CHA9 UNIT

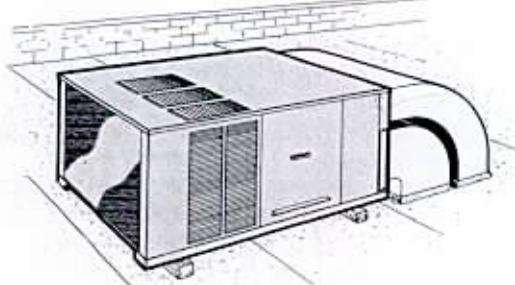

(With optional POWER SAVER®,
duct enclosure and mounting frame)

Reliability And High Efficiency Featured In Compact Single Package Air Conditioning Units

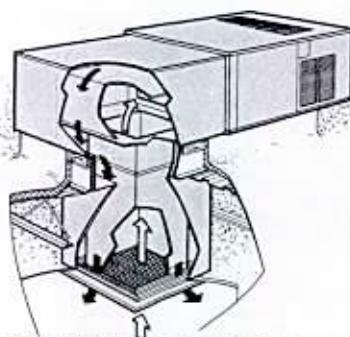

Lennox single package CHA9 series air conditioning units are designed for residential or small commercial installations. Five models are available with a wide and varied cooling capacity range. Units can be installed with ducts extended through a wall in a crawl space, basement, utility room or attic. Installation on a slab at grade level or on a rooftop will save valuable interior floor space. Optional accessories available for rooftop installations include a duct enclosure and roof mounting frame. The mounting frame mates to the bottom of the CHA9 and duct enclosure and when flashed into the roof permits weatherproof duct connection and entry into the conditioned area. Optional POWER SAVER® and controls field install in duct enclosure to reduce cooling operating costs and satisfy any local code fresh air requirements. Externally mounted optional minimum fresh air damper (manual) is also available. In addition, a supply and return plenum, fiberglass duct kit and choice of flush or step-down diffusers are available for a complete combina-

tion ceiling supply and return air distribution system. The CHA9 units contain all refrigeration components (evaporator and condensing unit), air movers, air filters and optional additive electric heat in one complete package. Optional electric heaters are available in several sizes for all season applications, space is provided in the unit for field installation. Evaporator supply and return air openings are both at the same end of the cabinet. Condenser air enters unit through louvered top panel and both side panels. Powerful direct drive fan(s) discharges air through condenser coil quietly and efficiently. Multispeed evaporator blower provides a choice of supply air flow. Large evaporator and condenser coils ensure maximum air contact and heat transfer. Cabinet is constructed of heavy gauge galvanized steel with a baked-on enamel finish. Units are shipped completely assembled and ready to install. In addition, units are test operated at the factory. Installer has only to locate unit, connect duct work and power supply to complete the installation.

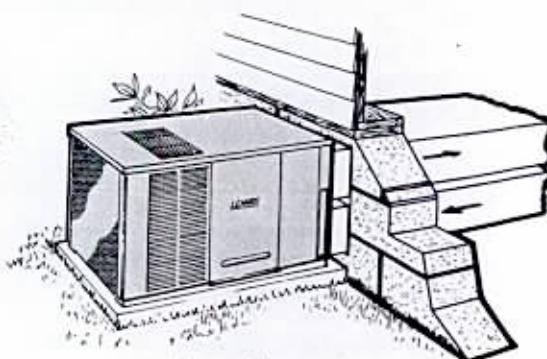

Typical Applications

Rooftop installation

Rooftop installation with optional RT9 duct enclosure
and combination ceiling supply and return air system.

Unit on slab at grade level

FEATURES

Rugged Cabinet — Constructed of heavy gauge galvanized hot dipped steel. A five station wash metal preparation assures a perfect bonding surface for the finish coat of baked-on outdoor enamel. Removable panels permit complete service access to interior of cabinet. Heavy gauge steel support rails under base elevates unit above mounting surface. Drainage holes are provided in condenser coil section of the base for moisture removal. Durable steel condenser coil grille guard is furnished as standard equipment. Grille protects coil from damage and permits quiet discharge of air with minimum resistance. Electrical inlets are furnished in cabinet for wiring entry. See dimension drawing.

Thick Interior Insulation — Evaporator section of the cabinet is lined with thick fiberglass insulation. This results in quiet and efficient operation due to the excellent acoustical and insulating qualities of fiberglass.

