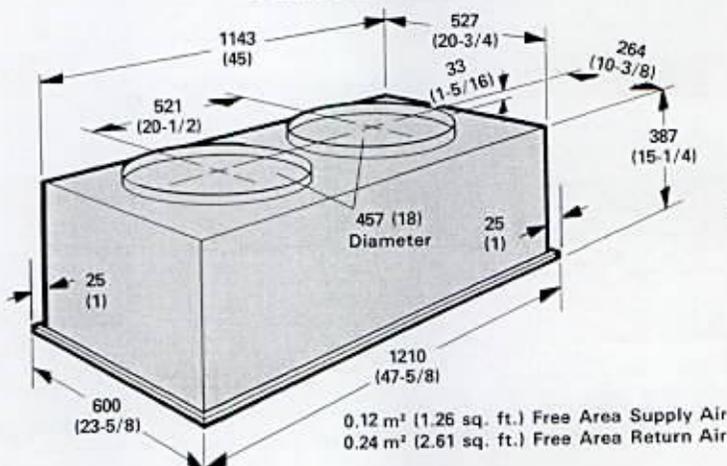

**Optional FD9-65 Combination Ceiling Supply and Return Diffuser Assembly** — FD9-65 flush mount diffuser installs almost flush with the ceiling level and discharges conditioned air out through fixed blade louvers on all four sides. Fixed blade louvers insure that air flow will be evenly distributed. Return air enters through large center grille. Assembly also includes insulated diffuser box with connection collars for round duct connection, support hanger eyelets at the top corners for secure installation and molded fiberglass interior transition to insure low static and even air flow on all four sides. Transition is sealed internally to prevent recirculation. Diffuser assembly is completely factory assembled. Diffuser readily adapts to T-bar ceiling grids and plaster ceilings.

### DIMENSIONS (inches) mm

#### RTD9-65 STEP-DOWN CEILING DIFFUSER

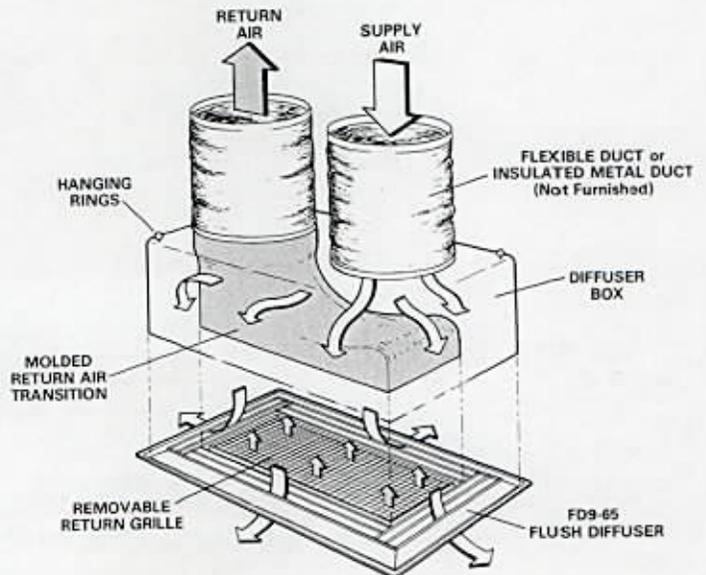

#### FD9-65 FLUSH CEILING DIFFUSER

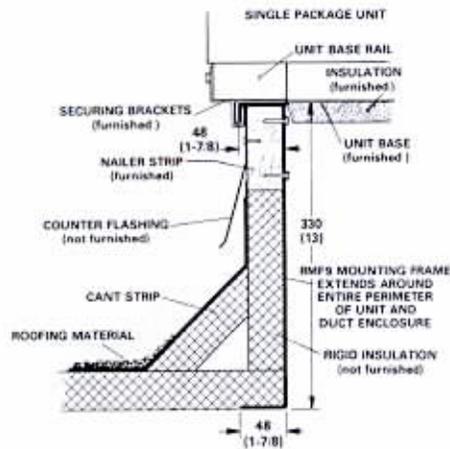

**Optional SRT10-65 Supply and Return Transition** — Transition field installs in the roof mounting frame and provides segregated and simple duct connections to supply and return diffuser. Completely insulated galvanized steel transition has collars for round duct connection. Round duct from the transition to the diffuser is not furnished and must be provided by the installer. Transition is completely factory assembled and easily field installs in the roof mounting frame with minimum costs and labor requirement.

NOTE — RT10 Duct Enclosure has no appreciable air resistance.

## GUIDE SPECIFICATIONS

Prepared for the guidance of architects, consulting engineers and mechanical contractors.

**General** — Furnish and install a single package air to air DX mechanical cooling system complete with automatic controls. The single package unit shall be a standard product of a firm regularly engaged in the manufacture of heating-cooling equipment. The manufacturer shall have parts and service available throughout Canada.

