CHA8-953

(With optional POWER SAVER, electric heat and roof mounting frame)

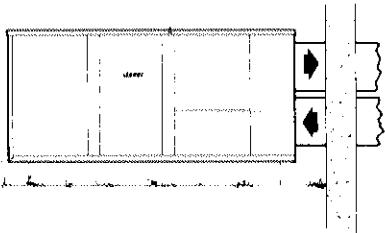

Typical Application

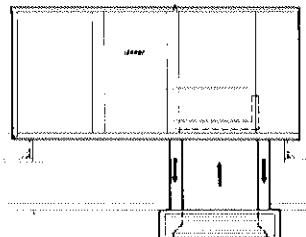

Rooftop Installation with Optional ZDB1 Blower Powered Mixing Damper Boxes.

Three Air Patterns Possible

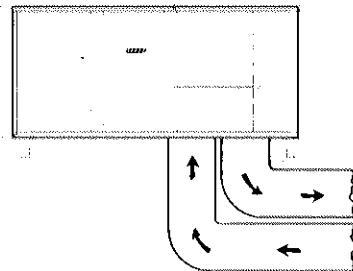

End panels fit bottom openings to give air pattern choice. Separate adapter required for combination ceiling supply and return application.

Installation thru the wall — Slab or Roof

Combination Supply and Return Air Ceiling Diffuser
Step-down or Flush Diffuser

Separate Supply and Return (Double) Duct

Single Package Rooftop Air Conditioner & Mounting Frame Saves Installation Costs & Floor Space

The CHA8 series DX air conditioning units, with bottom handling of conditioned air, are designed primarily for rooftop installation with the optional POWER SAVER™ and RMF3 roof mounting frame. The separate roof frame mates to the bottom of the CHA8 unit and when flashed into the roof it permits weatherproof duct connection and entry into the conditioned area. No additional roof curbing or flashing is required. The single package unit can also be installed on a slab at grade level with end handling of conditioned air. The insulated single cabinet houses highly efficient air cooled DX cooling, powerful belt drive blowers, air filters, optional electric heat and the optional POWER SAVER dampers which are shipped complete with all controls wired. Complete factory sealed refrigeration system consists of compressor(s), con-

denser coil and fans, evaporator coil and twin blowers, refrigerant drier, refrigerant lines connected and a full charge of refrigerant. Controls furnished consist of pressure switches, compressor relay, overload protection and timed-off cycle. Optional POWER SAVER equipment and controls reduce cooling operating costs and satisfy any local code fresh air requirements. An externally mounted OAD3 minimum fresh air damper (manual or auto) is also available. In addition optional ZDB1 series blower powered mixing damper boxes are available for zone control system installations. Units are shipped completely assembled wired and piped ready to install. Each unit is test operated at the factory insuring proper operation. Installer has only to set unit, connect ductwork, power supply and thermostat field wiring connections.

FEATURES

Thoroughly Tested And Approved — Units have been thoroughly tested in the Lennox environmental test room and rated at ARI Standard 210 conditions. In addition the CHA8-953 & 1353 models have been sound tested in the Lennox reverberant sound test room and rated according to ARI Standard 270. Units coming within the scope of this standard (135,000 Btuh or less) carry the ARI Certification Seal and are certified under the ARI Certification Program. Units and components within are bonded for grounding to meet safety standards for servicing required by U.L. and NEC. Units and optional electric heaters are U.L. Listed. Units are also CSA Approved.

Dependable Lennox Compressor(s) — The large casing, spring loaded discharge valve, high suction intake ports and crankcase heater result in effective "slugging" protection. Crankshaft is statically and dynamically balanced and has patented 3 mode oil pumping for positive pressure lubrication. Contoured piston for increased volumetric efficiency. 17 strategically located discharge mufflers result in extremely quiet operation. Motor is located within refrigerant flow pattern resulting in low motor winding temperatures. Twin internally mounted motor in-winding temperature sensing thermostats provide safe operation. High and low pressure controls (automatic reset) are provided and factory installed in compressor terminal box. A low ambient cut-out thermostat prevents compressor operation below 22°F. The entire running gear assembly is spring mounted within the sealed housing and the compressor is installed in the unit on resilient rubber mounts assuring quiet and vibration free operation.