Duct Connection — Conditioned supply and return air openings are located one above the other on one end of the cabinet. Return air enters in the lower opening through the evaporator coil and is discharged out of the top opening. Both openings have flanges for ease of connecting duct work.

Refrigeration System — Complete factory sealed refrigeration system consists of: compressor, condenser coil and fan(s), evaporator coil and blower, suction and discharge line service gauge ports, liquid line strainer, low pressure switch-automatic reset (CHA9-510 and 650 models), refrigerant lines connected and a full operating charge of refrigerant.

Compressor and Controls Compartment — Compressor and control box are located in a separate compartment of the cabinet, isolating them from the weather and also keeping the sound level at a minimum. Control box is conveniently located for service access with all controls factory installed and wired. Cabinet access panel removal permits complete access to the compartment.

Dependable and Quiet Compressor — Rugged and reliable compressor is hermetically sealed. Suction cooled, overload protected, and equipped with internal pressure relief valve. Internally protected from excessive current and temperature. The entire running gear is spring mounted within the sealed can. In addition, the compressor is installed on resilient rubber mounts in the unit, assuring quiet and vibration free operation.

Large Evaporator and Condenser Coils — Lennox designed and fabricated coils are constructed of precisely spaced ripple-edged aluminum fins machine fitted to copper tubes. Design of coil provides large surface and contact area for maximum efficiency. Fins are strengthened to resist bending which can restrict air flow and reduce efficiency. Fins are equipped with collars that grip tubing for maximum contact area resulting in excellent heat transfer. Flared shoulder tubing joints and silver soldering provide tight leak proof joints. Coil is thoroughly tested under pressure to insure leak proof construction.

Drain Pan — Evaporator coil drain pan is constructed of heavy gauge galvanized steel. Equipped with a galvanized pipe (mpt) drain outlet extended outside of the cabinet. See dimension drawing for location.

Efficient Condenser Fan(s) — Direct drive fan(s) moves large air volumes uniformly through the entire coil resulting in high refrigerant cooling capacity. CHA9-261 thru 410 models are equipped with a single fan. CHA9-510 and 650 models employ dual fans. Air enters unit through louvered top and both side panels and is discharged out through the coil. See dimension drawing for air pattern.

Powerful Evaporator Blower — Units are equipped with quiet operating direct drive blowers that deliver large air volumes with low power consumption. Each blower is statically and dynamically balanced as an assembly before it is installed in the unit. Multispeed motor is isolated on rubber mounts. A choice of blower speeds is available on each blower. See blower performance charts. Change in blower speed is easily accomplished by a simple change in wiring.

Cleanable Air Filter — One inch frame filters are furnished as standard equipment. Media is washable or vacuum cleanable polyurethane, coated with oil for increased efficiency. Use RP products filter coating No. 418 (P-8-5069) when reoilng is required after cleaning. Separate filter access cabinet panel provides quick and easy removal of filter(s) for servicing.

Thermostat (Optional) — Thermostat is not furnished and must be ordered extra. For cooling only applications a single stage cooling thermostat is required. When optional additive electric heat is ordered a heating-cooling thermostat will be required.

Additive Electric Heat (Optional) — Available for field installation in 3.5 thru 33.0 kw sizes. See Electric Heat tables. The helix wound nichrome heating elements are exposed directly in the air stream resulting in instant heat transfer, lower coil temperatures and long service life. The elements are accurately located and insulated from the heavy gauge steel support frame by high quality insulators. Heaters are equipped with circuit breakers to provide overload and short circuit protection. Circuit breakers are current sensitive and temperature compensated to shutoff heater if current draw is excessive. Must be reset manually. Each set of heating elements is equipped with a accurately located limit control with fixed temperature off setting and automatic reset. In addition, elements have supplemental thermal cutoff safety fuses providing positive protection in case of hazardous overheating. Cutoff fuses are mounted external to the element face plate for quick and easy replacement. Thermal time delay relay brings the heating elements on and off the line in sequence and equal increments with a time delay between each element. Control box and access cover are constructed of heavy gauge galvanized steel. Electrical inlet holes are provided in the box. Electric heaters are completely factory assembled with all controls installed and wired.

Timed-Off Control (Optional) — Timed-off control (P-8-10238) is available as optional equipment for field installation. Prevents compressor short-cycling and also allows time for suction and discharge pressure to equalize, permitting the compressor to start in an unloaded condition. Automatic reset control will shut the compressor off and hold it off for 5 minutes.