The installed weight shall not be more than . . . . . lbs. (kg). Entire unit shall have a width of not more than . . . . . inches (mm), a depth of not more than . . . . . inches (mm) and an overall height of not more than . . . . . inches (mm). The equipment shall be shipped completely factory assembled, precharged, piped and wired internally ready for field connections. In addition, manufacturer shall test operate system at the factory before shipment.

**Roof Mounting Frame** — Furnish and install a steel roof mounting frame. It shall mate to the bottom perimeter of the equipment. When flashed into the roof it shall make a unit mounting curb and provide weatherproof duct connection and entry into the conditioned area. Flashing shall be the responsibility of a roofing contractor. Frame shall be approved by National Roofing Contractors Association.

**Air Distribution** — Equipment shall be capable of end or bottom handling of conditioned air. All air distribution ducts shall be fiberglass or . . . . . ga. galvanized steel insulated with . . . . . inch (mm) thick . . . . . lb./ft<sup>2</sup> (kg/m<sup>2</sup>) density fiberglass or equivalent.

Furnish and install a (flush or stepdown) optional combination ceiling supply and return air grille. It shall be capable of not less than . . . . . ft. (m) radius of effective throw.

**Cooling System** — The total certified cooling capacity shall not be less than . . . . . Btuh (kW) with an evaporator air volume of . . . . . cfm (L/s), an entering wet bulb air temperature of . . . . . F (C), an entering dry bulb air temperature of . . . . . F (C) and a condenser entering temperature of . . . . . F (C). The compressor power input shall not exceed . . . . . kW at these conditions.

The coils shall be non-ferrous construction with aluminum fins mechanically bonded to durable copper tubes. Coils shall be pressure leak tested. Coil face area shall be not less than . . . . . sq. ft. (m<sup>2</sup>) (evaporator) and . . . . . sq. ft. (m<sup>2</sup>) (condenser).

The compressor shall be resiliently mounted, have overload protection, internal pressure relief and crankcase heater. The refrigeration system shall have suction and discharge line service gauge ports, liquid line strainer, low pressure switch and full refrigerant charge. Control options available shall consist of timed off control, low ambient control and start controls. Shall comply with ARI Standard 210 test conditions.

**Additive Electric Heaters** — The certified total heating capacity output shall be . . . . . Btuh (kW) with . . . . . kW input at . . . . . volts power supply.

**Approvals** — Single package unit shall be listed by a certified agency. All wiring shall be in compliance with CEC.

Optional electric heaters shall be factory installed. Heating elements shall be nichrome bare wired exposed directly to the air stream. Thermal time delay relay shall bring the elements on and off in sequence with a time delay between each element. Circuit breakers shall provide overload and short circuit protection. Safety devices shall consist of limit controls and thermal cutoff safety fuses. Heaters shall be C.S.A. Listed.

**Cabinet** — Shall be of galvanized steel with a baked-on outdoor enamel paint finish. Cabinet panels where conditioned air is handled shall be fully insulated to prevent sweating and minimize sound. Openings shall be provided for power connection entry. Base shall elevate unit off mounting surface.

**Service Access** — All components, wiring and inspection areas shall be completely accessible through removable panels.

**Air Movers** — Centrifugal conditioned air blower shall be direct driven by a multi-speed motor and be capable of delivering . . . . . cfm (L/s) at an external static pressure of . . . . . inches water gauge (Pa) requiring not more than . . . . . bhp (kW) and . . . . . rpm. Blowers shall be statically and dynamically balanced.

Propeller type condenser fan shall be direct driven by a . . . . . hp (kW) motor. Fan motor shall be permanently lubricated and inherently protected.

**Air Filters** — Cleanable filters furnished shall have not less than . . . . . sq. ft. (m<sup>2</sup>) of free area.

**Duct Enclosure** — Furnish and install an optional field assembled duct enclosure. Enclosure shall attach to the single package unit and mate to the roof mounting frame providing weatherproof duct connection and entry into the conditioned area. Brackets shall be provided to secure unit to frame. Enclosure shall be of galvanized steel with a baked-on outdoor enamel finish and shall be completely insulated.

**POWER SAVER** — Furnish and install complete with controls an optional duct enclosure with air mixing damper assembly including outdoor air and recirculated air dampers with pressure operated exhaust air dampers. The assembly shall mount within the confines of the duct enclosure and provide for the introduction of outside air for minimum ventilation and free cooling. Outdoor air intake hood shall include air filter. Damper motor shall be 24 volt, 3 position spring return. Controls shall include adjustable mixed air controller, adjustable compressor monitor and adjustable enthalpy control.

**Minimum Fresh Air Damper** — Optional fresh air damper shall be available to provide outdoor air requirements. Damper box field installs external to duct enclosure and shall be manually operated.

**Remote Status Panel** — Shall be available for installation within the conditioned area to observe equipment operation. The panel shall include signal lights for Cool Mode, Heat Mode, Compressor, No Heat and Filter.