CHA8-953 and CHA8-1353 — Models have a single Lennox L2 compressor in a single refrigeration system giving single stage cooling operation.

CHA8-1853 And CHA8-2753 — Models have twin Lennox L2 compressors in separate refrigeration systems and two stage operation is controlled by the two stage cooling thermostat.

Lennox Coils — Extra large coils (condenser and evaporator) are constructed of ripple-edged aluminum fins machine fitted to copper tubes for maximum strength and heat transfer. Coils are pressure leak tested at 450 to 500 psi.

Efficient Condensing Section — Direct drive fans draw large air volumes through the extra large condenser coil(s) and discharges the air out the top. Condenser coil(s) have sub-cooling rows for increased efficiency. Condenser discharge grille is furnished.

Powerful Blowers — Twin resiliently mounted blowers deliver large air volumes with low power consumption. Rugged blower motor support allows quick belt adjustment and motor change over.

Cleanable Air Filters — Washable, vacuum cleanable polyurethane filter media is furnished as standard. Filters are easily accessible for cleaning and are coated with oil for increased efficiency. Use RP products filter coating No. 418 (P-8-5069) when reoiling. One inch frame filter is standard, filter rack will receive up to 2" filters.

Rugged Cabinet — Heavy gauge galvanized hot dipped steel cabinet panels. A five station wash metal preparation assures a perfect bonding surface for the finish coat of baked-on enamel. Large removable panels provide complete service access.

Thick Interior Insulation — All of the interior panels where conditioned air is handled and the entire bottom of unit is insulated with thick fiberglass insulation.

Optional POWER SAVER (Fresh Air) — Available factory or field installed. The Lennox POWER SAVER system consists of: mechanically linked outdoor air, recirculated air and exhaust air dampers. The positioning of these dampers is accomplished by a 24 volt modulating spring return damper motor and controlled by the room thermostat, adjustable mixed air controller, adjustable compressor monitor and enthalpy control. The enthalpy control senses the total heat content of the outdoor air. This unique control prevents excessive moisture laden outdoor air that will add to the cooling load from entering the unit and yet permits cool dry air capable of cooling to enter, thus taking full advantage of free outdoor air for cooling. For field installation the two damper sections simply slide in cavities provided in the unit cabinet. Equipment is shipped factory wired and only requires simple plug-in connection for operation. Fresh air intake section is furnished with cleanable polyurethane air filters. See Accessories table for ordering data.

Optional Low Ambient Controls — System will operate satisfactorily down to 35°F outdoor air temperature without additional controls. If air conditioning operation is required at outdoor air temperatures colder than 35°F a field installed low ambient control kit is required. See Accessories table for ordering.

Optional Hot Gas Bypass Kit — CHA8-953 and 1353 models only. Contain necessary valves and fittings for adding hot gas bypass to refrigeration system. See Accessories table for ordering data.

Optional End Supply & Return Air Discharge Kit — Available for the CHA8-1853 and 2753 models for field conversion from bottom supply and return air handling to end supply and return air pattern. Kit contains divider panel(s), fasteners and instructions. See Accessories table for ordering data. CHA8-953 and 1353 models are converted by relocating bottom opening divider to end of unit.

Optional Thermostat — Thermostat is not furnished and must be ordered extra. For cooling only applications a single stage cooling thermostat is required for CHA8-953 and CHA8-1353 models; a two stage cooling thermostat is required for CHA8-1853 and CHA8-2753 models. When optional electric heat is ordered a heating-cooling thermostat is required. The heating portion may be two stage on most models. For two stage electric heat operation an additional relay (order no. P-8-3251) is required and must be ordered extra.

Optional Minimum Fresh Air Damper — Externally mounted OAD3 fresh air damper section complete with cleanable polyurethane air filters is available. See Accessories table for ordering. It can be either manually or automatically controlled with a damper motor.