Low Ambient Control (Optional) — Units will operate satisfactorily down to 50°F-55° outdoor air temperature without any additional controls. For cases where operation below 55°F-55°F is required a Low Ambient Control Kit (BM-3434) can be added in the field, enabling the unit to operate properly down to 0°F.

Crankcase Heaters (Optional) — Compressor crankcase heaters (P-8-8852) are available as optional equipment.

Thoroughly Tested And Approved — Units have been tested and rated in the Lennox Research Laboratory environmental test room according to ARI Standard 210 conditions and Certified under the ARI Certification Program. In addition, units have been sound tested in the Lennox reverberant sound test room and rated according to ARI Standard 270 conditions. Units coming within the scope of this standard (135,000 Btu/h or less) carry the ARI Certification Seal. Air conditioning equipment and optional electric heaters are U.L. Listed and listed by CSA as Certified. U.L. Listing is pending on 460 volt models. CSA Certification is pending on 460 and 575 volt models. Units and components within are bonded for grounding to meet safety standards for servicing required by U.L. and CEC. Blower data is from tests conducted in the Lennox Laboratory air test chamber.

ROOFTOP ACCESSORY EQUIPMENT

Optional Duct Enclosure — The RT9-65 duct enclosure is required for installation of CHA9 units with RMF9-65 roof mounting frame. For CHA9-261, 311 and 410 models an adapter kit (LB-29475B) is required to mate the units to the RT9-65. Duct enclosure is completely insulated and has a baked-on enamel finish. The enclosure is field assembled and secures to roof mounting frame and CHA9 unit. A mounting frame deck enclosure, included with RT9, provides a weatherproof deck for mounting the single package unit on the roof mounting frame. Securing brackets are provided to secure CHA9 unit to roof mounting frame. Supply and return air openings with flanges are provided in bottom of enclosure for connection of supply and return air ductwork in double duct applications. For combination ceiling supply and return applications the SRP9-65 plenum must be added to bottom of duct enclosure. Plenum facilitates connection of the supply and return air duct to the ceiling diffuser. Application flexibility is possible with the following options:

RT9-65 Duct Enclosure:

- With or Without PSD9-65 POWER SAVER®
- a — With SRP9-65 Combination Supply & Return Plenum
- b — With double duct distribution system

Optional POWER SAVER® — The entire PSD9-65 POWER SAVER control system is factory assembled and wired. The assembly field installs in the RT9-65 enclosure. The Lennox POWER SAVER system consists of: mechanically linked outdoor air and recirculated air dampers with pressure operated exhaust air dampers. The positioning of these dampers is accomplished by a 24 volt modulating spring return damper motor with adjustable minimum damper positioner and controlled by the room thermostat, adjustable mixed air controller, adjustable compressor monitor and adjustable enthalpy control. The enthalpy control senses the total heat content of the outdoor air. This unique control prevents excessive moisture laden outdoor air

that will add to the cooling load from entering the unit and yet permits cool dry air capable of cooling to enter, thus taking full advantage of free outdoor air for cooling. Fresh air intake section is furnished with cleanable polyurethane air filter.

Optional Roof Mounting Frame — The RMF9-65 roof mounting frame is available for mounting the RT9-65 duct enclosure and CHA9 units. Frame provides an automatic weather sealed rooftop installation. Approved by National Roofing Contractors Association.

Optional Combination Supply And Return Plenum — The SRP9-65 combination supply and return plenum adapts the RT9-65 duct enclosure to combination ceiling supply and return applications. The insulated plenum is field assembled and installs to bottom of the duct enclosure.

Optional Combination Supply And Return Diffusers — Lennox offers two different styles of air diffusers. The RTD stepdown model extends below ceiling level when installed. The FD model is almost flush with the ceiling when installed. Supply air is discharged through the outside grilles and return air enters through the center grille on both models. Adjustable supply air vanes are available, on both models, for air distribution.

Optional Supply And Return Duct — Supply and return fiberglass duct kit (BM-7820) provides connection of combination supply and return ceiling diffuser. Furnished in nominal 4 ft. lengths and constructed of 1" thick fiberglass duct board with an aluminum exterior. Shipped knocked down with the tape, staples and installing instructions for field assembly. See dimension drawings.

Optional Minimum Fresh Air Damper — Minimum fresh air damper mounts external to the RT9-65 duct enclosure. Equipped with manually operated damper and necessary fittings for installing.