Optional Electric Heat — Available factory or field installed. See Electric Heat table for capacities and models available. Electric heat section installs downstream from evaporator coil on the CHA8-953 and 1353 and upstream from the coil on the CHA8-1853 and 2753. The heating elements are helix wound nichrome wire exposed to the air stream for instant heat transfer, lower coil temperatures and longer heater life. The elements are accurately located and insulated from the plated supporting frame by high quality insulators.

Optional Combination Supply and Return Diffusers — Lennox offers two different styles of air diffusers. The RTD step-down model extends below the ceiling level and discharges conditioned air out through grilles on all four sides. The FD model installs almost flush with the ceiling and discharges air down and out through the outside vanes. Both models are equipped with adjustable vanes for distribution and diffusion of conditioned air. Return air enters through the center grille on both models.

Optional Nite Setback Controls — A nite thermostat (P-8-8899), subbase (P-8-8889) and adaptor plate (P-8-8954) (to adapt to vertical outlet box) is available. Two nite setback kits are provided: BM-4762 includes a manual nite setback switch and stainless steel mounting plate. Kit BM-4761 includes a manual set 12 hour nite setback timer and a stainless steel mounting plate. Mounting plate mounts to two standard electrical outlet boxes furnished by installer. An optional 24 hour skip day clock (P-8-3744 with carryover or P-8-4168 less carryover) to program the unit automatically is available. Clock is recommended to be used with the BM-4761 kit and is optional for use with kit BM-4762. In addition, a 7 day time clock (P-8-6858 less carryover or P-8-10213 with carryover) is also available as an option.

Optional Roof Mounting Frame — Durable and serviceable frame is 13 inches high. It sets on the roof support members and is actually built into the roof structure. The top mates to the CHA8 base. A securing bolt kit (BM-6909), containing bolts to secure unit to frame, is available as optional equipment and must be ordered extra.

Optional Remote Readout Panel — Readout Panel (BM2-5358) and Rough-in Box (BM1-5385) must be ordered extra. See bulletin (page 71) in Accessories Section. When panel is used for nite setback operation the following controls must be used and ordered extra: nite thermostat (P-8-8899), subbase (P-8-8889), adaptor plate (P-8-8954) and 24 hour skip-day clock (P-8-3744 with carryover or P-8-4168 less carryover). A 7 day time clock (P-8-6858 less carryover or P-8-10213 with carryover) is also available as an option.

Optional Blower Powered Mixing Damper Boxes — ZDB1 series mixing air boxes with a cfm range of 270 to 1900 are available for zone control system applications. Units install in the duct system within the structure. For data see Accessories section, page 7.

| | | | 480 | 56.4 | 192,500 | | | |

NOTE — Cooling only or Heating-Cooling applications require only one disconnect switch. See field wiring diagram.
NOTE — Time fuses for sub-fusing of CHA8 unit not furnished.

*Refer to National Electric Code manual to determine wire, fuse and disconnect size requirements.

*May be two stage controlled.

RMF3 ROOF MOUNTING FRAME

Frame Specifications

Roof Mounting frame is rigid enough to be spanned over its entire length or cantilevered if supported on either side of the center of gravity. The side joint plate must be welded to the RMF3-185/275 frame if it is spanned more than 80 inches or cantilevered more than 40 inches.

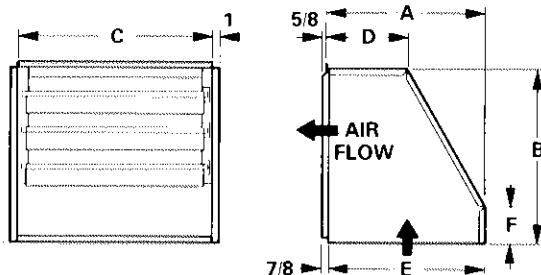

| Mounting Frame Height | 13 inches |
|---|-----------------------|
| Frame moment of inertia (I) | 70 in. ⁴ |
| Frame section modulus ($\frac{I}{C}$) | 10.8 in. ³ |
| Mounting frame weight (foot of length) | 5.3 |
| Mounting frame design strength (psi) | 20,000 |

| Model No. | Roof Mounting Frame | A | B | D | E | F | G |

| NOTE — Extremes of operating range are plus and minus 10% of line voltage. | | | | | | | | | | | | | |

CHA8-1853 AND CHA8-2753 COOLING AND ELECTRIC HEAT

CHA8-953 AND CHA8-1353 COOLING AND ELECTRIC HEAT CHA8-1853 AND CHA8-2753 COOLING ONLY

NOTE — Connect main power supply to disconnect box with largest rating.

All wiring must conform to NEC and local electrical codes.

If local electrical code permits may be class 2 wiring.

- A — *Three wire low voltage (Single Stage Cool Only)
- *Four wire low voltage (Two Stage Cool Only)
- (Single Stage Cool and Single Stage Heat)
- *Five wire low voltage (Single Stage Cool and Two Stage Heat)
- (Two Stage Cool and Single Stage Heat)
- *Six wire low voltage (Two Stage Cool and Two Stage Heat)

*If POWER SAVER and Nite Setback controls are used one additional wire is required.

B — Three wire power (See Electrical Data Table)

C — Two wire low voltage

D — Two wire low voltage (Without POWER SAVER)

Three wire low voltage (With POWER SAVER)

Additional field wiring is not required when POWER SAVER is used. All wiring is provided in CHA8 and in POWER SAVER, simply make plug-on connections to complete job for field installations.

GUIDE SPECIFICATIONS

General — Furnish and install a one piece air to air DX mechanical cooling system complete with automatic controls. The installed weight shall not be more than lbs. The equipment shall be shipped completely factory assembled, precharged, piped and wired internally ready for field connections. In addition manufacturer shall test operate system at the factory before shipment.

Roof Mount Frame — Furnish and install a steel roof mounting frame. It shall mate to the bottom perimeter of the equipment. When flashed into the roof it shall make a unit mounting curb and provide weatherproof duct connecting and entry into the conditioned area.

Air Distribution — Equipment shall be capable of (end or bottom) handling of conditioned air.

Furnish and install a (flush or stepdown) combination ceiling supply and return grille. It shall be capable of not less than . . . ft. radius of effective throw.

Power Saver (Fresh Air Dampers) — Furnish and install complete with all controls an air mixing damper assembly including fresh air, recirculated air and exhaust air dampers. The fresh air section shall be equipped with cleanable air filters. The assembly shall mount within the confines of the CHA8 casing.

Cooling System — The total certified cooling capacity shall not be less than Btuh with air evaporator air volume of cfm, an entering wet bulb air temperature of . . . F, an entering dry bulb air temperature of . . . F and a condenser entering air temperature of . . . F. The total compressor power input shall not exceed Kw at the above conditions. The coils shall be non-ferrous construction with aluminum fins mechanically bonded to seamless copper tubes. Condenser coil shall have sub-cooling rows.

The compressor shall be resiliently mounted, have built-in 3 mode crankshaft lubrication, crankcase heater, discharge temperature limiter, current and temperature sensing motor overloads.

The cooling system shall be protected by high and low pressure switches and a five minute compressor timed off cycle controller.

Heating System — Furnish and install a nichrome bare wire electric heat section of Kw capacity. They shall be equipped with fusible links. Sections having more than one circuit shall be step started in 40 second increments per circuit.

Air Movers — Twin centrifugal conditioned air blowers shall have permanently lubricated ball bearings, adjustable belt drives and be capable of delivering cfm at an external static pressure of inches water gauge requiring not more than bhp and rpm. The condenser fans shall be direct driven. All motors shall have inherent protection devices.

Frame and Casing — The frame shall be welded construction. The casing shall be of galvanized panels with a baked on outdoor enamel finish. The entire bottom of cabinet shall be insulated with 1" thick fiberglass insulation. Cabinet panels shall be insulated with not less than 1-1/2" thick fiberglass.

Air Filters — Cleanable filters furnished shall have not less than . . . sq. ft. of free area.

Service Access — All components, wiring and inspection areas shall be completely accessible through removable panels.

Blower Powered Mixing Damper Boxes — Shall be available for zone control system applications. Furnish and install complete with controls an air mixing blower powered unit including conditioned air dampers, recirculated air dampers and direct drive blower(s). Capable of delivering Cfm at an external static pressure of inches water gauge. The blower powered unit shall install in the duct system within the structure.
